Prices used in TPC benchmarks reflect the actual prices a customer would pay for a one-time purchase of the stated components. Individually negotiated discounts are not permitted. Special prices based on assumptions about past or future purchases are not permitted. All discounts reflect standard pricing policies for the listed components. For complete details, see the pricing sections of the TPC benchmark specifications. If you find that the stated prices are not available according to these terms, please inform the TPC at pricing@tpc.org. Thank you

Abstract

This report documents the full disclosure information required by the TPC Benchmark™ C Standard Specification Revision 3.5 dated October 25, 1999, for measurements on the IBM eServer pSeries 680 Model 7017-S85. The phrase RS/6000 will be substituted for RISC System/6000 for the remainder of this document.

The software used on the IBM eServer pSeries 680 Model 7017-S85 includes AIX Version 4.3.3 operating system + APAR IY13076, Oracle8i™ Enterprise Edition(64-bit) Release 3 (8.1.7) for AIX - Based System database manager, and Websphere Application Server Enterprise Edition Version 3.0 for AIX transaction manager.

IBM eServer pSeries 680 Model 7017-S85

Preface

TPC Benchmark™ C Standard Specification was developed by the Transaction Processing Performance Council (TPC). It was released on August 13, 1992 and updated with revision 3.5 on October 25, 1999.

This is the full disclosure report for benchmark testing of the IBM eServer pSeries 680 Model 7017-S85 according to the TPC Benchmark™ C Standard Specification.

TPC Benchmark™ C exercises the system components necessary to perform tasks associated with that class of on-line transaction processing (OLTP) environments emphasizing a mixture of read-only and update intensive transactions. This is a complex OLTP application environment exercising a breadth of system components associated by such environments characterized by:

- v The simultaneous execution of multiple transaction types that span a breadth of complexity
- v On-line and deferred transaction execution modes
- v Multiple on-line terminal sessions
- v Moderate system and application execution time
- v Significant disk input/output
- v Transaction integrity (ACID properties)
- v Non-uniform distribution of data access through primary and secondary keys
- v Data bases consisting of many tables with a wide variety of sizes, attributes, and relationships
- v Contention on data access and update

This benchmark defines four on-line transactions and one deferred transaction, intended to emulate functions that are common to many OLTP applications. However, this benchmark does not reflect the entire range of OLTP requirements. The extent to which a customer can achieve the results reported by a vendor is highly dependent on how closely TPC-C approximates the customer application. The relative performance of systems derived from this benchmark does not necessarily hold for other workloads or environments. Extrapolations to any other environment are not recommended.

Benchmark results are highly dependent upon workload, specific application requirements, and systems design and implementation. Relative system performance will vary as a result of these and other factors. Therefore, TPC-C should not be used as a substitute for a specific customer application benchmarks when critical capacity planning and/or product evaluation decisions are contemplated.

The performance metric reported by TPC-C is a “business throughput” measuring the number of orders processed per minute. Multiple transactions are used to simulate the business activity of processing an order, and each transaction is subject to a response time constraint. The performance metric for this benchmark is expressed in transactions-per-minute-C (tpmC). To be compliant with the TPC-C standard, all references to tpmC results must include the tpmC rate, the associated price-per-tpmC, and the availability date of the priced configuration.

1. General Items

1.1 Application Code Disclosure

The application program (as defined in Clause 2.1.7) must be disclosed. This includes, but is not limited to, the code implementing the five transactions and the terminal input and output functions.

Appendix A contains the eServer pSeries application code for the five TPC Benchmark™ C transactions. Appendix D contains the terminal functions and layouts.

1.2 Benchmark Sponsor

A statement identifying the benchmark sponsor(s) and other participating companies must be provided.

This benchmark was sponsored by **International Business Machines Corporation** and **Oracle Corporation**.

1.3 Parameter Settings

Settings must be provided for all customer-tunable parameters and options which have been changed from the defaults found in actual products, including but not limited to:

- √ Data Base tuning options*
- √ Recovery/commit options*
- √ Consistency/locking options*
- √ Operating system and application configuration parameters.*

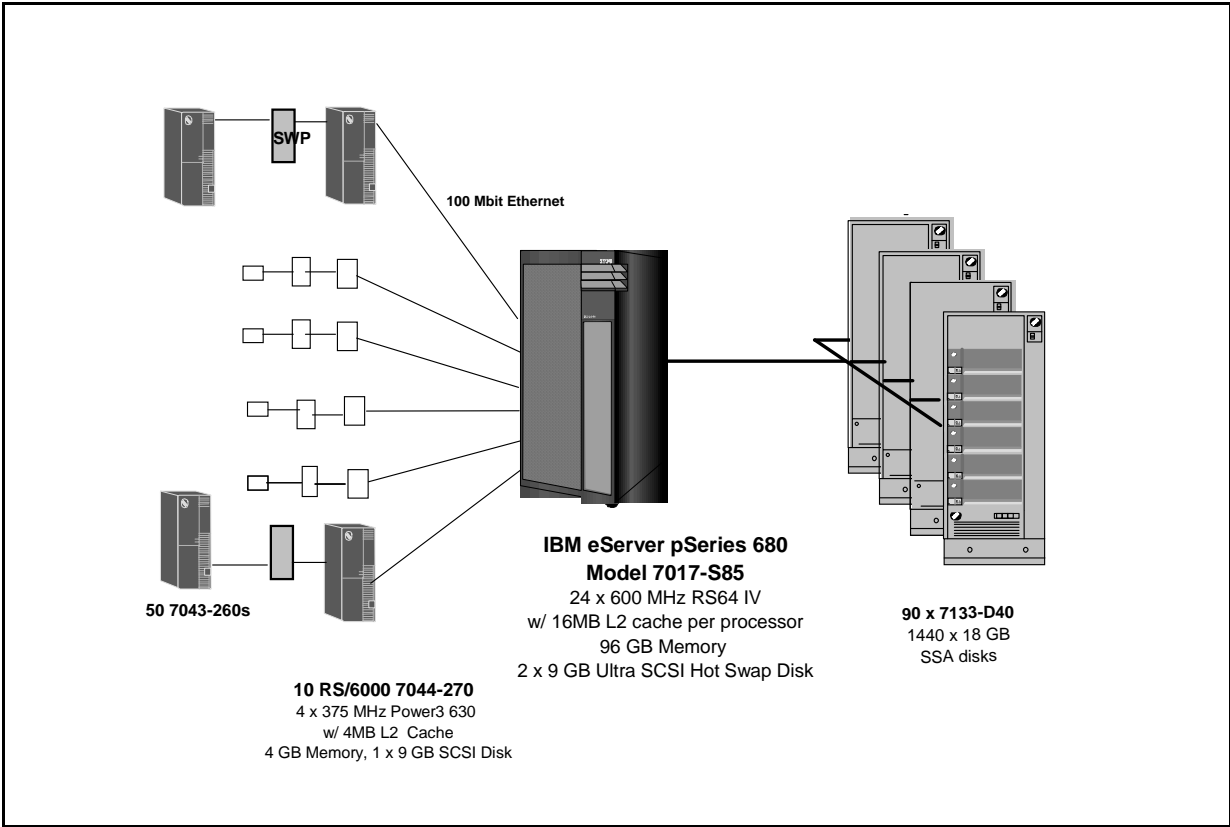

Appendix B contains the system, data base, and application parameters changed from their default values used in these TPC Benchmark™ C tests.

1.4 Configuration Diagrams

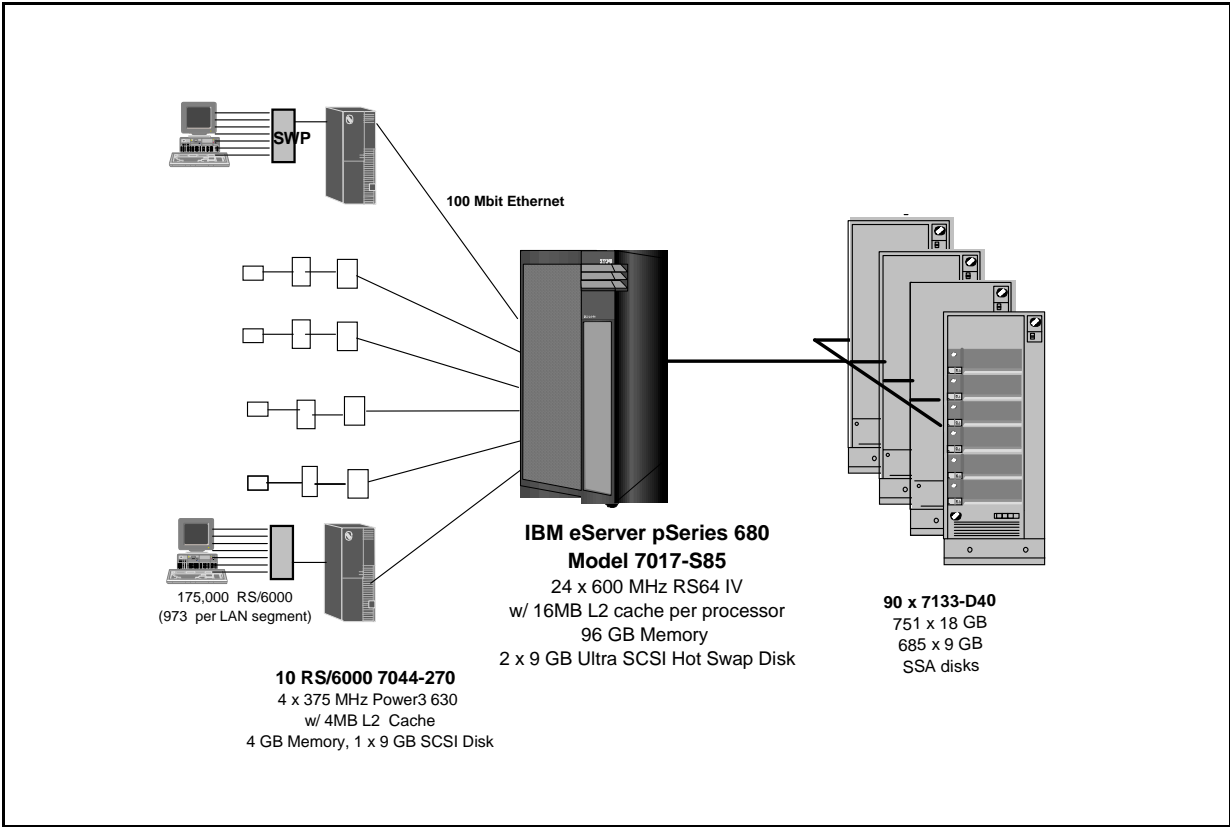

Diagrams of both measured and priced configurations must be provided, accompanied by a description of the differences. This includes, but is not limited to:

- √ Number and type of processors*
- √ Size of allocated memory, and any specific mapping/partitioning of memory unique to the test*
- √ Number and type of disk units (and controllers, if applicable)*
- √ Number of channels or bus connections to disk units, including the protocol type*
- √ Number of LAN (e.g. Ethernet) connections, including routers, work stations, terminals, etc, that were physically used in the test or are incorporated into the pricing structure (see Clause 8.1.8)*
- √ Type and run-time execution location of software components (e.g. DBMS, client processes, transaction monitors, software drivers, etc)*

eServer pSeries 680 Benchmark Configuration

eServer pSeries 680 Priced Configuration

2. Clause 1: Logical Data Base Design Related Items

2.1 Table Definitions

Listings must be provided for all table definition statements and all other statements used to setup the data base.

Appendix C contains the table definitions and the database load programs used to build the data base.

2.2 Database Organization

The physical organization of tables and indices, within the data base, must be disclosed.

Physical space was allocated to Oracle8i Server on the server disks according to the details provided in Appendix C. The size of the space segments on each disk was calculated to provide even distribution of data across the disk subsystem.

2.3 Insert and/or Delete Operations

It must be ascertained that insert and/or delete operations to any of the tables can occur concurrently with the TPC-C transaction mix. Furthermore, any restriction in the SUT data base implementation that precludes inserts beyond the limits defined in Clause 1.4.11 must be disclosed. This includes the maximum number of rows that can be inserted and the maximum key value for these new rows.

