TPC Benchmark™ C

Full Disclosure Report for

PRIMERGY F200

Using Microsoft SQL Server 2000 Enterprise Edition

and Microsoft Windows 2000 Server

October 25, 2001

First Edition

First Edition October 25, 2001

Fujitsu Siemens believes that the information in this document is accurate as of the publication date. The information in this document is subject to change without notice. We assume no responsibility for any errors that may appear in this document. The pricing information in this document is believed to accurately reflect the current prices as of the publication date. However, we provide no warranty of the pricing information in this document.

Benchmark results are highly dependent upon workload, specific application requirements, system design and implementation. Relative system performance will vary as a result of these and other factors. Therefore, TPC Benchmark™ C should not be used as a substitute for a specific customer application benchmark when critical capacity planning and/or product evaluation decisions are contemlated.

All performance data contained in this report were obtained in a rigorously controlled environment. Results obtained in other operating environments may vary significantly. We do not warrant or represent that a user can or will achieve similar performance expressed in transactions per minute (tpmC) or normalized price/performance (€/tpmC). No warranty of system performance or price/performance is expressed or implied in this report.

Preface

The Transaction Processing Performance Council (TPC), of which Fujitsu Siemens Computers GmbH is a member, is an organization of computer companies, dedicated to the development of objective, industry-wide performance metrics in the area of transaction processing. Fujitsu Siemens Computers GmbH is involved in this effort, participating on the council and utilizing TPC benchmarks in performance evaluation.

The TPC Benchmark™ C Standard Specification was developed by the Transaction Processing Performance Council. This benchmark exercises the system components necessary to perform tasks associated with that class of on-line transaction processing (OLTP) environments emphasizing a mixture of read-only and update intensive transactions. This is a complex OLTP application environment exercising a breadth of system components associated by such environments characterized by:

- The simultaneous execution of multiple transaction types that span a breadth of complexity
- On-line and deferred transaction execution modes
- Multiple on-line terminal sessions
- Moderate system and application execution time
- Significant disk input/output
- Transaction integrity (ACID properties)
- Non-uniform distribution of data access through primary and secondary keys
- Databases consisting of many tables with a wide variety of sizes, attributes, and relationships
- Contention on data access and update

This benchmark defines four on-line transactions and one deferred transaction, intended to emulate functions that are common to many OLTP applications. However, this benchmark does not reflect the entire range of OLTP requirements. The extent to which a customer can achieve the results reported by a vendor is highly dependent on how closely TPC-C approximates the customer application. The relative performance of systems derived from this benchmark does not necessarily hold for other workloads or environments. Extrapolations to any other environment are not recommended.

Benchmark results are highly dependent upon workload, specific application requirements, system design and implementation. Relative system performance will vary as a result of these and other factors. Therefore, TPC-C should not be used as a substitute for a specific customer application benchmarking when critical capacity planning and/or product evaluation decisions are contemplated.

The performance metric reported by TPC-C is a "business throughput" measuring the number of orders processed per minute. Multiple transactions are used to simulate the business activity of processing an order , and each transaction is subjected to a response time constraint. The performance metric for this benchmark is expressed in transactions-per-minute-C (tpmC). To be compliant with the TPC-C standard, all references to tpmC results must include the tpmC rate, the associated price-per-tpmC, and the availability date of the priced configuration.

Summary

This report documents the TPC Benchmark™ C results achieved by the Fujitsu Siemens Computers GmbH using Microsoft SQL Server 2000 Enterprise Edition SP1 .

The TPC Benchmark™ C tests were run on a PRIMERGY F200 system using the Windows 2000 Server SP2 operating system.

The results, summarized below, show the number of TPC Benchmark™ C transactions per minute (tpmC) and the price per tpmC (€/tpmC).

Prices used in TPC bechmarks reflect the actual prices a customer would pay for a one-time purchase of the stated components. Individually negotiated discounts are not permitted. Special prices based on assumptions about past or future purchases are not permitted. All discounts reflect standard pricing policies for the listed components. For complete details, see the pricing section of the TPC benchmark pricing specifications. If you find that the stated prices are not available according to these terms, please inform the TPC at pricing@tpc.org. Thank you.

Contents

Introduction

This is the Full Disclosure Report for the TPC Benchmark™ C running on the Fujitsu Siemens Computers system PRIMERGY F200. It meets the requirements of the TPC Benchmark™ C Standard Revision 5.0.

System Overview	*This report documents the compliance of the Fujitsu Siemens Computers GmbH TPC Benchmark™ C tests using Microsoft SQL Server 2000 Enterprise Edition SP1 Relational Database Management System.*

The TPC Benchmark™ C tests were carried out on a PRIMERGY F200. The PRIMERGY F200 is a powerful Server with a motherboard based on the ServerWorks chipset that holds up to 2 Intel Pentium® III 1266 MHz processors with 512 KB L2 cache. The system was equipped with 4 GB of ECC SDRAM memory. 3 of the 6 PCI-Slots were used for SCSI RAID controllers.
The client machines were 2 PRIMERGY B210 with 1 Intel Pentium® III 933 MHz. They all included 512 MB ECC SDRAM memory and 1 Intel Pro/100+ ethernet adapter.

The server operating system was Windows 2000 Server SP2. The client operating system was Windows 2000 Server SP2.

Full Disclosure	*From Clause 8.1 of the TPC Benchmark™ C Standard Specification:* The intent of this disclosure is for a customer to be able to replicate the results of this benchmark given the appropriate documentation and products.

Fujitsu Siemens Computers believes that this full disclosure report meets the stated intention. Fujitsu Siemens Computers has strived to maintain the integrity of the Specification by adhering not only to the letter of the Specification, but also to its spirit.

Report Format	*The format of this document follows Clause 8 of the TPC Benchmark™ C specification (*TPC Benchmark™ C Standard Specification, *Revision 5.0, Transaction Processing Performance Council) which describes the full disclosure report requirements for the test.*

Each section of this report begins with the specification requirement printed in *italic type*. It is followed by plain type text that explains how the test complies with the requirement. Sections which require extensive listings reference appropriate appendices.

Report organization**:**

- General Items
- Clause 1 Related Items - Logical Database Design
- Clause 2 Related Items - Transaction and Terminal Profiles
- Clause 3 Related Items - Transaction and System Properties
- Clause 4 Related Items - Scaling and Database Population
- Clause 5 Related Items - Performance Metrics and Response Time
- Clause 6 Related Items - SUT, Driver, and Communication Definition
- Clause 7 Related Items - Pricing
- Clause 8 Related Items - Audit
- Appendix A - Application Source Code
- Appendix B - Database Details
- Appendix C - Tunable Parameters and Options
- Appendix D – Space Calculation
- Appendix E - Price Quotations
- Appendix F - Attestation Letter

Additional Copies	*Additional copies of this report are available upon request from Fujitsu Siemens Computers GmbH:* *Fujitsu Siemens Computers* *ES PS DS 5* *PRIMERGY Server Performance Lab* *Mr. Bathe* *Heinz-Nixdorf-Ring 1* *33106 Paderborn* *Germany*

1. General Items

1.1 **Application Code**	*The application program (as defined in Clause 2.1.7) must be disclosed. This includes, but is not limited to, the code implementing the five transactions and the terminal input and output functions. [Clause 8.1.1.4]*

The source code of the application program is provided in Appendix A - Application Source Code.

1.2 **Benchmark Sponsor**	*A statement identifying the benchmark sponsor(s) and other participating companies must be provided. [Clause 8.1.1.5]*

This benchmark was sponsored and executed by Fujitsu Siemens Computers GmbH.
The benchmark was developed and engineered by Fujitsu Siemens Computers GmbH and Microsoft Corporation.
Testing took place at Fujitsu Siemens Computers PRIMERGY benchmark laboratories in Paderborn, Germany.

1.3 **Parameter Settings**	*Settings must be provided for all customer-tunable parameters and options which have been changed from the defaults found in actual products, including but not limited to:* • *Database tuning options.* • *Recovery/commit options.* • *Consistency/locking options.* • *Operating system and application configuration parameters.* *[Clause 8.1.1.6]*

The significant parameters and system configuration files are provided in Appendix C - Tunable Parameters and Options.