There were no restrictions on insert and/or delete operations to any of the tables. The space required for an additional five percent of the initial table cardinality was allocated to Oracle8i Server and priced as static space.

2.4 Horizontal or Vertical Partitioning

While there are few restrictions placed upon horizontal or vertical partitioning of tables and rows in the TPC-C benchmark, any such partitioning must be disclosed.

Partitioning was not used for any of the measurement reported in this full disclosure.

3. Clause 2: Transaction and Terminal Profiles Related Items

3.1 Verification for the Random Number Generator

The method of verification for the random number generation must be disclosed.

The srand(), getpid() and gettimeofday() functions are used to produce unique random seeds for each driver. The drivers use these seeds to seed the srand(), random() and srand48() functions. Random numbers are produced using wrappers around the standard system random number generators.

The negative exponential distribution uses the following function to generate the distribution. This function has the property of producing a negative exponential curve with a specified average and a maximum value 4 times the average.

```
const double RANDOM_4_Z = 0.89837799236185
const double RANDOM_4_K = 0.97249842407114

double neg_exp_4(double average {
    return - average * (1/RANDOM_4_Z * log (1 - RANDOM_4_K * drand48()));
}
```

The random functions used by the driver system and the data base generation program were verified. The C_LAST column was queried to verify the random values produced by the database generation program. After a measurement, the HISTORY, ORDER, and ORDER_LINE tables were queried to verify the randomness of values generated by the driver. The rows were counted and grouped by customer and item numbers.

Here is an example of one SQL query used to verify the random number generation functions:

```
vcreate table TEMP (W_ID int, D_ID, C_LAST char(16), CNTR int);

vinsert into TEMP select C_W_ID, C_D_ID, C_LAST, COUNT(*) from CUSTOMER group by C_W_ID,
    C_D_ID, C_LAST;

vselect CNTR, COUNT(*) from TEMP group by CNTR order by 1;
```

3.2 Input/Output Screens

The actual layouts of the terminal input/output screens must be disclosed.

The screen layouts corresponds exactly to the layout corresponding in clauses 2.4.3, 2.5.3, 2.6.3, 2.7.3 and 2.8.3 of the TPC-C specifications.

3.3 Priced Terminal Features

The method used to verify that the emulated terminals provide all the features described in Clause 2.2.2.4 must be explained. Although not specifically priced, the type and model of the terminals used for the demonstration in 8.1.3.3 must be disclosed and commercially available (including supporting software and maintenance).

The emulated workstations, IBM RS/6000 Model 44P-170, are commercially available and support all of the requirements in Clause 2.2.2.4.

3.4 Presentation Managers

Any usage of presentation managers or intelligent terminals must be explained.

The RS/6000 Model 44P-170 workstations did not involve screen presentations, message bundling or local storage of TPC-C rows. All screen processing was handled by the client system. All data manipulation was handled by the server system.

3.5 Home and Remote Order-lines

The percentage of home and remote order-lines in the New-Order transactions must be disclosed.

Table 3-1 show the percentage of home and remote transactions that occurred during the measurement period for the New-Order transactions.

3.6 New-Order Rollback Transactions

The percentage of New-Order transactions that were rolled back as a result of an illegal item number must be disclosed.

Table 3-1 show the percentage of New-Order transactions that were rolled back due to an illegal item being entered.

3.7 Number of Items per Order

The number of items per order entered by New-Order transactions must be disclosed.

Table 3-1 show the average number of items ordered per New-Order transaction.

3.8 Home and Remote Payment Transactions

The percentage of home and remote Payment transactions must be disclosed.

Table 3-1 show the percentage of home and remote transactions that occurred during the measurement period for the Payment transactions.

3.9 Non-Primary Key Transactions

The percentage of Payment and Order-Status transactions that used non-primary key (C_LAST) access to the data base must be disclosed.

Table 3-1 show the percentage of non-primary key accesses to the data base by the Payment and Order-Status transactions.

3.10 Skipped Delivery Transactions

The percentage of Delivery transactions that were skipped as a result of an insufficient number of rows in the NEW-ORDER table must be disclosed.

Table 3-1 show the percentage of Delivery transactions missed due to a shortage of supply of rows in the NEW-ORDER table.

3.11 Mix of Transaction Types

The mix (i.e. percentages) of transaction types seen by the SUT must be disclosed.

Table 3-1 show the mix percentage for each of the transaction types executed by the SUT.

3.12 Queueing Mechanism of Delivery

The queueing mechanism used to defer execution of the Delivery transaction must be disclosed.

The Delivery transaction was submitted using an RPC call to an IBM Websphere Application Server Enterprise Edition Version 3.0, Encina interface transaction manager (TM). Websphere returns an immediate response to the calling program and schedules the work to be performed. This allows the Delivery transaction to be submitted, obtain an interactive response and queue the actual data base transaction for deferred execution. Please see the application code in Appendix A for details.

Table 3-1 Numerical Quantities for Transaction and Terminal Profiles

New Order	IBM eServer pSeries 680 Model 7017-S85
Percentage of Home order lines	99.01%
Percentage of Remote order lines	0.99%
Percentage of Rolled Back Transactions	1.00%
Average Number of Items per order	10
Payment	
Percentage of Home transactions	84.99%
Percentage of Remote transactions	15.01%
Non-Primary Key Access	
Percentage of Payment using C_LAST	60.00%
Percentage of Order-Status using C_LAST	59.88%
Delivery	
Delivery transactions skipped	0
Transaction Mix	
New-Order	44.91%
Payment	43.02%
Order-Status	4.01%
Delivery	4.01%
Stock-Level	4.02%

4. Clause 3: Transaction and System Properties

The results of the ACID test must be disclosed along with a description of how the ACID requirements were met.

All ACID tests were conducted according to specification.

4.1 Atomicity Requirements

The system under test must guarantee that data base transactions are atomic; the system will either perform all individual operations on the data, or will assure that no partially-completed operations leave any effects on the data.

4.1.1 Atomicity of Completed Transaction

Perform the Payment transaction for a randomly selected warehouse, district, and customer (by customer number) and verify that the records in the CUSTOMER, DISTRICT, and WAREHOUSE tables have been changed appropriately.

The following steps were performed to verify the Atomicity of completed transactions.

1. The balance was retrieved from the CUSTOMER table for a random Customer, District and Warehouse giving BALANCE_1.
2. The Payment transaction was executed for the Customer, District and Warehouse used in step 1.
3. The balance was retrieved again for the Customer used in step 1 and step 2 giving BALANCE_2. It was verified that BALANCE_1 was greater than BALANCE_2 by AMT.

4.1.2 Atomicity of Aborted Transactions

Perform the Payment transaction for a randomly selected warehouse, district, and customer (by customer number) and substitute a ROLLBACK of the transaction for the COMMIT of the transaction. Verify that the records in the CUSTOMER, DISTRICT, and WAREHOUSE tables have NOT been changed.

The following steps were performed to verify the Atomicity of the aborted Payment transaction:

1. The Payment application code was changed to execute a rollback of the transaction instead of performing the commit.
2. Using the balance, BALANCE_2, from the CUSTOMER table retrieved for the completed transaction, the Payment transaction was executed for the Customer, District, and Warehouse used in step 1 of the section 4.1.1, using a payment amount (AMT) of 410.00. The transaction rolled back due to the change in the application code from step 1.
3. The balance was retrieved again for the Customer used for step 2 giving BALANCE_3. It was verified that BALANCE_2 was equal to BALANCE_3.

4.2 Consistency Requirements

Consistency is the property of the application that requires any execution of a data base transaction to take the data base from one consistent state to another, assuming that the data base is initially in a consistent state.

Verify that the data base is initially consistent by verifying that it meets the consistency conditions defined in Clauses 3.3.2.1 to 3.3.2.4. Describe the steps used to do this in sufficient detail so that the steps are independently repeatable.

4.2.1 Consistency Condition 1

Entries in the WAREHOUSE and DISTRICT tables must satisfy the relationship:

$$\forall W_YTD = \text{sum}(D_YTD)$$

for each warehouse defined by (W_ID = D_W_ID)

4.2.2 Consistency Condition 2

Entries in the *DISTRICT*, *ORDER*, and *NEW-ORDER* tables must satisfy the relationship:

$$\forall D_NEXT_O_ID - 1 = \max(O_ID) = \max(NO_O_ID)$$

for each district defined by ($D_W_ID = O_W_ID = NO_W_ID$) and ($D_ID = O_D_ID = NO_D_ID$). This condition does not apply to the *NEW-ORDER* table for any districts which have no outstanding new orders.

4.2.3 Consistency Condition 3

Entries in the *New-Order* table must satisfy the relationship:

$$\forall \max(NO_O_ID) - \min(NO_O_ID) + 1 = [\text{number of rows in the New-Order table for this district}]$$

for each district defined by NO_W_ID and NO_D_ID . This condition does not apply to any districts which have no outstanding new orders.

4.2.4 Consistency Condition 4

Entries in the *ORDER* and *ORDER-LINE* tables must satisfy the relationship:

$$\forall \text{sum}(O_OL_CNT) = [\text{number of rows in the ORDER-LINE table for this district}]$$

for each district defined by ($O_W_ID = OL_W_ID$) and ($O_D_ID = OL_D_ID$).

4.2.5 Consistency Tests

Verify that the data base is initially consistent by verifying that it meets the consistency conditions defined in Clauses 3.3.2.1 to 3.3.2.4. Describe the steps used to do this in sufficient detail so that the steps are independently repeatable.

The consistency conditions defined in 4.2.1 through 4.2.4 were tested using a shell script to issue queries to the database. All queries showed that the data base was in a consistent state.

After executing transactions at full load for approximately sixty minutes the shell script was executed again. All queries show that the database was still in a consistent state.

4.3 Isolation Requirements

Operations of concurrent data base transactions must yield results which are indistinguishable from the results which would be obtained by forcing each transaction to be serially executed to completion in some order.

4.3.1 Isolation Test 1

This test demonstrates isolation for read-write conflicts of *Order-Status* and *New-Order* transactions.

1. An Order status transaction T0 was executed for a randomly selected customer, and the order returned was as recorded. Transaction T0 was committed.
2. A new-order transaction T1 was started for the same customer used in T0. T1 was stopped immediately prior to commit.
3. An order-status transaction T2 was started for the same customer used in T1. Transaction T2 completed and was committed without being blocked by T1. T2 returned the same order that T0 had returned.
4. T1 completed and was committed.
5. An order-status transaction T3 was started for the same customer used in T1. T3 returned the order inserted by T1.

This result demonstrates serialization of T2 before T1. It has equivalent validity to the outcome specified in the Standard which supposes T1 to be serialized before T2.

4.3.2 Isolation Test 2

This test demonstrates isolation for read-write conflicts of Order-Status and New-Order transactions when the New-Order transaction is rolled back.

The following steps were performed to satisfy the test of isolation for Order-Status and a rolled back New-Order transactions:

1. An Order status transaction T0 was executed for a randomly selected customer, and the order returned was recorded. Transaction T0 was committed.
2. A new-order transaction T1 with an invalid item was started for the same customer used in T0. Transaction T1 was stopped prior to rollback.
3. An order-status transaction T2 was started for the same customer used in T1. T2 completed and was committed without being blocked by T1. Transaction T2 returned the same order that T0 had returned.
4. T1 was rollback.
5. An order-status transaction T3 was started for the same customer used in T1. T3 returned the same order that T0 returned.

4.3.3 Isolation Test 3

This test demonstrates isolation for write-write conflicts of two New-Order transactions.

The following steps were performed to verify isolation of two New-Order transactions:

1. The D_NEXT_O_ID of a randomly selected district was retrieved.
2. A new-order transaction T1 was started for a randomly selected customer within the district used in step1. T1 was stopped immediately prior to commit.
3. Another new-order transaction was started for the same customer used in T1. Transaction T2 waited.
4. T1 completed. T2 completed and was committed.
5. The order number returned by T1 was the same as the D_NEXT_O_ID retrieved in step 1. The order number returned by T2 was one greater than the order number returned by T1.
6. The D_NEXT_O_ID of the same district was retrieved again. It had been incremented by two (it was one greater than the order number returned by T2).