1.4 **Configuration Diagrams**	*Diagrams of both measured and priced configurations must be provided, accompanied by a description of the differences. This includes, but is not limited to:* • *Number and type of processors.* • *Size of allocated memory, and any specific mapping/partitioning of memory unique to the test.* • *Number and type of disk units (and controllers, if applicable).* • *Number of channels or bus connections to disk units, including their protocol type.* • *Number of LAN (e.g., Ethernet) connections, including routers, workstations, terminals, etc., that were physically used in the test or are incorporated into the pricing structure (see Clause 8.1.8).* • *Type and the run-time execution location of software components (e.g., DBMS, client processes, transaction monitors, software drivers, etc.).* *[Clause 8.1.1.7]*

Table 1: SUT Configuration PRIMERGY F200

2. Clause 1 Related Items - Logical Database Design

2.1 Table Definitions	*Listings must be provided for all table definition statements and all other statements used to set-up the database. [Clause 8.1.2.1]*

The programs that defined, created, and populated the Microsoft SQL Server 2000 Enterprise Edition SP1 database for this TPC benchmark™ C are listed in Appendix B - Database Details.

2.2 Physical Organization of Database	*The physical organization of tables and indices, within the database, must be disclosed. [Clause 8.1.2.2]*

Table 3: Physical Organization of the Database

Controller	Channel 0	Channel 1	Channel 2	Channel 3	RAID	Drive
eXtremeRAID 2000 #0	0-0 1-0 2-0 3-0	0-1 1-1 2-1 3-1			SPAN 0 to 1 RAID1	L:
eXtremeRAID 2000 #1	0-0 0-1 0-2 0-3 0-4 0-5 0-6 0-8 0-9 0-10 0-11 0-12	1-0 1-1 1-2 1-3 1-4 1-5 1-6 1-8 1-9 1-10 1-11 1-12	2-0 2-1 2-2 2-3 2-4 2-5 2-6 2-8 2-9 2-10 2-11 2-12	3-0 3-1 3-2 3-3 3-4 3-5 3-6 3-8 3-9 3-10 3-11 3-12	SPAN 0 to 3 RAID0	E: N: X:
eXtremeRAID 2000 #2	0-0 0-1 0-2 0-3 0-4 0-5 0-6 0-8 0-9 0-10 0-11 0-12	1-0 1-1 1-2 1-3 1-4 1-5 1-6 1-8 1-9 1-10 1-11 1-12	2-0 2-1 2-2 2-3 2-4 2-5 2-6 2-8 2-9 2-10 2-11 2-12	3-0 3-1 3-2 3-3 3-4 3-5 3-6 3-8 3-9 3-10 3-11 3-12	SPAN 0 to 3 RAID0	F: O: Y:

All controllers were configured with write cache disabled. Write cache was enabled on the log drives and disabled on the data drives. Disk types are Seagate ST318451LC 18 GB with 15000 rpm.

Space was allocated to Microsoft SQL Server 2000 Enterprise Edition SP1 on SUT disks according to the data in section 5.2. The size of the datafile on each disk drive was calculated to provide even distribution on load across the disk drives. The Windows Disk Manager was used to create raw devices for data/log and NTFS partitions for dump devices. For further information see Appendix B (Disk Usage) and Figure 4 in 5.2 (Distribution of Tables and Log). No attempt was made to alter the default physical organization of the database tables and indices chosen by Microsoft SQL Server 2000 Enterprise Edition SP1 .

2.3 Insert and Delete Operations	*It must be ascertained that insert and/or delete operations to any of the tables can occur concurrently with the TPC-C transaction mix. Furthermore, any restriction in the SUT database implementation that precludes inserts beyond the limits defined in Clause 1.4.11 must be disclosed. This includes the maximum number of rows that can be inserted and the maximum key value for these new rows. [Clause 8.1.2.3]*

There were no restrictions on insert and delete operations to any tables.

2.4 Database Partitioning	*While there are a few restrictions placed upon horizontal or vertical partitioning of tables and rows in the TPC benchmark™ C (see Clause 1.6), any such partitioning must be disclosed. [Clause 8.1.2.4]*

There was no partitioning used in this implementation.

2.5 Replication of Tables	*Replication of tables, if used, must be disclosed (see Clause 1.4.6). [Clause 8.1.2.5]*

Replication of tables was not used in this implementation.

2.6 Additional and/or Duplicated Attributes	*Additional and/or duplicated attributes in any table must be disclosed along with a statement on the impact on performance (see Clause 1.4.7). [Clause 8.1.2.6]*

No additional and/or duplicated attributes were used.

3. Clause 2 Related Items - Transaction and Terminal Profiles

3.1 Random Number Generator	*The method of verification for the random number generation must be described. [Clause 8.1.3.1]*

The random number generation was done in Microsoft BenchCraft, which was audited independently.

3.2 Input/Output Screen Layout	*The actual layouts of the terminal input/output screens must be disclosed. [Clause 8.1.3.2]*

The screen layout corresponded exactly to those of the TPC-C Standard Specification (specified in Clause 2.4.3, 2.5.3, 2.6.3, 2.7.3, and 2.8.3).

3.3 Configured Terminal Features	*The method used to verify that the emulated terminals provide all the features described in Clause 2.2.2.4 must be explained. Although not specifically priced, the type and model of the terminals used for the demonstration in 8.1.3.3 must be disclosed and commercially available (including supporting software and maintenance). [Clause 8.1.3.3]*

All of the requirements in clause 2.2.2.4. are supported. This was verified by manually exercising each specification on a PRIMERGY 870.

3.4 Presentation Managers or Intelligent Terminals	*Any usage of presentation managers or intelligent terminals must be explained. [Clause 8.1.3.4]*

Application code running on the client machines implemented the TPC-C user interface. No presentation manager software or intelligent terminal features were used. The source code for the forms application is listed in Appendix A - Application Source Code.

3.5 Transaction Statistics	*The numerical quantities which are required are listed in the following table. [Clause 8.1.3.5 to 8.1.3.11]*

Table 4: Transaction Statistics

	Statistics	Percentage
New-Order	Home order-lines	99.00%
	Remote order-lines	1.00%
	Rolled back transactions	0.99%
	Average items per order	10.00
Payment	Home transactions	85.00%
	Remote transactions	15.00%
	Non-primary key access	60.00%
Order-Status	Non-primary key access	60.06
Delivery	Skipped transactions	0
Transaction Mix	New-Order	44.89 %
	Payment	43.03 %
	Order-Status	4.01 %
	Delivery	4.04 %
	Stock-Level	4.03 %

3.6 Queueing Mechanism	*The queuing mechanism used to defer the execution of the Delivery transaction must be disclosed. [Clause 8.1.12]*

Deferred deliveries are queued by making an entry in an array within the client application process (tpcc.dll). The queued delivery transactions are processed and logged asynchronously by background threads within the application.
The source code is listed in Appendix A - Application Source Code.

4. Clause 3 Related Items - Transaction and System Properties

ACID Tests	*The results of the ACID tests must disclosed along with a description of how the ACID requirements were met. This includes disclosing which case was followed for the execution of Isolation Test 7. [Clause 8.1.4.1]*

All ACID tests were performed successfully. The following sections describe the requirements of each of the tests as described in Clause 3 and the approach used to satisfy them.

All ACID tests were performed on the PRIMERGY F200 system using the fully scaled database, except for the test of durable media failure.
The durability test was performed on a database scaled to 15 warehouses. This test would also pass on a fully scaled database.

4.1 Atomicity	*The system under test must guarantee that database transactions are atomic; the system will either perform all individual operations on the data, or will assure that no partially-completed operations leave any effects on the data. [Clause 3.2.1]*

Commit Transaction	Perform the Payment transaction for a randomly selected warehouse, district, and customer (by customer number as specified in Clause 2.5.1.2) and verify that the records in the CUSTOMER, DISTRICT, and WAREHOUSE tables have been changed appropriately. [Clause 3.2.2.1]

The following steps demonstrated atomicity for completed (COMMIT) transactions:

- A row was randomly selected from the warehouse, district and customer table.
- the current balance was noted.
- A payment transaction was executed with the above identifiers and a known amount.
- The transaction was committed.
- It was verified, that the rows contain the correct updated balances.

Rollback Transaction	Perform the Payment transaction for a randomly selected warehouse, district, and customer (by customer number as specified in Clause 2.5.1.2) and substitute a ROLLBACK of the transaction for the COMMIT of the transaction. Verify that the records in the CUSTOMER, DISTRICT, and WAREHOUSE tables have NOT been changed. [Clause 3.2.2.2]

The following steps demonstrated atomicity for aborted (ROLLBACK) transactions:

- A row was randomly selected from the warehouse, district and customer table.
- the current balance was noted.
- A payment transaction was executed with the above identifiers and a known amount.
- The transaction was rolled back.
- It was verified, that the rows contain the original balances.

4.2 Consistency	*Consistency is the property of the application that requires any execution of a database transaction to take the database from one consistent state to another, assuming that the database is initially in a consistent state. [Clause 3.3.1]*

Consistency conditions 1 - 4 were tested by issuing queries to the database. The results of the queries verified that the database was consistent for all these tests. The tests were performed before and after the performance run on the same database that was used for the benchmark.

4.3 Isolation	*Operations of concurrent transactions must yield results which are indistinguishable from the results which would be obtained by forcing each transaction to be serially executed to completion in some order.*

We ran all of the seven isolation tests as described in clause 3.4.2.1 to 3.4.2.7 and additionally the two phantom protection tests. The tests were executed using shell scripts to issue queries to the database. The results of the queries verified that the required isolation had been met.

4.4 Durability	*The tested system must guarantee durability: the ability to preserve the effects of committed transactions and insure database consistency after recovery from any one of the failures listed in Clause 3.5.3. [Clause 3.5]* *List of single failures* *1 Permanent irrecoverable failure of any single durable medium containing TPC-C database tables or recovery log data* *2 Instantaneous interruption (system crash / system hang) in processing which requires system reboot to recover* *3 Failure of all or part of memory (loss of contents).*
	[Clause 3.5.3] *The intent of these tests is to demonstrate that all transactions whose output messages have been received at the terminal or RTE have in fact been committed in spite of any single failure from the list in Clause 3.5.3 and that all consistency conditions are still met after the database is recovered.* *It is required that the system crash test(s) and the loss of memory test(s) described in Clause 3.5.3.2 and 3.5.3.3 be performed under full terminal load and a fully scaled database. The durable media failure test(s) described in Clause 3.5.3.1 may be performed on a subset of the SUT configuration and database. For the SUT subset, all multiple hardware components, such as processors and disk / controllers in the full SUT configuration, must be represented by the greater of 10% of the configuration or two of each of the multiple hardware components. The database must be scaled to at least 10% of the fully scaled database, with a minimum of two warehouses. ... Furthermore, the standard driving mechanism must be used in this test. The test sponsor must state that to the best of their knowledge, a fully scaled test would also pass all durability tests. [Clause 3.5.4]*

The failure of all or part of memory test and the system crash test were combined with the loss of log disk and performed under full load and by using a fully scaled database.

The full hardware configuration of the SUT (in accordance with Clause 3.5.4) and the same test procedure was used during all durability tests, except the test for loss of data.

- The current count of the total number of orders was determined by summing up the D_NEXT_O_ID fields of all rows in the DISTRICT table before the test.

- After 6 min in steady state we pulled off one of the log disks. As we use hardware-mirrored diskpairs with the SCSI-controller, execution continued.
- After additional 6 min we powered of the server to emulate the loss of memory. After server system reboot, SQL-Server starts with recovering the database tpcc. After completion, we computed the sum of D_NEXT_O_ID from district. Client and RTE systems were interrupted and evaluation started on the RTE. The difference of all D_NEXT_O_ID between RTE an server was in the permitted scope.

The durable media failure test for loss of data disk was performed with 48 of the 96 data disks and a database scaled to 15 warehouses under the load of 150 users. We used one RTE and one client system. To the best of the test sponsor's knowledge, a fully loaded and fully scaled database would also pass this durability test.

- The database was backed up.
- The current count of the total number of orders was determined by summing up the D_NEXT_O_ID fields of all rows in the DISTRICT table before the test.
- After 5 min in steady state we pulled of one of the data disks.
- SQL-Server recognized the loss of a device. We dumped the transaction log and removed the database with dropdevice. Then we shut down SQL-Server and the system.
- We replaced the disk and made it online.
- We restarted SQL-Server, no tpcc database and none of its devices were present. We recreated the database, loaded dump and load transaction log
- After completion, we computed the sum of D_NEXT_O_ID from district.
- Client and RTE systems were interrupted and evaluation started on the RTE. The difference of all D_NEXT_O_ID between RTE an server was in the permitted scope.

5. Clause 4 Related Items - Scaling and Database Population

5.1 Initial Cardinality of Tables	*The cardinality (e.g., the number of rows) of each table, as it existed at the start of the benchmark run (see Clause 4.2), must be disclosed. If the database was over-scaled and inactive rows of the WAREHOUSE table were deleted (see Clause 4.2.2), the cardinality of the WAREHOUSE table as initially configured and the number of rows deleted must be disclosed. [Clause 8.1.5.1]*

The database for the PRIMERGY F200 system was scaled for 1800 warehouses. The performance run used 1760 warehouses. In accordance with Clause 4.2, the following number of records were loaded in the specified tables:

Table 5: Number of Rows

Table	Number of Records
Warehouse	1800
District	18,000
Customer	54,000,000
History	54,000,000
Order	54,000,000
New-Order	16,200,000
Order-Line	540,006,823
Stock	180,000,000
Item	100,000
Deleted Warehouses	40

The following constant values were used during the database build and benchmark test for the NURand function:

Table 6: C_LAST value

Constant C	Value
C_LAST (build)	123
C_LAST (run)	233

5.2 Distribution of Tables and Log	*The distribution of tables and logs across all media must be explicitly depicted for the tested and priced systems. [Clause 8.1.5.2]*

Table 7: Logical Organization of the Database

Disk	Controller	Disktype	RAID Configuration	Drive Letter	Size MB	Filegroup or Filesystem
0	Symbios (onboard)	9 GB	-	System C:	9000	NTFS
1	eXtremeRAID 2000 #0	8 x 18 GB	RAID 1	L:	60000	log
2	eXtremeRAID 2000 #1	48 x 18 GB	RAID 0	E: N: X	51500 27500 200000	cs1 misc1 backup1
3	eXtremeRAID 2000 #2	48 x 18 GB	RAID 0	F: O: Y:	51500 27500 200000	cs2 misc2 backup2

5.3 Database Model, Interface, and Access Language	*A statement must be provided that describes:* *1. The data model implemented by the DBMS used (e.g., relational, network, hierarchical)* *2. The database interface (e.g., embedded, call level) and access language (e.g., SQL, DL/1, COBOL read/write) used to implement the TPC-C transactions. If more than one interface/access language is used to implement TPC-C, each interface / access language must be described and a list of which interface/access language is used with which transaction type must be disclosed.* *[Clause 8.1.5.3]*

Microsoft SQL Server 2000 Enterprise Edition SP1 is a Relational DataBase Management System. The interface used was Microsoft SQL Server 2000 Enterprise Edition SP1 stored procedures accessed with Remote Procedure Calls embedded in C code.

5.4 Database Partitions/Replications Mapping	*The mapping of database partitions/replications must be explicitly described. [Clause 8.1.5.4]*

There was no partitioning and/or replication used in this implementation.

5.5 **60 day space Calculation**	*Details of the 60-day space computations along with proof that the database is configured to subtain 8 hours of growth for the dynamic tables (Order, Order-Line, and History) must be disclosed (see Clause 4.2.3). [Clause 8.1.5.5]*

Calculations of space requirements in the priced configurations for the 60-day period are provided in Appendix D – Space Calculation.

6. Clause 5 Related Items - Performance Metrics and Response Time

6.1 Measured tpmC	*Measured tpmC must be reported. [Clause 8.1.6.1]*

During the 120 minutes measurement period on the PRIMERGY F200 the throughput measured was 22,007.12 tpmC.