4.3.4 Isolation Test 4

This test demonstrates isolation for write-write conflicts of two New-Order transactions when one transaction is rolled back.

The following steps were performed to verify the isolation of two New-Order transactions after one is rolled back:

1. The D_NEXT_O_ID of a randomly selected district was retrieved.
2. A new-order transaction T1 with an invalid item was started for a randomly selected customer with the district used in step1. T1 was stopped immediately prior to rollback.
3. Another new-order transaction was started for the same customer used in T1. T2 waited.
4. T1 was allowed to rollback. T2 completed and was committed.
5. The order number returned by T2 was the same as the D_NEXT_O_ID retrieved in step 1.
6. The D_NEXT_O_ID of the same district was retrieved again. It had been incremented by one (it was one greater than the order number returned by T2).

4.3.5 Isolation Test 5

This test demonstrates isolation for write-write conflicts of Payment and Delivery transactions.

The following steps were performed to successfully conduct this test:

1. A query was executed to find out the customer who would be updated by the next delivery transaction for a randomly selected warehouse and district.
2. The C_BALANCE of the customer found in step 1 is retrieved.
3. A delivery transaction T1 was started for the same warehouse used in step 1. T1 was stopped immediately prior to the commit of the database transaction corresponding to the district used in step 1.
4. A payment transaction T2 was started for the same customer found in step 1. T2 waited.
5. T1 was allowed to complete. T2 completed and was committed.
6. The C_BALANCE of the customer found in step 1 was retrieved again. The C_BALANCE reflected the results of both T1 and T2.

4.3.6 Isolation Test 6

This test demonstrates isolation for write-write conflicts of Payment and Delivery transactions when the Delivery transaction is rolled back.

The following steps were performed to successfully conduct this test:

1. A query was executed to find out the customer who would be updated by the next delivery transaction for a randomly selected warehouse and district.
2. The C_BALANCE of the customer found in step 1 is retrieved
3. A delivery transaction T1 was started for the same warehouse used in step 1. T1 was stopped immediately prior to the rollback of the database transaction corresponding to the district used in step 1.
4. A payment transaction T2 was started for the same customer found in step 1. Transaction T2 waited.
5. T1 was allowed to rollback. T2 completed and was committed.
6. The C_BALANCE of the customer found in step 1 was retrieved again. The C_BALANCE reflected the results of only Transaction T2.

4.3.7 Isolation Test 7

This test demonstrates repeatable reads for the New-Order transaction while an interactive transaction updates the price of an item.

The following steps were performed to successfully conduct this test:

1. The I_PRICE of two randomly selected items were retrieved.
2. A new-order transaction T2 with a group of items X and Y was started. T2 was stopped immediately, after retrieving the prices of all items. The prices of items X and Y retrieved matched those values retrieved in step 1.
3. A transaction T3 was started to increase the price of items X and Y by 10%.
4. T3 did not stall and no transaction was rolled back. T3 was committed.
5. T2 was resumed, and the prices of all items were retrieved again within T2. The prices of items X and Y matched those retrieved in step 1.
6. T2 was committed.
7. The prices of items X and Y were retrieved again. The values matched the values set by T3.

4.3.8 Isolation Test 8

This test demonstrates isolation for phantom protection between a Delivery and a New-Order transaction.

The following steps were performed to successfully conduct this test:

1. The NO_D_ID of all new order rows for a randomly selected warehouse and district was changed. The changes were committed.
2. A delivery transaction T1 was started for the selected customer.
3. T1 was stopped immediately after reading the new order table for the selected warehouse and district . No qualifying rows were found.
4. A new order transaction T2 was started for the same warehouse and district. T2 completed and was committed without being blocked by T1.
5. T1 was resumed and the new order table was read again. No qualifying row was found.
6. T1 completed and was committed.
7. The NO_D_ID of all new order rows for the selected warehouse and district was restored to the original value. The changes were committed.

4.3.9 Isolation Test 9

This test demonstrates isolation for phantom protection between an Order-Status and a New-Order transaction.

The following steps were performed to successfully conduct this test:

1. An order status transaction T1 was started for a randomly selected customer.
2. T1 was stopped immediately after reading the order table for the selected customer The most recent order for that customer was found.
3. A new order transaction T2 was started for the same customer. T2 completed and was committed without being blocked by T1.
4. T1 was resumed and the order table was read again to determine the most recent order for the same customer. The order found was the same as the one found in step 2.
5. T1 completed and was committed.

4.4 Durability Requirements

The tested system must guarantee durability: the ability to preserve the effects of committed transactions and insure data base consistency after recovery from any one of the failures listed in Clause 3.5.3

4.4.1 Permanent Unrecoverable Failure of any Single Durable Medium

Permanent irrecoverable failure of any single durable medium containing TPC-C data base tables or recovery log data.

Failure of Durable Medium containing recovery log data and Instantaneous Interruption and Memory Failure.

This test was conducted on a fully scaled database. The following steps were performed successfully.

1. The current count of the total number of orders was determined by the sum of D_NEXT_O_ID of all rows in the DISTRICT table giving SUM_1.
2. A test was started and allowed to run for twelve minutes.
3. One of the disks containing the Oracle8i transaction log data was powered off. Since the log was on a raid disk, Oracle8i continued to process the transactions successfully.
4. The test continued for another 1 1/2 minutes.
5. The system was immediately shut down by switching the Emergency Power Off , thereby removing system power.
6. The disk from step 3 was powered back on.
7. The system was powered back on and rebooted.

8. Step 1 is performed returning the value for SUM_2. It was verified that SUM_2 was equal to SUM_1 plus the completed New_Order transactions recorded by the RTE and that no entries existed for rolled-back transactions.
9. Consistency condition 3 was verified.

Failure of Durable Medium containing TPC-C data base tables.

The following steps were successfully performed to pass the Durability test of failure of a disk unit with data base tables:

1. The contents of a disk containing a TPCC table was backed up by copying it to another disk.
2. The current count of the total number of orders was determined by the sum of D_NEXT_O_ID of all rows in the DISTRICT table giving SUM_1.
3. A scaled-down test was started and allowed to run until steady state.
4. The disk containing the TPCC table was powered off.
5. The run was stopped.
6. The disk from step 4 was powered back on and was restored from the backup copy in step 1.
7. Oracle8i was restarted and its transaction log was used to roll forward through the transactions that had completed since the run had started.
8. Step 2 was performed returning SUM_2. It was verified that SUM_2 was equal to SUM_1 plus the completed New_Order transactions recorded by the RTE and that no entries existed for rolled-back transactions.
9. Consistency condition 3 was verified.

Failure of Durable Fast Write Cache on SSA Adapter for Redo Logs

The following steps were successfully performed to pass the Durability test for failure of a durable medium that contains transient redo log transactions:

1. The SSA adapter for the Redo logs contains a cache that is powered by an onboard battery which will retain its contents if the adapter fails, or system power goes off. This test was performed in two parts:
 - A) failure of the adapter/system power
 - B) failure of the onboard battery
2. Test (A) was performed with the power-off test of the log above. After the system was powered off, the cache was removed from its current adapter and re-inserted into the system before rebooting.
3. Data on the cache was recovered successfully by meeting the requirements listed in the power-off test of the logs above.
4. Test (B). The current count of the total number of orders was determined by the sum of D_NEXT_O_ID of all rows in the DISTRICT table, giving SUM_1.
5. Test (B) was conducted by inducing a battery failure during a test run. Once the system had reached steady state, the battery was failed using a toggle switch. The system recorded the failure, flushed out its vram contents and quit using the cache. Error notices were posted into the system error log.
6. The run continued without the cache.
7. Step 4 was performed returning SUM_2. It was verified that SUM_2 was equal to SUM_1 plus the completed New_Order transactions recorded by the RTE and that no entries existed for rolled-back transactions.
8. Consistency condition 3 was verified..

5. Clause 4: Scaling and Data Base Population Related Items

5.1 Cardinality of Tables

The cardinality (e.g., the number of rows) of each table, as it existed at the start of the benchmark run, must be disclosed.

Table 5-1 portrays the TPC Benchmark™ C defined tables and the number of rows for each table as they were built initially. Table 5-1 Initial Cardinality of Tables (eServer pSeries 680). While 20,000 warehouses were built initially, only 17,500 warehouses were used during the tests. The unused warehouses were deleted.

Table Name	Number of Rows
Warehouse	17,500
District	200,000
Customer	600,000,000
History	600,000,000
Order	600,000,000
New Order	180,000,000
Order Line	5,998,902,200
Stock	2,000,000,000
Item	100,000

5.2 Distribution of Tables and Logs

The distribution of tables and logs across all media must be explicitly depicted for the tested and priced systems.

The following table depicts the data base configuration of the system tested.

Table 5-2. eServer pSeries 680 Data Distribution Benchmark Configuration

5.3 Data Base Model Implemented

A statement must be provided that describes the data base model implemented by the DBMS used.

The database manager used for this testing was Oracle8i™ Enterprise Edition(64-bit) Release 3 (8.1.7) for AIX - Based System from Oracle Corp. Oracle8i™ Enterprise Edition(64-bit) Release 3 (8.1.7) is a relational DBMS.

5.4 Partitions/Replications Mapping

The mapping of data base partitions/replications must be explicitly described.

IBM did not implement horizontal or vertical partitioning for this TPC-C test.

5.5 180 day space calculations

6. Clause 5: Performance Metrics and Response Time Related Items

6.1 Response Times

Ninetieth percentile, maximum and average response times must be reported for all transaction types as well as for the Menu response time.

Table 6-1 list the response times and the ninetieth percentiles for each of the transaction types for the measured system.

6.2 Keying and Think Times

The minimum, the average, and the maximum keying and think times must be reported for each transaction type.

Table 6-1 list the TPC-C keying and think times for the measured system.

Table 6-1. eServer pSeries 680 Response, Think and Keying Times

Response Times	New Order	Payment	Order Status	Delivery (int./def.)	Stock Level	Menus
90 %	0.78	0.73	0.76	0.19/0.27	1.14	0
Average	0.37	0.33	0.35	0.11/0.15	0.7	0
Maximum	11.9	12.67	10.81	1.87/2.63	10.93	2.54
			Think Times			
Minimum	0.01	0.01	0.01	0.01	0.01	N/A
Average	12.02	12.02	10.01	5.02	5.02	N/A
Maximum	120.21	120.21	100.11	50.21	50.20	N/A
			Keying Times			
Minimum	18.00	3.00	2.00	2.00	2.00	N/A
Average	18.01	3.01	2.01	2.01	2.01	N/A
Maximum	18.13	3.13	2.12	2.11	2.12	N/A

6.3 Response Time Frequency Distribution

Response time frequency distribution curves must be reported for each transaction type.

Figure 6-3-5. IBM eServer pSeries 680 Delivery (Deferred) Response Time Distribution

Figure 6-3-6. IBM eServer pSeries 680 Stock Level Response Time Distribution

6.4 Performance Curve for Response Time versus Throughput

The performance curve for response times versus throughput must be reported for the New-Order transaction.

Figure 6-4-1. IBM eServer pSeries 680 New-Order Response Time vs. Throughput

6.5 Think Time Frequency Distribution

A graph of the think time frequency distribution must be reported for the New-Order transaction.

Figure 6-5-1. IBM eServer pSeries 680 New-Order Think Time Distribution

6.6 Throughput versus Elapsed Time

A graph of throughput versus elapsed time must be reported for the New-Order transaction.

Figure 6-6-1. IBM eServer pSeries 680 New-Order Throughput vs. Elapsed Time

6.7 Steady State Determination

The method used to determine that the SUT had reached a steady state prior to commencing the measurement interval must be described.

All the emulated users were allowed to logon and do transactions. The time stamping interval was set to start after several minutes of rampup. Refer to the Numerical Quantities Summary pages for the rampup time. Figure 6.6.1 New-Order throughput versus Elapsed Time graph shows that the system was in steady state at the beginning of the Measurement Interval.

6.8 Work Performed During Steady State

A description of how the work normally performed during a sustained test (for example check pointing , writing redo/undo log records, etc), actually occurred during the measurement interval must be reported.

6.8.1 Transaction Flow

For each of the TPC Benchmark™ C transaction types, the following steps are executed:

IBM Websphere Application Server Enterprise Edition Version 3.0, Encina interface, was used as a transaction manager (TM). Each transaction was divided into three programs. The front end program handled all screen I/O, a database client program which connected to the database and served as a Websphere Server (a back end program), and a database server program which handled all database operations at the SUT. Both the front end and back end programs ran on the client system. The front end program communicates with the database client program through DCE RPCs. The database client program communicates with the Server system over Ethernet using SQL*Net calls. Besides calling Websphere Application Server Enterprise Edition Encina initialization code during startup, all other functions are transparent to the application code. Encina routes the transaction and balances the load according to the options defined in the configuration file in appendix B.2, The transaction flow is described below.

- Each client machine is a node in an Encina Cell.
- Three servers are configured in each node: one processes the delivery transactions and two all other transaction.

- The delivery server is configured with five processing agents each with 3 background threads to process deferred deliveries. Each process has two connections to the database.
- The two online servers is configured with 43 processing agents. Each processing agent has 1 server manager DCE threads. Each thread has one connection to the database.
- When the Encina clients are started, they connect to Encina cell.
- When terminals are started, each terminal connects to the Encina client. The client spawns a thread for each connection to handle that connection. The thread executes the 'process_terminal' routine. The process_terminal displays the TPC-C transaction menu on the user terminal.
- The TPC-C user chooses the transaction type and proceeds to fill the screen fields required for transaction.
- The process_terminal accepts all values entered by the user and transmits those values to one of the TPC_C backend programs. The transaction is performed through a DCE RPC. There is an interface for each TPC-C transaction type and each TPC-C backend program exports one or more of these interfaces. (The delivery servers export only the delivery interface, the other servers export the other four interfaces, and only those). Encina transparently routes the RPC to one of the servers exporting the corresponding interface.
- A TPC-C backend server program receives an RPC and proceeds to execute all database operations related to the request. All information entered on the user terminal is contained in the RPC.
- Once the transaction is committed, the server program fills in the output parameters. The RPC is then sent back to the client program.
- When the RPC returns to the client, the process_terminal routine writes the transaction out on the user terminal.

6.8.2 Database Transaction

All database operations are performed by the TPC-C back-end programs. The process is described below:

Using SQL*Net calls, the TPC-C back-end program interacts with Oracle8i Server to perform SQL data manipulations such as update, select, delete and insert, as required by the transaction. After all database operations are performed for a transaction, the transaction is committed.

Oracle8i Server proceeds to update the database as follows:

When Oracle8i Server changes a database table with an update, insert, or delete operation, the change is initially made in memory, not on disk. When there is not enough space in the memory buffer to read in or write additional data pages, Oracle8i Server will make space by flushing some modified pages to disk. Modified pages are also written to disk when a checkpoint occurs. Before a change is made to the database, it is first recorded in the transaction log. This ensures that the database can be recovered completely in the event of a failure. Using the transaction log, transactions that started but did not complete prior to a failure can be undone, and transactions recorded as complete in the transaction log but not yet written to disk can be redone.

6.8.3 Checkpoints

A checkpoint is the process of writing all modified data pages to disk. The TPC-C benchmark was setup to automatically checkpoint every 30 minutes. One checkpoint occurs during the rampup period, with another occurring during the measurement interval.

6.9 Reproducibility

A description of the method used to determine the reproducibility of the measurement results must be reported.

A repeatability measurement was taken for the same length of time as the measured run. The repeatability measurement was 220,406.30 tpmC.

6.10 Measurement Interval

A statement of the duration of the measurement interval for the reported Maximum Qualified Throughput (tpmC) must be included.

A thirty minute Measurement Interval was used. Further, the measurement interval is a multiple of the checkpoint interval, and the checkpoints fall outside the protected zones of either edge of the measurement interval (as required by Clause 5.5.2.2). This demonstrates that a different measurement interval over the eight hour period would yield similar throughput results.

7. Clause 6: SUT, Driver, and Communication Definition

Related Items

7.1 RTE Availability

If the RTE is commercially available, then its inputs must be specified. Otherwise, a description must be supplied of what inputs to the RTE had been used.

IBM used an internally developed RTE for these tests. Appendix D contains the scripts used in the testing.

7.2 Functionality and Performance of Emulated Components

It must be demonstrated that the functionality and performance of the components being emulated in the Driver System are equivalent to that of the priced system.

The 50 RS/6000 Model 7043-260 emulates a network of 175000 RS/6000 Model 44P-170 workstations. The communications mechanism used in the benchmark and priced configurations are the same. In the benchmark configuration a separate Ethernet LAN was used to connect two driver systems to a RS/6000 Model 7044-270 client system. In other words, there was a separate LAN segment for every two drivers to a client. Each LAN segment in the priced configuration is used to connect 973 workstations.

7.3 Network Bandwidth

The bandwidth of the network(s) used in the tested/priced configuration must be disclosed.

The Ethernet used in the LAN complies with the IEEE 802.3 standard and has a bandwidth of 10 Megabits per second Half Duplex. Each LAN segment in the IBM eServer pSeries 680 configuration connected 973 workstations.

7.4 Operator Intervention

If the configuration requires operator intervention, the mechanism and the frequency of this intervention must be disclosed.

No operator intervention is required to sustain the reported throughput during the eight hour period.

8. Clause 7: Pricing Related Items

8.1 Hardware and Programs Used

A detailed list of the hardware and software used in the priced system must be reported. Each item must have vendor part number, description, and release/revision level, and either general availability status or committed delivery date. If package-pricing is used, contents of the package must be disclosed. Pricing source(s) and effective date(s) must also be reported.

The detailed list of all hardware and programs for the priced configuration is listed in the pricing sheets (please refer to Section 8.2 for details) for each system reported. The prices for all products and features that are provided by IBM are available the same day as product or feature availability.

Pricing for IBM Websphere Application Server Enterprise Edition Version 3.0 is for Txseries License only.

Pricing for 8 port Ethernet Hubs was quoted by Netcruiser Tech. Inc..

Pricing for the 8 port Ethernet Switches was quoted by PC Connection. These are warranted (Labor and Product) for 5 years from purchase.

8.2 Five Year Cost of System Configuration

The total 5-year price of the entire configuration must be reported, including: hardware, software, and maintenance charges. Separate component pricing is recommended. The basis of all discounts used must be disclosed.

The price sheets for the eServer pSeries are contained on the following page. The basis for the discounts used are:

5-year Term Maintenance Contract Discount

This discount is available for customers who sign a 5-year maintenance agreement on the hardware. A discount of 8% is available for customers when they sign a 5-year maintenance agreement

Scope incentive

A 2% discount is applied for a ServiceElect contract that combines hardware maintenance with one or more services, which in this pricing report the selected service is Support Line.

5-year Maintenance Prepay Discount

This is a discount for prepayment of maintenance costs. A discount of 15.05% is available for this configuration based on payment for five years maintenance at time of purchase. This discount is applied to the balance after the 5-year term maintenance contract discount and Scope discount is applied.

Hardware Volume Revenue Discount

The IBM-supplied hardware and software is discounted by 45% from list price, based on the dollar value of this configuration only.

8.3 Availability Dates

The committed delivery date for general availability (availability date) of products used in the price calculations must be reported. When the priced system includes products with different availability dates, the reported availability date for the priced system must be the date at which all components are committed to be available.

All products are generally available today except the following:

Product	Availability Date
AIX 4.3.3 +APAR IY13076	April 15, 2001

8.4 Statement of tpmC and Price/Performance

A statement of the measured tpmC, as well as the respective calculations for 5-year pricing, price/performance (price/tpmC), and the availability date must be disclosed.

System	tpmC	5-year System Cost	\$/tpmC	Availability Date
IBM eServer pSeries 680	220,807.27	\$9,560,594	\$43.30	All HS/SW available as shown in Section 8.3

9. Clause 9: Audit Related Items

If the benchmark has been independently audited, then the auditor's name, address, phone number, and a brief audit summary report indicating compliance must be included in the Full Disclosure Report. A statement should be included, specifying when the complete audit report will become available and who to contact in order to obtain a copy.

The auditor's attestation letter is included in this section of this report

Benchmark Sponsor: Doug Yakesch
IBM RS/6000 Performance

Austin, Texas

Michele Resta
Oracle Corporation
500 Oracle Parkway
Redwood Shores, CA 94065

October 13, 2000

I verified the TPC Benchmark™ C performance of the following Client/Server configuration:

Platform: **IBM eServer pSeries 680 Model 7017-S85**
Operating system: **AIX 4.3.3 + APAR IY 13076**
Database Manager: **Oracle8i™ Enterprise Edition (64-bit) Release 3 (8.1.7) for AIX-Based Systems**
Transaction Manager: **WebSphere Application Server Enterprise Edition Version 3.0**

The results were:

CPU's Speed	Memory	Disks	NewOrder 90% Response Time	tpmC
Server: IBM eServer pSeries 680 Model 7017-S85				
24 x RS64-IV (600 MHz)	96 GB Main (16MB L2 Cache per processor)	751 x 18 GB 687 x 9.1 GB	0.78 Seconds	220,807.27
Ten (10) Clients: RS/6000 Model 44P-270 (Specification for each)				
4 x Power3 (375 MHz)	4 GB Main (4MB L2 Cache per processor)	1 x 9.1 GB	n/a	n/a

In my opinion, these performance results were produced in compliance with the TPC's requirements for the benchmark. The following verification items were given special attention:

- The database records were the proper size
- The database was properly scaled and populated

1373 North Franklin Street • Colorado Springs, CO 80903-2527 • Office: 719/473-7555 • Fax: 719/473-7554

- The required ACID properties were met
- The transactions were correctly implemented
- Input data was generated according to the specified percentages
- The transaction cycle times included the required keying and think times
- The reported response times were correctly measured.
- All 90% response times were under the specified maximums
- At least 90% of all delivery transactions met the 80 Second completion time limit
- The reported measurement interval was 30 minutes (1800 seconds)
- The reported measurement interval was representative of steady state conditions
- One checkpoint was taken during the reported measurement interval
- The repeatability of the measured performance was verified
- The 180 day storage requirement was correctly computed
- The system pricing was verified for major components and maintenance

Additional Audit Notes:

The measured system included (685) IBM Ultrastar 10K rpm drives (18.2GB disks) that were substituted by (685) IBM Ultrastar 10K rpm drives (9 GB disks) in the priced configuration. Based on the specifications of these disks and on additional performance data collected on these disks, it is my opinion that this substitution does not have a material effect on the reported performance.