6.2 Response Times	*Ninetieth percentile, maximum and average response times must be reported for all transaction types as well as for the Menu response time. [Clause 8.1.6.2]*

Table 8: Response Times

Type	Average	Maximum	90 Percentile
New-Order	0.41	9.27	0.67
Payment	0.33	9.21	0.58
Order-Status	0.36	8.25	0.61
Interactive Delivery	0.11	6.49	0.12
Deferred Delivery	0.30	5.83	0.49
Stock-Level	1.44	10.14	1.97
Menu	0.11	8.10	0.12

6.3 Keying and Think Times	*The minimum, the average, and the maximum keying and think times must be reported for each transaction type. [Clause 8.1.6.3]*

Table 9: Keying Times

Keying Times			
Type	**Average**	**Maximum**	**Minimum**
New-Order	18.01	18.04	18.00
Payment	3.01	3.04	3.00
Order-Status	2.01	2.04	2.00
Delivery	2.01	2.04	2.00
Stock-Level	2.01	2.03	2.00

Table 10: Think Times

Think Times			
Type	**Average**	**Maximum**	**Minimum**
New-Order	12.05	120.50	0.000
Payment	12.04	120.50	0.000
Order-Status	10.04	100.50	0.000
Delivery	5.05	50.50	0.000
Stock-Level	5.05	50.50	0.000

6.4 Graphs

Response Time frequency distribution curves (see Clause 5.6.1) must be reported for each transaction type. [Clause 8.1.6.4]

The performance curve for response times versus throughput (see Clause 5.6.2) must be reported for the New-Order transaction. [Clause 8.1.6.5]

Think Time frequency distribution curves (see Clause 5.6.3) must be reported for each transaction type. [Clause 8.1.6.6]

A graph of throughput versus elapsed time (see Clause 5.6.5) must be reported for the New-Order transaction. [Clause 8.1.6.8]