Respectfully Yours,

François Raab, President

Bradley J. Askins, Auditor

/*
 *
 * client.h
 *
 *
 * $Revision: 1.6 $
 * $Date: 1998/11/24 21:45:58 $
 * $Log: $
 *
 *
 * $TALog: client.h,v$
 *
 * Revision 1.6 1998/11/24 21:45:58 wenjian
 * - Add MULTIPLE_INTERFACE compile flag
 * [from r1.5 by delta wenjian-23742-TPCC-update-with-Raliegh-code,r1.1]
 *
 *
 * Revision 1.5 1998/11/09 14:48:13 wenjian
 * In an effort to make a new directory structure for TPCC, this delta
 * creates two directories: tpcc/client and tpcc/server. All the files
 * for this revision are copied fromtpcc/sp-tpcc without any change.
 * Further change may be needed for some files due to the change of
 * the directory structure.
 * [added by delta wenjian-23677-TPCC-reorganize-directory-structure,r1.1]
 *
 *
 * Revision 1.10 1998/10/26 14:41:34 dongfeng
 * Add Init command in web client so when something bad happens during
 * initialization web client sends back error information and allows
 * reinitializationinstead of killing IIS server.
 *
 *
 * Define values of initialization errors.
 * [from r1.9 by delta dongfeng-23067-TPCC-add-web-based-tpcc-client,r1.3]
 *
 *
 * Revision 1.9 1998/10/22 20:55:53 wenjian
 * [merge of changes from 1.5 to 1.8 into 1.6]
 *
 *
 * Revision 1.8 1998/10/22 19:18:31 dongfeng
 * [from r1.7 by delta dongfeng-23067-TPCC-add-web-based-tpcc-client,r1.2]
 *
 *
 * Revision 1.7 1998/10/08 14:17:59 dongfeng
 * Add codes for doing web-based tpcc.
 * [from r1.5 by delta dongfeng-23067-TPCC-add-web-based-tpcc-client,r1.1]
 *
 *
 * Revision 1.6 1998/09/26 10:56:25 oz
 * - renamed thread_init and thread_done to clnt_thread_init and
 * clnt_thread_done respectively because of name conflicts onAIX4.3
 * [from r1.5 by delta oz-23339-TPCC-update-for-NT, r1.2]
 *
 *
 * Revision 1.5 1998/01/26 16:19:22 oz
 * - moved all the code pertaining to the background
 * thread to its own file and all the data structures
```

client bg thread.c

<pre> * * client_bg_thread.c * * \$Revision: 1.17 \$ * \$Date: 1999/05/06 21:28:25 \$ * \$Log: \$ * * \$TALog: client_bg_thread.c,v \$ * Revision 1.17 1999/05/06 21:28:25 oz * - Removed all the .. from the includes * - Added -I. to the makefiles instead * - Moved all the thread related code and connection * selection to serverMon.c * [from r1.13 by delta oz-24309-TPCC-add-oracle8.1-code,r1.5] * * Revision 1.13 1999/01/29 20:16:31 wenjian * Small changes to make check_threads more robust * [from r1.12 by delta wenjian-23787-TPCC-integrate-code-for-AIX-and-NT,r1.7] * * Revision 1.12 1998/12/28 20:07:11 wenjian * - Change client_info to a pointer pClientInfo for flexibility. * [from r1.11 by delta wenjian-23788-TPCC-use-single-stats-var-for-each-client-and-server,r1.5] * * Revision 1.11 1998/12/14 20:27:53 wenjian * Made corresponding changes due to data structure change of tran_info_t. * [from r1.10 by delta wenjian-23788-TPCC-use-single-stats-var-for-each-client-and-server,r1.3] * * Revision 1.10 1998/12/11 16:14:18 wenjian * Add code for checking statistic data in a single variable and collecting * statistic data based on iStatsFrequency. * * - Add new check_threads() in order to use the single statistic var. * [from r1.9 by delta wenjian-23788-TPCC-use-single-stats-var-for-each-client-and-server,r1.1] * * Revision 1.9 1998/12/08 23:03:48 wenjian * Add (or rename) Makefile for each platform (AIX and NT). Reorganize the * files a little bit. * * - Change path for tran_stat.h * - Add ifdef before getStatsForm since it is only used by NT * [from r1.8 by delta wenjian-23787-TPCC-integrate-code-for-AIX-and-NT,r1.1] * * Revision 1.8 1998/12/07 20:04:11 wenjian * Clean up * [from r1.7 by delta wenjian-23742-TPCC-update-with-Raliegth-code,r1.2] * * Revision 1.7 1998/11/24 21:45:58 wenjian * - Add #ifdef MULTIPLE_INTERFACE * - Take care special case for check_threads * [from r1.6 by delta wenjian-23742-TPCC-update-with-Raliegth-code,r1.1] * * Revision 1.6 1998/11/09 16:59:35 wenjian * In this revision, most of the changes are related to the directory of header * files after directory reorganization. Other changes include adding or removing * files to put them in the right directories. Makefiles are written for NT * platform so that nmake is working on NT now. Need a top level Makefile for all * the directories. * [from r1.5 by delta wenjian-23677-TPCC-reorganize-directory-structure,r1.2] * * Revision 1.5 1998/11/09 14:48:14 wenjian * In an effort to make a new directory structure for TPCC, this delta * creates two directories: tpcc/client and tpcc/server. All the files * for this revision are copied from tpcc/sp-tpcc without any change. * Further change may be needed for some files due to the change of * the directory structure. * [added by delta wenjian-23677-TPCC-reorganize-directory-structure,r1.1] * * Revision 1.29 1998/11/06 16:10:54 wenjian * - Move gettimeofday() in check_threads out of the for loop * - Minor change for cleanup * [from r1.28 by delta wenjian-23646-TPCC-clean-up-source-code,r1.1] * * Revision 1.28 1998/10/26 15:17:53 dongfeng * remove #include <sys/times.h> from NT tests * [from r1.27 by delta dongfeng-23067-TPCC-add-web-based-tpcc-client,r1.4] * * Revision 1.27 1998/10/22 21:05:37 wenjian * [merge of changes from 1.12 to 1.26 into 1.25] * * Revision 1.26 1998/10/22 19:18:31 dongfeng * [from r1.24 by delta dongfeng-23067-TPCC-add-web-based-tpcc-client,r1.2] * * Revision 1.24 1998/10/08 14:17:59 dongfeng * Add codes for doing web-based tpcc. * [from r1.12 by delta dongfeng-23067-TPCC-add-web-based-tpcc-client,r1.1] * * Revision 1.25 1998/10/08 18:03:00 gerstl * Changes to allow configurations where some servers only service * specific transaction types. Split transaction interfaces by type. * [from r1.23 by delta gerstl-23515-TPCC-allow-separate-online-transaction-interfaces,r1.1] * * Revision 1.23 1998/09/03 16:07:11 wenjian * Change GET_USER_SYS_TIME to GET_CLIENT_USAGE * [from r1.19 by delta wenjian-23183-TPCC-sync-AIX-code-with-Austin,r1.3] * * Revision 1.19 1998/08/18 13:35:41 wenjian * - Clean up including header files </pre>	<pre> * - Remove client_report() and socket_print_rt_avg() * - Use #ifdef for the call of getUserSysTime() * [from r1.16 by delta wenjian-22495-TPCC-add-new-feature-to-monitor-tpcc-clients,r1.7] * * Revision 1.16 1998/07/08 18:15:42 wenjian * Add getUserSysTime(). * [from r1.15 by delta wenjian-22495-TPCC-add-new-feature-to-monitor-tpcc-clients,r1.6] * * Revision 1.15 1998/07/02 18:28:51 wenjian * Change client_status_report to send more information of the * client process. These changes are matched with changes in * tpcc_monitor.c. * [from r1.9 by delta wenjian-22495-TPCC-add-new-feature-to-monitor-tpcc-clients,r1.5] * * Revision 1.7 1998/04/29 19:47:40 wenjian * - Add client_status_report to communicate with tpcc_monitor * - Add socket_print_rt_avg * [from r1.6 by delta wenjian-22495-TPCC-add-new-feature-to-monitor-tpcc-clients,r1.1] * * Revision 1.6 1998/02/17 22:12:40 wenjian * [merge of changes from 1.3 to 1.4 into 1.5] * * Revision 1.4 1998/02/17 16:04:40 oz * - Split the login into two parts to allow for special logins * - If the warehouse ID is 0, this is a special login to * query the client for status * * - check_threads: Return the number of threads * - New function: client_report * [from r1.3 by delta oz-21864-TPCC-split-client-login-screen,r1.1] * * Revision 1.5 1998/02/17 22:06:59 wenjian * Add necessary head files for win32 * [from r1.3 by delta wenjian-21750-TPCC-changes-for-porting-on-NT,r1.1] * * Revision 1.3 1998/01/29 22:53:34 oz * - Use pthread delay instead of sleep * [from r1.2 by delta oz-21749-TPCC-use-pthread-delay-for-bg-thread,r1.1] * * Revision 1.2 1998/01/26 20:37:34 oz * - Remove all the code associated with explicit binding * * - Removed include of mon_client_utils.h * [from r1.1 by delta oz-21697-TPCC-remove-explicit-binding-code,r1.1] * * Revision 1.1 1998/01/26 16:19:22 oz * - moved all the code pertaining to the background * thread to its own file and all the data structures * to client_utils.h * [added by delta oz-21689-TPCC-move-client-bg-thread-to-separate-file,r1.1] * * * */ /* * client_bg_thread * * A file used for debug purposes only. * * * It implements a background thread that once a minute checks the * state of all the threads and reports the state of the client. * * */ #include <stdio.h> #include <stdlib.h> #include <string.h> #include <stdarg.h> #include <time.h> #ifdef WIN32 #include <sys/times.h> /* for getUserSysTime */ #endif #if defined (solaris) #include <dce/pthread.h> #else #include <pthread.h> #endif /* solaris */ #include <tpm/mon/mon.h> #include <utils/trace.h> #include "common/delivery.h" #ifdef MULTIPLE_INTERFACE #include "common/neworder.h" #include "common/payment.h" #include "common/stocklevel.h" #include "common/orderstatus.h" #else #include "common/tpcc_trans.h" #endif #include "common/utilities.h" #include "client_utils.h" #include "common/do_tpcc.h" #include "client.h" #include "encina_client.h" #include "tools/tran_stat.h" #include "common/get_local_time.h" #ifdef WIN32 #define read(A,B,C) recv(A,B,C,0) #define write(A,B,C) send(A,B,C,0) </pre>

/*
 *
 * client_listen.c
 *
 *
 * $Revision: 1.8 $
 * $Date: 1999/05/06 21:28:26 $
 * $Lo: $
 *
 *
 * $TALog: client_listen.c,v$
 * Revision 1.8 1999/05/06 21:28:26 oz
 * - Removed all the .. from the includes
 * - Added -L. to the makefiles instead
 * - Moved all the thread related code and connection
 * selection to serverMon.c
 * [from r1.7 by delta oz-24309-TPCC-add-oracle8.1-code, r1.5]
 *
 *
 * Revision 1.7 1999/01/29 20:16:32 wenjian
 * Change logprintf to err_printf
 * [from r1.6 by delta wenjian-23787-TPCC-integrate-code-for-AIX-and-NT, r1.7]
 *
 *
 * Revision 1.6 1998/11/09 16:59:36 wenjian
 * In this revision, most of the changes are related to the directory of header
 * files after directory reorganization. Other changes include adding or removing
 * files to put them in the right directories. Makefiles are written for NT
 * platform so that nmake is working on NT now. Need a top level Makefile for all
 * the directories.
 * [from r1.5 by delta wenjian-23677-TPCC-reorganize-directory-structure, r1.2]
 *
 *
 * Revision 1.5 1998/11/09 14:48:14 wenjian
 * In an effort to make a new directory structure for TPCC, this delta
 * creates two directories: tpcc/client and tpcc/server. All the files
 * for this revision are copied from tpcc/sp-tpcc without any change.
 * Further change may be needed for some files due to the change of
 * the directory structure.
 * [added by delta wenjian-23677-TPCC-reorganize-directory-structure, r1.1]
 *
 *
 * Revision 1.30 1998/09/26 10:56:25 oz
 * - renamed thread_init and thread_done to clnt_thread_init and
 * clnt_thread_done respectively because of name conflicts on AIX4.3
 * [from r1.22 by delta oz-23339-TPCC-update-for-NT, r1.2]
 *
 *
 * Revision 1.22 1998/08/18 14:38:38 wenjian
 * Minor change
 * [from r1.18 by delta wenjian-21750-TPCC-changes-for-porting-on-NT, r1.4]
 *
 *
 * Revision 1.18 1998/04/29 19:47:41 wenjian
 * - Use fd instead of stream on NT
 * - Add code to consider tpcc_monitor as a special client login
 * - Use TRY and CATCH_ALL to deal with exceptions
 * [from r1.17 by delta wenjian-22495-TPCC-add-new-feature-to-monitor-tpcc-clients, r1.1]
 *
 *
 * Revision 1.17 1998/02/17 22:13:28 wenjian
 * [merge of changes from 1.14 to 1.15 into 1.16]
 *
 *
 * Revision 1.15 1998/02/17 16:04:41 oz
 * - Split the login into two parts to allow for special logins
 * - If the warehouse ID is 0, this is a special login to
 * query the client for status
 *
 *
 * - First, login
 * - If the w_id is bigger than 0: normal thread.
 * - Otherwise, call client_report.
 * [from r1.14 by delta oz-21864-TPCC-split-client-login-screen, r1.1]
 *
 *
 * Revision 1.16 1998/02/17 22:06:59 wenjian
 * Add head files and define macros for win32
 * [from r1.14 by delta wenjian-21750-TPCC-changes-for-porting-on-NT, r1.1]
 *
 *
 * Revision 1.14 1998/01/28 22:24:48 oz
 * [from r1.13 by delta oz-20774-TPCC-update-to-latest-SP-version-11-27, r1.4]
 *
 *
 * Revision 1.13 1998/01/26 16:19:22 oz
 * - moved all the code pertaining to the background
 * thread to its own file and all the data structures
 * to client_utils.h
 * [from r1.12 by delta oz-21689-TPCC-move-client-bg-thread-to-separate-file, r1.1]
 *
 *
 * Revision 1.12 1998/01/24 14:17:04 oz
 * - User server name to identify server and name delivery file
 * - Use env variable HOME instead of /home/encina if HOME is set
 *

```

```

* - Print the thread ID on thread exit as well
* [from r1.11 by delta oz-21687-TPCC-use-server-name-to-identify-process,r1.1]
*
* Revision 1.11 1998/01/23 15:07:44 oz
* - Updated the SP TPCC directory to the latest files used
* during the SP tpcc audit.
* [from r1.10 by delta oz-20774-TPCC-update-to-latest-SP-version-11-27, r1.1]
*
*
* Exported functions:
*     make_connections
*
* Private functions:
*     process_terminal
*
*/

/* client_listen.c
* Code in the client that listens for requests from the
* terminal processes and submits them for processing.
*
* There is one listening function:make_connection.
* That function calls cnm_ManageConnection which never returns
* and so it is best to call it in its own independent thread.
*
* As soon as cnm_ManageConnections receives a connection it
* starts a new thread and calls process_terminal in that
* thread passing in the file descriptor for the new connection.
*
* Note that the client does not need to know in advance how many
* terminals it will talk to.
*
* The function process_terminal reads initializes the thread
* and then calls client_init to process all the requests from
* that terminal.
*/

* $Revision: 1.5 $
* $Date: 1998/11/09 14:48:14 $
* $Log: $
*
* $TALog: client_listen.h,v$
* Revision 1.5 1998/11/09 14:48:14 wenjian
* In an effort to make a new directory structure for TPCC, this delta
* creates two directories: tpcc/client and tpcc/server. All the files
* for this revision are copied from tpcc/sp-tpcc without any change.
* Further change may be needed for some files due to the change of
* the directory structure.
* [added by delta wenjian-23677-TPCC-reorganize-directory-structure,r1.1]
*
* Revision 1.1 1997/04/20 11:57:55 oz
* - This is the code base modified at IBM Poughkeepsie
* by Ofer Zajicek and Radha Sivaramakrishnan for the
* SP scaling test for TPCC.
* [added by delta oz-19782-TPCC-add-ibm-sp-code, r1.1]
*
* Revision 1.1 1995/07/09 18:12:10 oz
* - Modified the client side of the TPCC benchmark to have multithreaded
* clients. There is a terminal process for each terminal -- when
* not using the terminal emulator each terminal process emulates one

```

```

* terminal. The terminal processes communication with the client
* process using a unix socket.
*
* On the client side there is a thread for each terminal process.
* That thread receives the request from the terminal and puts it on
* a queue. There is one processing thread that dequeues the requests
* and sends them to the server for processing.
* [added by delta oz-15875-TPCC-reduce-the-number-of-clients,r1.1]
*
*
*/

```

```

* client_listen.h

 *
 * client_utils.c
 *
 * $Revision: 1.9 $
 * $Date: 1999/05/06 21:28:26 $
 * $Log: $
 *
 *
 * $TALog: client_utils.c,v $
 * Revision 1.9 1999/05/06 21:28:26 oz
 * - Removed all the .. from the includes
 * - Added -L.. to the makefiles instead
 * - Moved all the thread related code and connection
 * selection to serverMon.c
 * [from r1.7 by delta oz-24309-TPCC-add-oracle8.1-code, r1.5]
 *
 * Revision 1.7 1998/12/11 16:37:57 wenjian
 * Move some common functions from client/client_utils.cto common/tpcc_utils.c.
 * In this version, we only move time_diff_ms(). Need some work in order to
 * move other functions like ERROUT.
 *
 * - Move time_diff_ms() to common/tpcc_utils.c
 * [from r1.6 by delta wenjian-23788-TPCC-use-single-stats-var-for-each-client-and-server, r1.2]
 *
 * Revision 1.6 1998/11/09 16:59:36 wenjian
 * In this revision, most of the changes are related to the directory of header
 * files after directory reorganization. Other changes include adding or removing
 * files to put them in the right directories. Makefiles are written for NT
 * platform so that nmake is working on NT now. Need a top level Makefile for all
 * the directories.
 * [from r1.5 by delta wenjian-23677-TPCC-reorganize-directory-structure, r1.2]
 *
 * Revision 1.5 1998/11/09 14:48:14 wenjian
 * In an effort to make a new directory structure for TPCC, this delta
 * creates two directories: tpcc/client and tpcc/server. All the files
 * for this revision are copied from tpcc/sp-tpcc without any change.
 * Further change may be needed for some files due to the change of
 * the directory structure.
 * [added by delta wenjian-23677-TPCC-reorganize-directory-structure, r1.1]
 *
 * Revision 1.9 1998/10/08 14:18:00 dongfeng
 * Add codes for doing web-based tpcc.
 * [from r1.7 by delta dongfeng-23067-TPCC-add-web-based-tpcc-client, r1.1]
 *
 * Revision 1.7 1998/04/29 19:47:42 wenjian
 * - Add prefix_sprintf
 * - Remove ENCINA_C_CALLING_CONVENTION from err_printf
 * [from r1.6 by delta wenjian-22495-TPCC-add-new-feature-to-monitor-tpcc-clients, r1.1]
 *
 * Revision 1.6 1998/02/17 22:07:00 wenjian
 * Minor changes for NT
 */

 */