Figure 3: New-Order Response Time Distribution

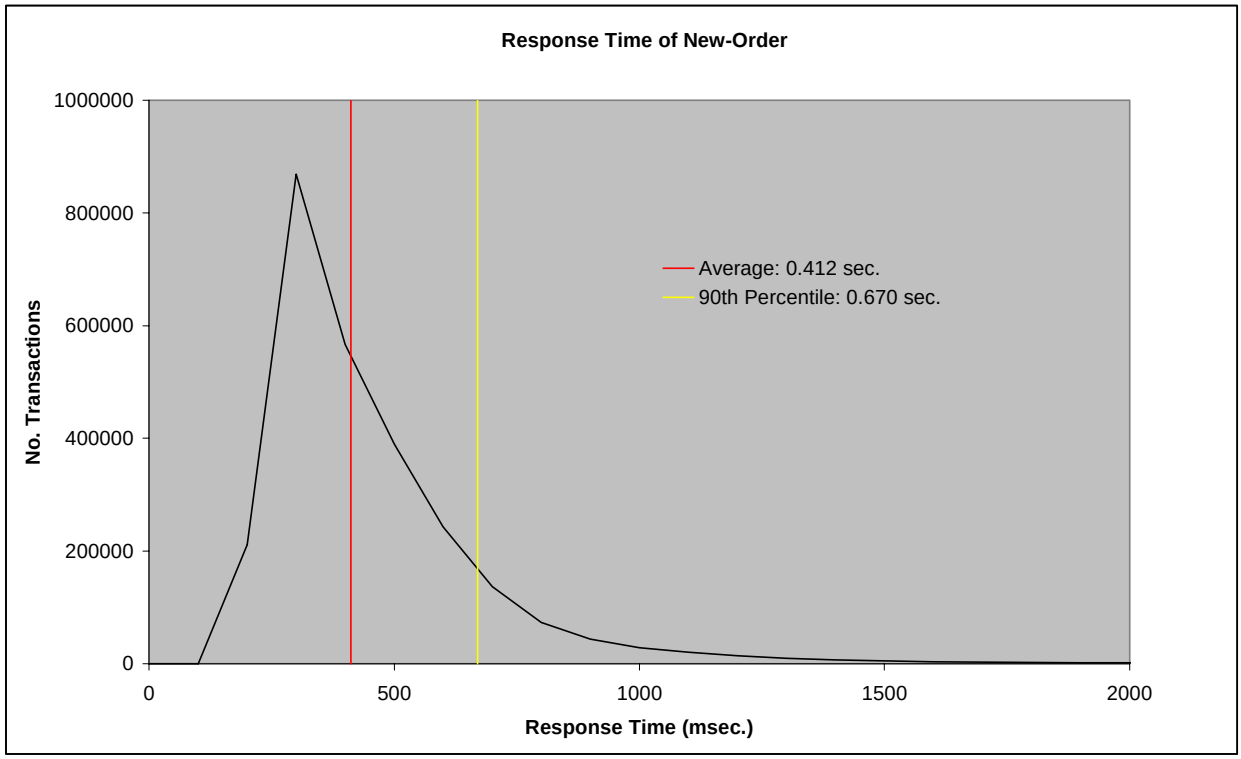

FIGURE 4:PAYMENT RESPONSE TIME DISTRIBUTION

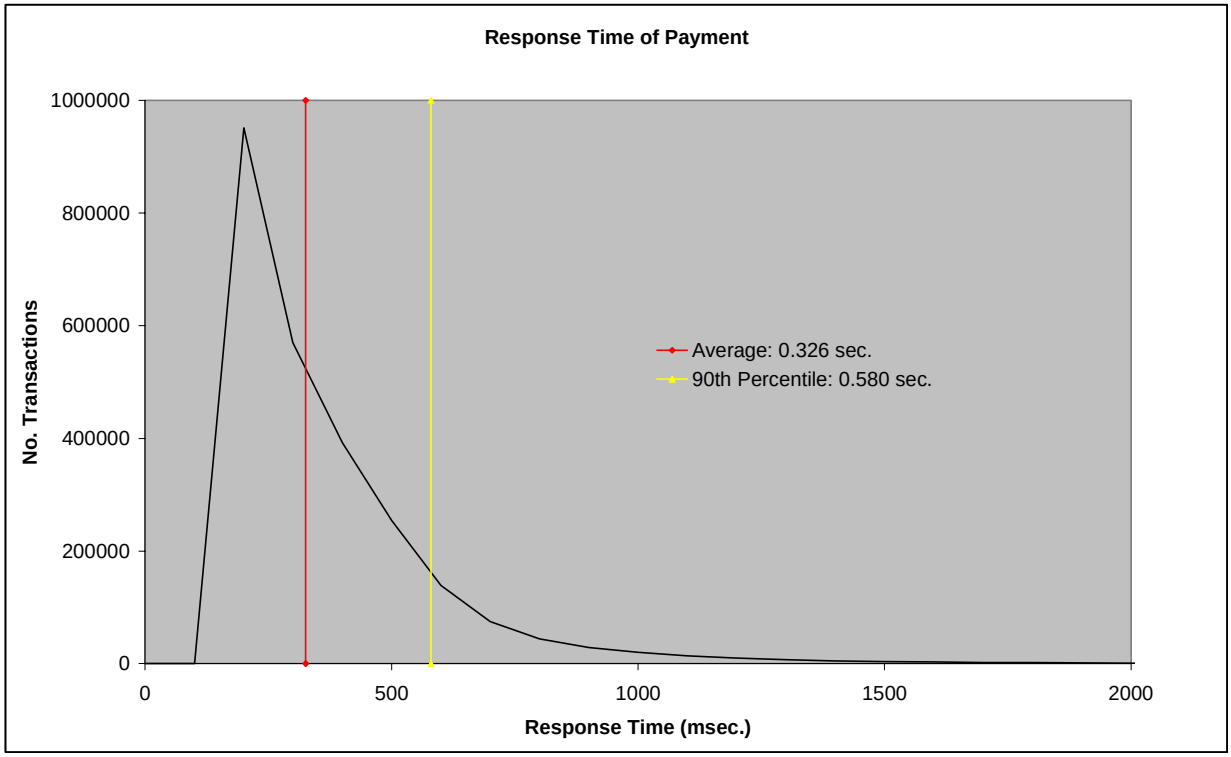

Figure 5:Order-Status Response Time Distribution

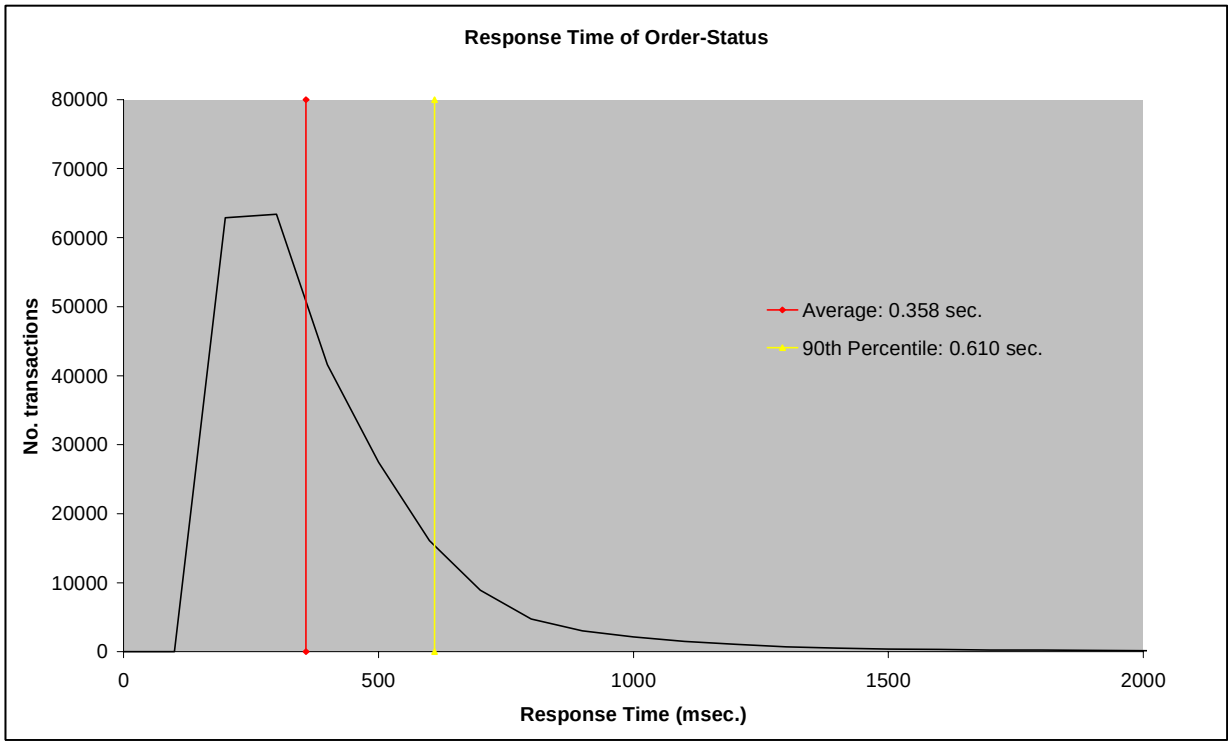

Figure 6: Delivery Response Time Distribution

Figure 7: Stock-Level Response Time Distribution

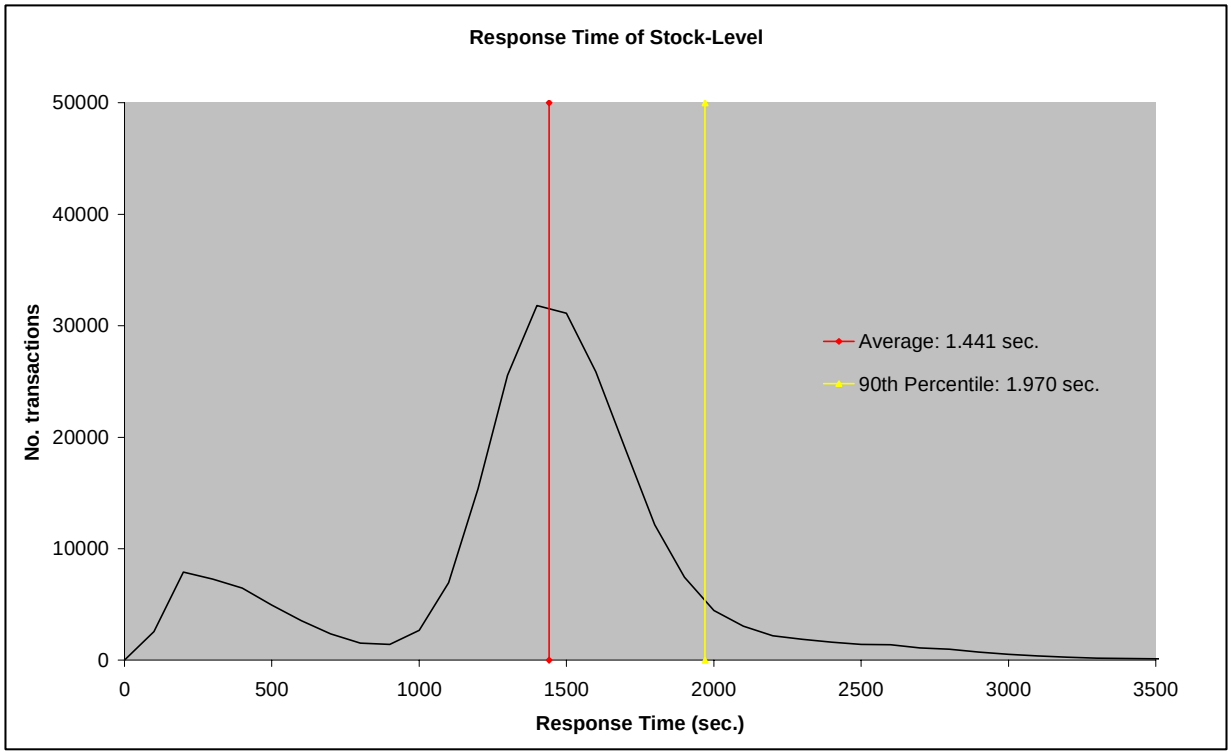

Figure 8: Response Time Versus Throughput

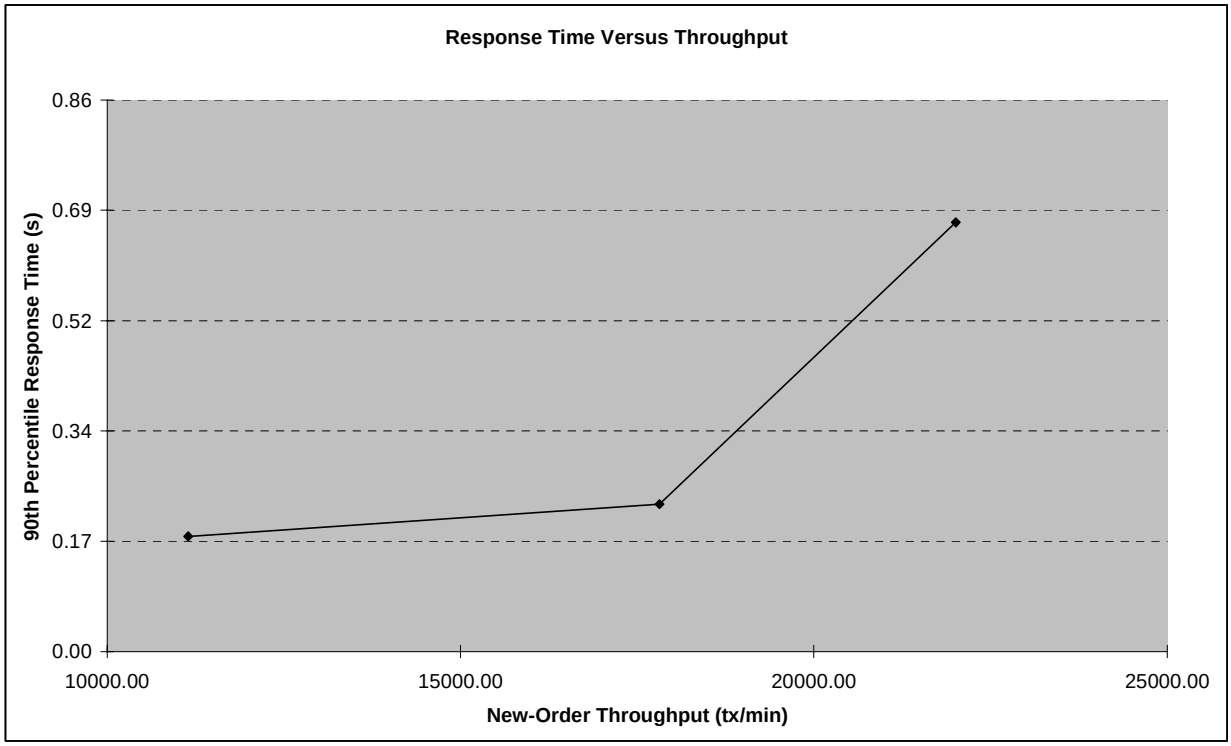

Figure 9: New-Order Think Time Distribution

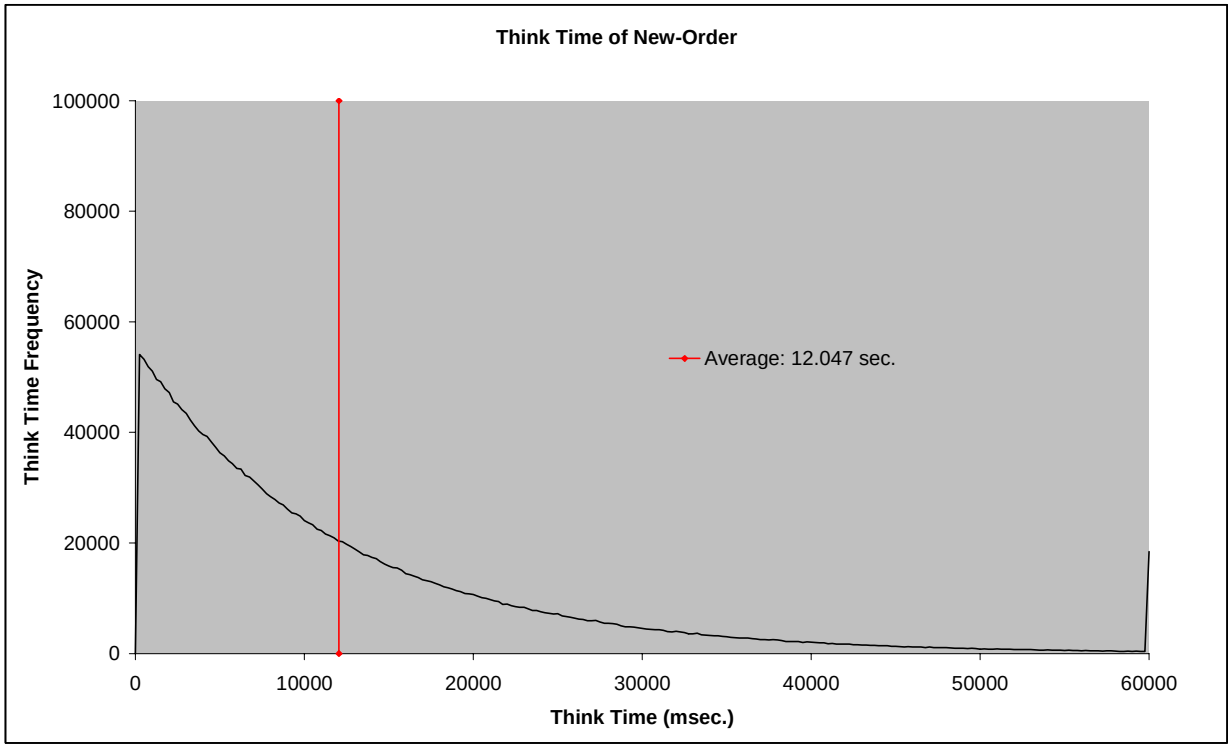

Figure 10: Throughput Versus elapsed Time

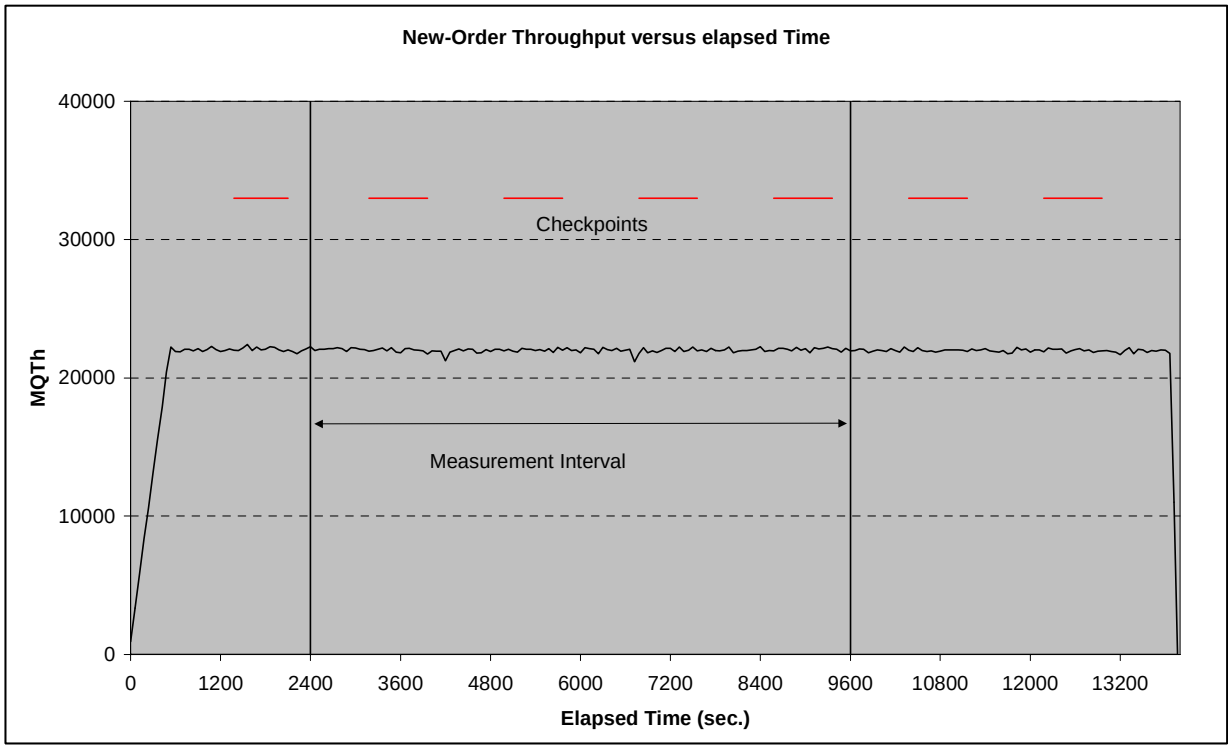

6.5 Steady State Determination	*The method used to determine that the SUT had reached a steady state prior to commencing the measurement interval (see Clause 5.5) must be described. [Clause 8.1.6.9]*

In all test runs, steady state was achieved before the measurement period began. Steady state was determined to occur based on a visual inspection of tpmC versus time (see graph in section 6.4).

The graph in section 6.4 illustrates that the measurement period was within the steady state period for the run. One checkpoint occurred before and four during the measurement period.

6.6 Work Performed	*A description of how the work normally performed during a sustained test (for example checkpointing, writing redo/undo log records, etc.), actually occurred during the measurement interval must be reported. [Clause 8.1.6.10]*

The RTE generated the required input data to choose a transaction from the menu. This data was timestamped and captured in RTE log files before being transmitted. There was one log file for each user. The input screen for the requested transaction was returned and it was also captured and timestamped in the RTE log files. The difference between these two timestamps was the menu response time.

The RTE generated the required input data for the chosen transaction. It waited to complete the minimum required key time before transmitting the input screen. The transmission was timestamped and captured in RTE log files. The return of the screen with the required response data was timestamped and captured in the RTE log files. The difference between these two timestamps was the response time for that transaction.

The RTE then waited the required think time interval before repeating the process starting at selecting a transaction from the menu.

The RTE transmissions were sent to Internet Information Server running on the client machines through Ethernet LANs. Internet Information Server handled all screen I/O as well as all requests to the database on the server.

Internet Information Server communicated with the database server over COM+ which was used as transaction monitor.

All database operations like update, select, delete and insert are performed by one of the TPC-C back end programs. The TPC-C backend program commits the transaction after all the corresponding operations are done.

Modified database buffers are migrated to disk a least-recently-used basis independent of transaction commits. In addition, every block modification is protected by log records. Asynchronously the log buffers are flushed to a log file on disk either when the transaction is committed or when the log buffer's fill state reaches it's limit. The log buffer's always flushed by a commit before it become full.

To perform checkpoints at specific intervals, we wrote a script to schedule multiple checkpoints at specific intervals. By setting the trace flag #3502, SQL Server logged the checkpoint beginning and ending time in the ERRORLOG file. The script included a wait time between each checkpoint equal to the measurement interval which was 120 minutes. The checkpoint script was started manually after the RTE had all users logged in and sending transactions.

At each checkpoint, Microsoft SQL Server wrote to disk all memory pages that had been updated but not yet physically written to disk. Upon completion of the checkpoint, Microsoft SQL Server wrote a special record to the recovery log to indicate that all disk operations had been satisfied to this point.

6.7 Duration of Checkpoints	*The start time and duration in seconds of at least the four (4) longest checkpoints during the MeasurementInterval must be disclosed (see Clause 5.5.2.2 (2)). [Clause 8.1.6.11]*

There was one checkpoint before measurement and four checkpoints during measurement. Starttime and duration of these four checkpoints is listed in the following table:

Table 11: Duration of Checkpoints

Measurement		duration	
Start =	End =	minutes	seconds
10:22:00	12:22:00	120	7200
4 Checkpoints		duration	
Start =	End =	minutes	seconds
10:35:02	10:48:47	13:45	825
11:05:01	11:17:56	12:55	775
11:35:00	11:47:50	12:50	770
12:04:59	12:18:40	13:41	821

6.8 Duration of Measurement	*A statement of the duration of the measurement interval for the reported Maximum Qualified Throughput (tpmC) must be included. [Clause 8.1.6.12]*

The measurement interval of the PRIMERGY F200 system test was 120 minutes.

6.9 Regulation of Transaction Mix	*The method of regulation of the transaction mix (e.g., card decks or weighted random distribution) must be described. If weighted distribution is used and the RTE adjusts the weights associated with each transaction type, the maximum adjustments to the weight from the initial value must be disclosed. [Clause 8.1.6.13]*

The transaction mix was regulated by weighted distribution. The chosen weights meet the required minimum percentages of the mix which are described in Clause 5.2.3 of the Standard Specifications. No adjustments were made by the RTE.

6.10 Transaction Mix	*The percentage of the total mix for each transaction type must be disclosed. [Clause 8.1.6.14]*

Table 12: Transaction Mix

	Percentage
New-Order	44.89 %
Payment	43.03 %
Order-Status	4.01 %
Delivery	4.04 %
Stock-Level	4.03 %

6.11 Transaction Statistics	*The percentage of New-Order transactions rolled back as a result of invalid item number must be disclosed. [Clause 8.1.6.15]* *The average number of order-lines entered per New-Order transaction must be disclosed. [Clause 8.1.6.16]* *The percentage of remote order-lines entered per New-Order transaction must be disclosed. [Clause 8.1.6.17]* *The percentage of remote Payment transactions must be disclosed. [Clause 8.1.6.18]* *The percentage of customer selections by customer last name in the Payment and Order-Status transactions must be disclosed. [Clause 8.1.6.19]* *The percentage of Delivery transactions skipped due to there being fewer than necessary orders in the New-Order table must be disclosed. [Clause 8.1.6.20]*

The numerical quantities which are required in Clause 8.1.6.15 to 8.1.6.20 are already listed in a table above (see section 3.5).

6.12 Checkpoint Statistics	*The number of checkpoints in the Measurement Interval, the time in seconds from the start of the Measurement Interval to the first checkpoint and the Checkpoint Interval must be disclosed. [Clause 8.1.6.21]*

The numerical quantities which are required in Clause 8.1.6.21 are already listed above (see section 6.7).

7. Clause 6 Related Items - SUT, Driver, and Communication Definition

7.1 RTE Inputs	*If the RTE is commercially available, then its inputs must be specified. Otherwise, a description must be supplied of what inputs (e.g., scripts) to the RTE had been used. [Clause 8.1.7.1]*

Microsoft Benchcraft was used as the RTE to emulate the terminals. Its input parameters are shown in Appendix C - Tunable Parameters and Options.

We used COM+ to simulate terminal users, generate random data, record response times and statistical data. Its input parameters are shown in Appendix C - Tunable Parameters and Options.

7.2 Lost Connections	*The number of terminal connections lost during the Measurement Interval must be disclosed (seeClause 6.6.2). [Clause 8.1.7.3]*

There were no lost connections during measurement interval.

7.3 Functionality and Performance of Emulated Components	*It must be demonstrated that the functionality and performance of the components being emulated in the Driver System are equivalent to that of the priced system. The results of the test described in Clause 6.6.3.4 must be disclosed. [Clause 8.1.7.3]*

The Driver System consisted of a PRIMERGY 870. This driver was attached to the client machine through a 100 Mbps ethernet LAN and switch. Since this is exactly the same connectivity as configured in the priced system, no component was emulated. Therefore, the test described in Clause 6.6.3.4 was not required.

7.4 Functional Diagrams of the Benchmarked and Proposed Configuration	*A complete functional diagram of both the benchmark configuration and the configuration of the proposed (target) system must be disclosed. A detailed list of all software and hardware functionality being performed on the Driver System, and its interface to the SUT must be disclosed (see Clause 6.6.3.6). [Clause 8.1.7.4]*

Figure 1 and Figure 2 in section 1.4 show the functional diagrams of the benchmark configuration and the priced configuration.

7.5 Network Configurations of the Tested and Proposed Services	*The network configurations of both the tested services and the proposed (target) services which are being represented and a thorough explanation of exactly which parts of the proposed configuration are being replaced with the Driver System must be disclosed (see Clause 6.6.4). [Clause 8.1.7.5]*

Figure 1 and Figure 2 in section 1.4 show the network setup of both configurations. The driver replaces the workstations.

In both configurations one 100Mbs ethernet LAN segment was used to connect the server with the 2 clients and 100Mbs LAN with switch to connect the RTE systems or 17,60 workstations to the clients.

7.6 **Network Bandwidth**	*The bandwidth of the network(s) used in the tested / priced configuration must be disclosed. [Clause 8.1.7.6]*

The ethernet used in the local area network (LAN) between the emulated user system and the front-end system complies with the IEEE 802.3 standard. Its bandwith is 100 Mbps. Between front-end and SUT the bandwidth is 100 Mbps.

7.7 **Operator Intervention**	*If the configuration requires operator intervention (see Clause 6.6.6), the mechanism and the frequency of this intervention must be disclosed. [Clause 8.1.7.7]*

The PRIMERGY F200 requires no operator intervention to sustain the reported throughput.

8. Clause 7 Related Items - Pricing

8.1 **System Pricing**	*A detailed list of hardware and software used in the priced system must be reported. Each separately orderable item must have vendor part number, description, and release/revision level, and either general availability status or committed delivery date. If package-pricing is used, vendor part number of the package and a description uniquely identifying each of the components of the package must be disclosed. Pricing source(s) and effective date(s) of price(s) must also be reported. [Clause 8.1.8.1]* *The total 3-year price of the entire configuration must be reported, including: hardware, software, and maintenance charges. Separate component pricing is recommended. The basis of all discounts used must be disclosed. [Clause 8..1.8.2]*

The details of the hardware and software are reported in the summary in front of this report. The spreadsheet used to determine the 3-year price and the speadsheet used to describe the priced configuration can be found in Appendix E - Price Quotations.

8.2 **Availability Dates**	*The committed delivery date for general availability (availability date) of products used in the price calculations must be reported. When the priced system includes products with different availability dates, the reported availability date for the priced system must be the date at which all components are committed to be available. This single date must be reported on the first page of the Executive Summary. All availability dates,whether for individual components or for the SUT as a whole, must be disclosed to a precision of one day. [Clause 8.1.8.3]*

All hardware and software components used in the price calculations of the PRIMERGY F200 system will be generally available from Fujitsu Siemens Computers GmbH as of November 1, 2001.