```

```

*
*
* $TALog: client_utils.h.v$
* Revision 1.11 1999/05/06 21:28:26 oz
* - Removed all the .. from the includes
* - Added -I.. to the makefilesinstead
* - Moved all the thread related code and connection
* selection to serverMon.c
* [from r1.8 by delta oz-24309-TPCC-add-oracle8.1-code, r1.5]
*
* Revision 1.8 1998/12/14 20:27:54 wenjian
* Made corresponding changes due to data structure change of tran_info_t.
*
* - Change data structure tran_info_t
* [from r1.7 by delta wenjian-23788-TPCC-use-single-stats-var-for-each-client-and-server, r1.3]
*
* Revision 1.7 1998/12/11 16:14:19 wenjian
* Add code for checking statistic data in a single variable and collecting
* statistic data based on iStatsFrequency.
*
* - Add total_num_trans to tran_info_t;
* [from r1.6 by delta wenjian-23788-TPCC-use-single-stats-var-for-each-client-and-server, r1.1]
*
* Revision 1.6 1998/11/09 16:59:37 wenjian
* In this revision, most of the changes are related to the directory of header
* files after directory reorganization. Other changes include adding or removing
* files to put them in the right directories. Makefiles are written for NT
* platform so that nmake is working on NT now. Need a top level Makefile for all
* the directories.
* [from r1.5 by delta wenjian-23677-TPCC-reorganize-directory-structure, r1.2]
*
* Revision 1.5 1998/11/09 14:48:15 wenjian
* In an effort to make a new directory structure for TPCC, this delta
* creates two directories: tpcc/client and tpcc/server. All the files
* for this revision are copied fromtpcc/sp-tpcc without any change.
* Further change may be needed for some files due to the change of
* the directory structure.
* [added by delta wenjian-23677-TPCC-reorganize-directory-structure, r1.1]
*
* Revision 1.4 1998/11/09 14:26:51 wenjian
* Change enc_status to a data structure that has fields:
* - Status code
* - Line Number
* - File Name
* - Encina Error Code
* - Error Msg
* Remove statusMsgs in web_tpcc.c
*
* Add definition of enc_status_t
* [from r1.19 by delta dongfeng-23067-TPCC-add-web-based-tpcc-client, r1.6]
*
* Revision 1.19 1998/10/22 21:13:07 wenjian
* [merge of changes from 1.11 to 1.18 into 1.14]
*
* Revision 1.18 1998/10/22 19:18:32 dongfeng
* [from r1.17 by delta dongfeng-23067-TPCC-add-web-based-tpcc-client, r1.2]
*
* Revision 1.17 1998/10/08 14:18:00 dongfeng
* Add codes for doing web-based tpcc.
* [from r1.11 by delta dongfeng-23067-TPCC-add-web-based-tpcc-client, r1.1]
*
* Revision 1.14 1998/08/18 14:38:39 wenjian
* Minor change
* [from r1.13 by delta wenjian-21750-TPCC-changes-for-porting-on-NT, r1.4]
*
* Revision 1.13 1998/08/18 13:35:42 wenjian
* Remove NUM_NEXT_REPORTS since it is no use.
* [from r1.11 by delta wenjian-22495-TPCC-add-new-feature-to-monitor-tpcc-clients, r1.7]
*
* Revision 1.11 1998/06/17 15:28:51 wenjian
* Add 'double time' instruct total_tran_count_t.
* [from r1.10 by delta wenjian-22495-TPCC-add-new-feature-to-monitor-tpcc-clients, r1.2]
*
* Revision 1.10 1998/04/29 19:47:43 wenjian
* - Define ENDMSG marking the end of socket message between tpcc_client
* and tpcc_monitor
* - Remove ENCINA_C_CALLING_CONVENTION from err_printf
* [from r1.9 by delta wenjian-22495-TPCC-add-new-feature-to-monitor-tpcc-clients, r1.1]
*
* Revision 1.9 1998/02/17 22:13:41 wenjian
* [merge of changes from 1.6 to 1.7 into 1.8]
*
* Revision 1.7 1998/02/17 16:04:41 oz
* - Split the login into two parts to allow for special logins
* - If the warehouse ID is 0, this is a special login to
* query the client for status
* [from r1.6 by delta oz-21864-TPCC-split-client-login-screen, r1.1]
*
* Revision 1.8 1998/02/17 22:07:00 wenjian
* Minor changes for NT
* [from r1.6 by delta wenjian-21750-TPCC-changes-for-porting-on-NT, r1.1]
*
* Revision 1.6 1998/01/26 16:43:32 oz
* - Removed the code for collecting stats in the client
* and dumping them before exit.
*
* - Removed timeP and time_allocated from thread_info_t
* [from r1.5 by delta oz-21691-TPCC-remove-client-stats-code, r1.1]
*
* Revision 1.5 1998/01/26 16:19:23 oz
* - moved all the code pertaining to the background
* thread to its own file and all the data structures
* to client_utils.h
* [from r1.4 by delta oz-21689-TPCC-move-client-bg-thread-to-separate-file, r1.1]
*
* Revision 1.4 1998/01/23 15:07:47 oz
* - Updated the SP TPCC directory to the latest files used
* during the SP tpcc audit.
* [from r1.3 by delta oz-20774-TPCC-update-to-latest-SP-version-11-27, r1.1]
*

 * $Revision: 1.1 $
 * $Date: 1998/11/06 21:10:11 $
 * $Log: databuf.h,v $
 * Revision 4.2 95/05/16 10:55:31 10:55:31 tpcc (TPCC Benchmark)
 * Added necessary RCS ident strings
 *
 * Revision 4.1 95/05/09 15:21:02 15:21:02 strue (Scott Truesdale)
 * New code from Transarc - initial version
 *
 * Revision 3.2 95/04/03 17:43:09 17:43:09 strue (Scott Truesdale)
 * Changes from Transarc - added sql error handling in client; cleaned up debug handling with macros; added
 * check on db paramters via call to server.
 *
 * Revision 3.1 95/04/03 15:10:30 15:10:30 strue (Scott Truesdale)
 * Base of rev 3 - shipped to transarc
 *
 *
 *
 *
 * $TALog: databuf.h,v $
 * Revision 1.1 1998/11/06 21:10:11 dongfeng
 * - Move all files common to client and server to tpcc/common
 * directory
 * [added by delta dongfeng-23677-TPCC-new-directory-structures, r1.1]
 *
 * Revision 1.3 1998/10/22 15:33:04 wenjian
 * Make changes to Encina server code to connect with SQL server and add
 * callsql.c and sql directory.
 *
 * Add ERR_BAD_ITEM_ID, which is returned by SLQnew and same as INVALID_NEWO
 * [from r1.2 by delta wenjian-23529-TPCC-integrate-with-SQL-server, r1.1]
 *
 * Revision 1.2 1998/01/23 15:07:47 oz
 * - Updated the SP TPCC directory to the latest files used
 *
 * during the SP tpcc audit.
 * [from r1.1 by delta oz-20774-TPCC-update-to-latest-SP-version-11-27, r1.1]
 *
 * Revision 1.1 1997/04/20 11:57:57 oz
 * - This is the code base modified at IBM Poughkeepsie
 * by Ofer Zajicek and Radha Sivaramakrishnan for the
 * SP scaling test for TPCC.
 * [added by delta oz-19782-TPCC-add-ibm-sp-code, r1.1]
 *
 * Revision 1.31 1995/10/30 19:10:54 oz
 * [merge of changes from 1.29 to 1.30 into 1.27]
 *
 * Revision 1.30 1995/10/27 15:41:30 oz
 * - Modified the tpc-c code to work with the new informix
 * sql code that is in ex_trans.ec
 * [from r1.29 by delta oz-16761-TPCC-modify-code-to-work-with-oracle, r1.1]
 *
 * Revision 1.27 1995/10/20 18:44:30 ctipper
 * [merge of changes from 1.17 to 1.25 into 1.22]
 *
 * Revision 1.25 1995/10/20 18:15:34 ctipper
 * Incorporate changes per code review.
 *
 * - add DISTRIBUTED_TRAN_FAILED, TPCC_DB_INFO_PARTIAL, and
 * TPCC_DB_INFO_FAILED error codes to tpcc_rc_t
 * - got rid of MAX_NUM_SERVERS variables
 * [from r1.23 by delta ctipper-16547-TPCC-more-distributed-trans, r1.2]
 *
 * Revision 1.23 1995/10/13 17:00:26 ctipper
 * This delta encompasses all changes necessary to do distributed,XA
 * transactions with the TPCC benchmark. This includes the changes
 * necessary to build with Informix version 6.
 *
 * Each client still talks to only one server, however, if a distributed
 * transaction is necessary, the client sends the request to a different
 * interface of that server which then forwards all or part of the
 * request on to the appropriate remote server.
 *
 * - added new error codes to the tpcc_rc_t enumeration.
 * - defined MAX_NUM_SERVERS to be 10
 * [from r1.19 by delta ctipper-16547-TPCC-more-distributed-trans, r1.1]
 *
 * Revision 1.19 1995/09/20 21:02:39 oz
 * -Corrected code for the payment transaction
 * - The distributed case now no longer uses
 * stored procedures
 * [from r1.18 by delta oz-16547-TPCC-add-distributed-transactions, r1.2]
 *
 * Revision 1.18 1995/09/20 17:51:10 oz
 * - Added distributed transactions for the new order and
 * payment transaction
 *
 * - Added new error codes
 * [from r1.17 by delta oz-16547-TPCC-add-distributed-transactions, r1.1]
 *
 * Revision 1.22 1995/10/02 20:31:07 oz
 * - Corrected definition of ERROR()
 * [from r1.21 by delta oz-16638-tpcc-modify-terminal-for-RTE, r1.3]
 *
 * Revision 1.21 1995/10/02 18:51:45 oz
 * - Added definitions needed for utils.c and liberty.c
 * [from r1.20 by delta oz-16638-tpcc-modify-terminal-for-RTE, r1.2]
 *
 * Revision 1.20 1995/10/02 15:52:35 oz
 * - Modified the TPC-C benchmark to be compatible with the RTE.
 * - There are now 3 terminal processes:
 * emulator: the old terminal process with a built in
 * simple emulator
 * curses: An interactive terminal process using curses
 * liberty: An interactive terminal process to be used with
 * the RTE compatible with the liberty freedom terminal.
 *
 * - Define TRUE and FALSE only if they are not already defined.
 * (curses.h defines TRUE)
 * - Removed READ_TO_DATE and YEAR_TO_SECOND
 * - Added term_type_t
 * - Added
 * GOOD_INPUT (0)
 * WRONG_INPUT (10)
 * [from r1.17 by delta oz-16638-tpcc-modify-terminal-for-RTE, r1.1]
 *
 * Revision 1.17 1995/07/28 15:28:23 oz
 * - Added a -null and -no_marshall option to TPCC
 *
 * - Added INVALID_TRAN_TYPE return code
 * [from r1.16 by delta oz-16070-TPCC-add-null-and-marshalling-test, r1.1]
 *
 * Revision 1.16 1995/07/18 17:02:38 oz
 * - Added a DCE_ERROR error code
 * [from r1.15 by delta oz-15938-TPCC-add-dce-only-client, r1.1]
 *
 * Revision 1.15 1995/05/22 19:50:48 shl
 * [merge of changes from 1.12 to 1.13 into 1.14]
 *
 * Revision 1.13 1995/05/18 15:11:27 oz
 * [from r1.12 by delta oz-15290-TPCC-incorporate-hp-drop-of-05-16-95, r1.1]
 *
 * Revision 1.14 1995/05/22 17:26:35 ctipper
 * [merge of changes from 1.5 to 1.9 into 1.11]

 * $Revision: 1.7 $
 * $Date: 1999/05/06 21:28:26 $
 * $Log:
 *
 * $TALog: encina_client.c,v$
 * Revision 1.7 1999/05/06 21:28:26 oz
 * - Removed all the .. from the includes
 * - Added -L. to the makefiles instead

```

```

* - Moved all the thread related code and connection
*   selection to serverMon.c
* [from r1.6 by delta oz-24309-TPCC-add-oracle8.1-code, r1.5]
*
* Revision 1.6 1998/11/09 16:59:37 wenjian
* In this revision, most of the changes are related to the directory of header
* files after directory reorganization. Other changes include adding or removing
* files to put them in the right directories. Makefiles are written for NT
* platform so that nmake is working on NT now. Need a top level Makefile for all
* the directories.
* [from r1.5 by delta wenjian-23677-TPCC-reorganize-directory-structure, r1.2]
*
* Revision 1.5 1998/11/09 14:48:16 wenjian
* In an effort to make a new directory structure for TPCC, this delta
* creates two directories: tpcc/client and tpcc/server. All the files
* for this revision are copied from tpcc/sp-tpcc without any change.
* Further change may be needed for some files due to the change of
* the directory structure.
* [added by delta wenjian-23677-TPCC-reorganize-directory-structure, r1.1]
*
* Revision 1.5 1998/01/23 15:07:51 oz
* - Updated the SP TPCC directory to the latest files used
* during the SP tpcc audit.
* [from r1.4 by delta oz-20774-TPCC-update-to-latest-SP-version-11-27, r1.1]

/*
 *      mon_client.c
 *
 * $Revision: 1.27 $
 * $Date: 1999/05/26 16:29:52 $
 * $Log: $
 *
 * $TALog: mon_client.c,v $
 * Revision 1.27 1999/05/26 16:29:52 wenjian
 * Sync with Austin code, and sync code for OracleDB and SQL server.
 * [from r1.26 by delta wenjian-24433-TPCC-clean-up-and-update,r1.2]
 *
 * Revision 1.26 1999/05/06 21:28:26 oz
 * - Removed all the .. from the includes
 * - Added -L. to the makefiles instead
 * - Moved all the thread related code and connection
 *   selection to serverMon.c
 * [from r1.16 by delta oz-24309-TPCC-add-oracle8.1-code, r1.5]
 *
 * Revision 1.16 1999/01/29 20:16:33 wenjian
 * - Rename client_init to init_encina_client because we have another
 *   client_init in screen/client.C
 * - Add code to read StatsFrequency from .tpccrc (UNIX only)
 * [from r1.15 by delta wenjian-23787-TPCC-integrate-code-for-AIX-and-NT, r1.7]
 *
 * Revision 1.15 1999/01/12 20:52:55 wenjian
 * Call initialization function to create the shared file mapping between
 * it and the corresponding dll.
 * [from r1.14 by delta wenjian-23856-TPCC-integrate-with-NT-performance-monitor, r1.1]
 *
 * Revision 1.14 1998/12/28 20:07:12 wenjian
 * - Change client_info to a pointer pClientInfo for flexibility.
 * [from r1.13 by delta wenjian-23788-TPCC-use-single-stats-var-for-each-client-and-server, r1.5]
 *
 * Revision 1.13 1998/12/16 17:17:41 wenjian
 * - Change (iStatsFrequency <= 1) to (iStatsFrequency < 1) in pre_rpc.
 * [from r1.12 by delta wenjian-23788-TPCC-use-single-stats-var-for-each-client-and-server, r1.4]
 *
 * Revision 1.12 1998/12/14 20:27:54 wenjian
 * Made corresponding changes due to data structure change of tran_info_t.
 * [from r1.11 by delta wenjian-23788-TPCC-use-single-stats-var-for-each-client-and-server, r1.3]
 *
 * Revision 1.11 1998/12/11 16:14:19 wenjian