8.3 **Throughput and Price/Performance**	*A statement of the measured tpmC, as well as the respective calculations for 3-year pricing, price/performance (price/tpmC), and the availability date must be included. [Clause 8.1.8.4]*

PRIMERGY F200 system was measured at 22,007.12 tpmC with Microsoft SQL Server 2000 Enterprise Edition SP1 with a 3-year system price of €196,805. The respective price/performance for the PRIMERGY F200 is €8.94/tpmC. The priced PRIMERGY F200 will be available as of November 1, 2001.

8.4 **Country Specific Pricing**	*Additional Clause 7 related items may be included in the Full Disclosure Report for each country specific priced configuration. Country specifiv pricing is subject to Clause 7.1.7 [Clause 8.1.8.5]*

The system is being priced for Germany.

8.5 **Usage Pricing**	*For any usage pricing, the sponsor must diclose:* • *Usage level at which the component was priced.* • *A statement of the company policy allowing such pricing.* *[Clause 8.1.8.6]*

The component pricing based on usage is shown below:

- One Microsoft SQL Server 2000 Enterprise Edition SP1
- One Windows 2000 Server SP2
- 2 Microsoft Windows 2000 Server SP2 license (includes 5 client access licenses)
- One Microsoft Visual C++ Professional 6.0

9. Clause 8 Related Items - Audit

9.1 Auditor	*The auditor's name, address, phone number, and a copy of the auditor's attestation letter indicating compliance must be included in the Full Disclosure Report.* *A review of the pricing model is required to ensure that all components required are priced (see Clause 9.2.8). The auditor is not required to review the final Full Disclosure Report or the final pricing prior to issuing the attestation letter. [Clause 8.1.9]*

The benchmark test of the PRIMERGY F200 system with Microsoft SQL Server 2000 Enterprise Edition SP1 was independently audited by:

Francois Raab, TPC certified auditors of Infosizing.
The attestation letter is included in Appendix F.

Requests for this TPC-C Full Disclosure Report should be sent to:

//
// Function name: MakeAlphaString
//
//====================================================================

//philipdu 08/13/96 Changed MakeAlphaString to use A-Z, a-z, and 0-9 in
//accordance with spec see below:
//The spec says:
//4.3.2.2  The notation random a-string [x .. y]
//(respectively, n-string [x .. y]) represents a string of random
alphanumeric
//(respectively, numeric) characters of a random length of minimum x,
maximum y,
//and mean (y+x)/2. Alphanumerics are A..Z, a..z, and 0..9.  The only other
//requirement is that the character set used "must be able to represent a
minimum
//of 128 different characters".  We are using 8-bit chars, so this is a non
issue.
//It is completely unreasonable to stuff non-printing chars into the text
fields.
//-CLevine 08/13/96

[CD-ROM]

Item Value
Drive D:
Description    CD-ROM Drive
Media Loaded    False
Media Type CD-ROM
Name MITSUMI CD-ROM FX4830T!B
Manufacturer    (Standard CD-ROM drives)
Status    OK
Transfer Rate   Not Available
SCSI Target ID  0
PNP Device ID   IDE\CDROMMITSUMI_CD-
ROM_FX4830T!B_____________R02E____\5&3858FEE&0&0.0.0

[Sound Device]

Item Value
No sound devices

[Display]

Item Value
Name ATI Technologies Inc. RAGE XL PCI
PNP Device ID
     PCI\VEN_1002&DEV_4752&SUBSYS_007A110A&REV_27\3&13C0B0C5&0&20
Adapter Type    ATI RAGE XL PCI, ATI Technologies Inc. compatible
Adapter Description  ATI Technologies Inc. RAGE XL PCI
Adapter RAM    8.00 MB (8,388,608 bytes)
Installed Drivers    atidrab.dll
Driver Version  5.00.2179.1
INF File  display.inf (atirage3 section)
Color Planes    1
Color Table Entries  16777216
Resolution 800 x 600 x 75 hertz
Bits/Pixel 24

[Infrared]

Item Value
No infrared devices

[Input]

[ Following are sub-categories of this main category ]

[Keyboard]

Item Value
Description    Standard 101/102-Key or Microsoft Natural PS/2 Keyboard
Name Enhanced (101- or 102-key)
Layout    00000407
PNP Device ID   ACPI\PNP0303\5&1413D98F&0
NumberOfFunctionKeys 12

[Pointing Device]

Item Value
Hardware Type   PS/2 Compatible Mouse
Number of Buttons    3
Status    OK
PNP Device ID   ACPI\PNP0F13\5&1413D98F&0
Power Management Supported False
Double Click Threshold    6
Handedness Right Handed Operation

[Modem]

Item Value
```

```
No modems

[Network]

[System Summary]

Item Value
OS Name    Microsoft Windows 2000 Server
Version    5.0.2195 Service Pack 2 Build 2195
OS Manufacturer Microsoft Corporation
System Name     B210CL1
System Manufacturer  FUJITSU SIEMENS COMPUTERS
System Model    System Name
System Type     X86-based PC
Processor  x86 Family 6 Model 8 Stepping 6 GenuineIntel ~933 Mhz
BIOS Version    Award Medallion BIOS v6.0
Windows Directory    C:\WINNT
System Directory     C:\WINNT\System32
Boot Device     \Device\Harddisk0\Partition1
Locale     United States
User Name  B210CL1\Administrator
Time Zone  W. Europe Daylight Time
Total Physical Memory     523,800 KB
Available Physical Memory 442,244 KB
Total Virtual Memory 1,802,568 KB
Available Virtual Memory  1,665,292 KB
Page File Space 1,278,768 KB
Page File  C:\pagefile.sys

```

This section discloses the Microsoft SQL Server 2000 Enterprise Edition SP1 parameters used on the PRIMERGY F200 server system.

```
Microsoft SQL Server Startup Parameters:

sqlservr -c -x -T3502 -g80

where:
-c Start SQL Server independently of the Windows NT Service Control Manager
-x Disables the keeping of CPU time and cache-hit ratio statistics
-T3502 Prints a message to the SQL Server log at start and end of each checkpoint
-g80 memory in MB reserved for memory requests outside the buffer pool

Microsoft SQL Server Stack Size:

The default stack size for Microsoft SQL Server 2000 was changed using the EDITBIN utility:
editbin /STACK:131072

Microsoft SQL Server Configuration Parameters:

October 24, 2001

I remotely verified the TPC Benchmark™ C performance of the following Client Server configuration:

Platform: **PRIMERGY F200**

Operating system: **Microsoft Windows 2000 Server SP2**

Database Manager: **Microsoft SQL Server 2000 Enterprise Edition SP1**

Transaction Manager: **Microsoft COM+ (Included in Windows 2000)**

The results **were:**

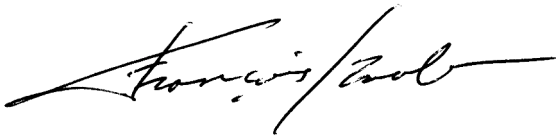
CPU's Speed	Memory	Disks	NewOrder 90% Response Time	**tpmC**
Server: PRIMERGY F200				
2 x Pentium III (1266 MHz)	4 GB Main (512KB L2 Cache per processor)	1 x 9 GB 104 x 18 GB	0.67 Seconds	**22,007.12**
Two (2) Clients: PREMERGY B210 (Specification for each)				
1 x Pentium III (933 MHz)	512 MB Main Cache: 256 KB	1 x 9 GB	n/a	n/a

In my opinion, these performance results were produced in compliance with the TPC's requirements for the benchmark. The following verification items were given special attention:

- The database records were the proper size
- The database was properly scaled and populated
- The required ACID properties were met

- The transactions were correctly implemented
- Input data was generated according to the specified percentages
- The transaction cycle times included the required keying and think times
- The reported response times were correctly measured.
- All 90% response times were under the specified maximums
- At least 90% of all delivery transactions met the 80 Second completion time limit
- The reported measurement interval was 120 minutes (7200 seconds)
- The reported measurement interval was representative of steady state conditions
- Four checkpoints were taken during the reported measurement interval
- The 60 day storage requirement was correctly computed
- The system pricing was verified for major components and maintenance

Respectfully Yours,



François Raab, President