```

<ul style="list-style-type: none"> * Add code for checking statistic data in a single variable and collecting statistic data based on iStatsFrequency. * - Add code to store statistic data in a single var * - Collect statistic data once every iStatsFrequency transactions * [from r1.10 by delta wenjian-23788-TPCC-use-single-stats-var-for-each-client-and-server,r1.1] * Revision 1.10 1998/12/08 23:03:49 wenjian * Add (or rename) Makefile for each platform (AIX and NT). Reorganize the files a little bit. * - Define variable iStatsFrequency for AIX * [from r1.9 by delta wenjian-23787-TPCC-integrate-code-for-AIX-and-NT,r1.1] * Revision 1.9 1998/12/08 18:55:19 wenjian * In pre_rpc, set headerP->stats to iStatsFrequency * [from r1.8 by delta wenjian-23785-TPCC-pass-statsFrequency-from-client-to-server,r1.1] * Revision 1.8 1998/12/07 20:04:12 wenjian * Clean up * [from r1.7 by delta wenjian-23742-TPCC-update-with-Raleigh-code,r1.2] * Revision 1.7 1998/11/24 21:45:59 wenjian * - Add #ifdef MULTIPLE_INTERFACE * - Check if we need to collect statistics for response time * - Do mutex_lock for terminal_context_init * [from r1.6 by delta wenjian-23742-TPCC-update-with-Raleigh-code,r1.1] * Revision 1.6 1998/11/09 16:59:38 wenjian * In this revision, most of the changes are related to the directory of header files after directory reorganization. Other changes include adding or removing files to put them in the right directories. Makefiles are written for NT platform so that nmake is working on NT now. Need a top level Makefile for all the directories. * [from r1.5 by delta wenjian-23677-TPCC-reorganize-directory-structure,r1.2] * Revision 1.5 1998/11/09 14:48:16 wenjian * In an effort to make a new directory structure for TPCC, this delta creates two directories: tpcc/client and tpcc/server. All the files for this revision are copied from tpcc/sp-tpcc without any change. * Further change may be needed for some files due to the change of the directory structure. * [added by delta wenjian-23677-TPCC-reorganize-directory-structure,r1.1] * Revision 1.43 1998/11/06 16:10:55 wenjian * - Minor change to reduce the print statement * [from r1.42 by delta wenjian-23646-TPCC-clean-up-source-code,r1.1] * Revision 1.42 1998/10/27 14:57:51 dongfeng * Change enc_status to a data structure that has fields: * - Status code * - Line Number * - File Name * - Encina Error Code * - Error Msg * Remove statusMsgs in web_tpcc.c * [from r1.41 by delta dongfeng-23067-TPCC-add-web-based-tpcc-client,r1.6] * Revision 1.41 1998/10/26 14:41:34 dongfeng * Add Init command in web client so when something bad happens during initialization web client sends back error information and allows reinitialization instead of killing IIS server. * Define Macro CHK_STATUS instead of using #ifdef * [from r1.40 by delta dongfeng-23067-TPCC-add-web-based-tpcc-client,r1.3] * Revision 1.40 1998/10/22 21:24:11 wenjian * [merge of changes from 1.23 to 1.39 into 1.38] * Revision 1.39 1998/10/22 19:18:34 dongfeng * [from r1.37 by delta dongfeng-23067-TPCC-add-web-based-tpcc-client,r1.2] * Revision 1.37 1998/10/08 14:18:01 dongfeng * Add codes for doing web-based tpcc. * [from r1.23 by delta dongfeng-23067-TPCC-add-web-based-tpcc-client,r1.1] * Revision 1.38 1998/10/08 18:03:01 gerstl * Changes to allow configurations where some servers only service specific transaction types. Split transaction interfaces by type. * [from r1.36 by delta gerstl-23515-TPCC-allow-separate-online-transaction-interfaces,r1.1] * Revision 1.36 1998/10/07 15:14:22 gerstl * [merge of changes from 1.26 to 1.31 into 1.34] * Revision 1.31 1998/09/04 19:17:56 wenjian * Remove log_file_handle and related code. * [from r1.29 by delta wenjian-23183-TPCC-sync-AIX-code-with-Austin,r1.5] * Revision 1.29 1998/08/28 18:30:00 wenjian * This delta sync the TPCC code with Austin. * Remove UNCOND_EVENT in CALLTPCC, pre_rpc and post_rpc. * [from r1.26 by delta wenjian-23183-TPCC-sync-AIX-code-with-Austin,r1.1] * Revision 1.34 1998/09/26 10:56:26 oz * - renamed thread_init and thread_done to clnt_thread_init and clnt_thread_done respectively because of name conflicts on AIX 4.3 * [from r1.26 by delta oz-23339-TPCC-update-for-NT,r1.2] 	<ul style="list-style-type: none"> * Revision 1.26 1998/08/18 14:38:41 wenjian * Remove adl.h from this file since it is not ported on NT. Use corresponding rpc protect levels and authz levels to replace ADL_... macros defined in adl.h * [from r1.23 by delta wenjian-21750-TPCC-changes-for-porting-on-NT,r1.4] * Revision 1.23 1998/06/17 15:05:45 wenjian * Somehow, read and write didn't work for socket on NT, although they are supposed to work. As a work-around way, use recv and send for NT in this revision. We may change them back if the problem is gone. * Define SKIP_RPC and add code to do tests without calling DCE. * This addition is for test purpose only. * [from r1.22 by delta wenjian-21750-TPCC-changes-for-porting-on-NT,r1.2] * Revision 1.22 1998/02/17 22:13:49 wenjian * [merge of changes from 1.19 to 1.20 into 1.21] * Revision 1.20 1998/02/17 16:04:42 oz * - Split the login into two parts to allow for special logins * - If the warehouse ID is 0, this is a special login to query the client for status * - Keep track of threads that have been initialized and also threads that are done. * [from r1.19 by delta oz-21864-TPCC-split-client-login-screen,r1.1] * Revision 1.21 1998/02/17 22:07:03 wenjian * Minor changes for NT * [from r1.19 by delta wenjian-21750-TPCC-changes-for-porting-on-NT,r1.1] * Revision 1.19 1998/01/26 20:37:35 oz * - Remove all the code associated with explicit binding * - Removed GET_SERVER_INDEX * - Removed bindingType * - Removed explicit binding from CALLTPCC * - Removed calls to cancel_all_reservations and to init_handles * [from r1.18 by delta oz-21697-TPCC-remove-explicit-binding-code,r1.1] * Revision 1.18 1998/01/26 16:43:32 oz * - Removed the code for collecting stats in the client and dumping them before exit. * - Removed pre_rpc_stats and post_rpc_stats * - Removed code to write the stats out * [from r1.17 by delta oz-21691-TPCC-remove-client-stats-code,r1.1] * Revision 1.17 1998/01/26 16:19:23 oz * - moved all the code pertaining to the background thread to its own file and all the data structures to client_utils.h * [from r1.16 by delta oz-21689-TPCC-move-client-bg-thread-to-separate-file,r1.1] * Revision 1.16 1998/01/26 15:33:32 oz * - call impTPCCNOInfo to make sure there is a server out there * [from r1.15 by delta oz-21671-TPCC-merge-online-transaction-interfaces,r1.2] * Revision 1.15 1998/01/23 21:58:51 oz * - In order to simplify the Encina TPCC code: Merge the four online transactions into 1 interface * - Moved all the scripts to a scripts subdirectory * - Removed unused files * [from r1.14 by delta oz-21671-TPCC-merge-online-transaction-interfaces,r1.1] * Revision 1.14 1998/01/23 15:07:53 oz * - Updated the SP TPCC directory to the latest files used during the SP tpcc audit. * [from r1.13 by delta oz-20774-TPCC-update-to-latest-SP-version-11-27,r1.1] * */ #include "common/get_local_time.h" #include <stdio.h> #include <stdlib.h> #include <string.h> #include <stdarg.h> #include <time.h> #if defined (solaris) #include <dce/pthread.h> else /* solaris */ #include <pthread.h> #endif /* solaris */ #include <tpm/mon/mon.h> #include <utils/trace.h> #include "common/delivery.h" #ifdef MULTIPLE_INTERFACE #include "common/neworder.h" #include "common/payment.h" #include "common/stocklevel.h" #include "common/orderstatus.h" else #include "common/tpcc_trans.h" #endif #include "common/utilities.h" #include "client_utils.h" #include "common/do_tpcc.h"

server.c

/*
 * server.c
 *
 * $Revision: 1.11 $
 * $Date: 1999/05/06 21:28:30 $
 * $Log: server.c,v $
 *
 * $TALog: server.c,v $
 * Revision 1.11 1999/05/06 21:28:30 oz
 * - Removed all the .. from the includes
 * - Added -L. to the makefiles instead
 * - Moved all the thread related code and connection
 * selection to serverMon.c
 * [from r1.10 by delta oz-24309-TPCC-add-oracle8.1-code, r1.5]
 *
 * Revision 1.10 1999/04/19 20:14:48 oz
 * - Moved all the simulated code to server.c
 * - Created nulldb.c for compilation with no DB
 * [from r1.8 by delta oz-24331-TPCC-move-sim-code-to-common-file,r1.1]
 *
 * Revision 1.9 1999/04/14 18:11:56 wenjian
 * Make changes so that the web client data structures for transactions
 * are same as the data structures used in SQL server. It is an important
 * change to integrate with MS TPCC kit. It will also avoid copyin/copyout
 * for each transaction.

```

server.c

```

* [from r1.8 by delta wenjian-24134-TPCC-make-client-data-structure-same-as-server,r1.1]
*
* Revision 1.8 1998/12/11 16:37:58 wenjian
* Move some common functions from client/client_utils.c to common/tpcc_utils.c.
* In this version, we only movetime_diff_ms(). Need some work in order to
* move other functions like ERROUT.
*
* - Move time_diff_ms() to common/tpcc_utils.c
* [from r1.7 by delta wenjian-23788-TPCC-use-single-stats-var-for-each-client-and-server, r1.2]
*
* Revision 1.7 1998/12/11 16:14:20 wenjian
* Add code for checking statistic data in a single variable and collecting
* statistic data based on iStatsFrequency.
*
* - Add time_diff_ms()
* [from r1.6 by delta wenjian-23788-TPCC-use-single-stats-var-for-each-client-and-server, r1.1]
*
* Revision 1.6 1998/11/09 16:59:47 wenjian
* In this revision, most of the changes are related to the directory of header
* files after directory reorganization. Other changes include adding or removing
* files to put them in the right directories. Makefiles are written for NT
* platform so that nmake is working on NT now. Need a top level Makefile for all
* the directories.
* [from r1.5 by delta wenjian-23677-TPCC-reorganize-directory-structure,r1.2]
*
* Revision 1.5 1998/11/09 14:48:24 wenjian
* In an effort to make a new directory structure for TPCC, this delta
* creates two directories: tpcc/client and tpcc/server. All the files
* for this revision are copied from tpcc/sp-tpcc without any change.
* Further change may be needed for some files due to the change of
* the directory structure.
* [added by delta wenjian-23677-TPCC-reorganize-directory-structure,r1.1]
*
* Revision 1.13 1998/11/06 16:10:56 wenjian
* - Change num_mults from 5 to 20
* [from r1.12 by delta wenjian-23646-TPCC-clean-up-source-code,r1.1]
*
* Revision 1.12 1998/10/22 16:25:12 wenjian
* Multi-threaded version.
*
* - Define deliLog for the output of delivery server
* - Stop printing to stderr in err_printf() since it seems to be too
  expensive on NT. Print to file instead.
* [from r1.11 by delta wenjian-23529-TPCC-integrate-with-SQL-server,r1.2]
*
* Revision 1.11 1998/06/17 15:05:48 wenjian
* Somehow, read and write didn't work for socket on NT, although they
* are supposed to work. As a work-around way, use recv and send for
* NT in this revision. We may change them back if the problem is gone.
*
* Use recv and send for socket read and write.
* [from r1.10 by delta wenjian-21750-TPCC-changes-for-porting-on-NT,r1.2]
*
* Revision 1.10 1998/02/17 22:07:06 wenjian
* Define macros to deal with the different function names on NT
* [from r1.9 by delta wenjian-21750-TPCC-changes-for-porting-on-NT,r1.1]
*
* Revision 1.9 1998/01/23 15:08:48 oz
* - Updated the SP TPCC directory to the latest files used
* during the SP tpcc audit.
* [from r1.8 by delta oz-20774-TPCC-update-to-latest-SP-version-11-27, r1.1]
*
*/
/*
 *
 * TPCC Server
 *
 * There are currently three versions of the TPCC benchmark
 * implemented here: An Encina monitor based benchmark,
 * an Encina Toolkit based benchmark and a DCE only benchmark.
 *
 * This file, server.c, contains all the code that is common to
 * all the versions. Each server has its own main file:
 * serverMon.c for the monitor server, serverTK.c for the toolkit
 * server and serverDce.c for the dce server.
 *
 * Each server is comprised of three main modules: the serverspecific
 * one (mentioned above), the common one, in this file, and the
 * server part, which is in the SQL files DBInfo.ec, dbInit.ec,
 * delivery.ec, newOrder.ec, orderStatus.ec, payment.ec, stockLevel.ec.

 * $Revision: 1.11 $
 * $Date: 1999/05/06 21:28:31 $
 * $Log: $
 *
 *
 * $TALog: server.h,v $
 * Revision 1.11 1999/05/06 21:28:31 oz
 * - Removed all the .. from the includes
 * - Added -L. to the makefiles instead
 * - Moved all the thread related code and connection
 *   selection to serverMon.c
 * [from r1.9 by delta oz-24309-TPCC-add-oracle8.1-code, r1.5]
 *
 * Revision 1.9 1999/01/12 20:52:59 wenjian
 * Define MAPOBJNAMEFORMAT so that the server processes and dll can communicate
 * via the shared file mappings.
 * [from r1.8 by delta wenjian-23856-TPCC-integrate-with-NT-performance-monitor, r1.1]
 *
 * Revision 1.8 1998/12/14 20:27:57 wenjian
 * Made corresponding changes due to data structure change of tran_info_t.
 *
 * - change server_tran_t
 * [from r1.7 by delta wenjian-23788-TPCC-use-single-stats-var-for-each-client-and-server, r1.3]
 *
 * Revision 1.7 1998/12/11 16:14:20 wenjian
 * Add code for checking statistic data in a single variable and collecting
 * statistic data based on iStatsFrequency.
 *
 * - Add server_tran_t and server_info_t
 * [from r1.6 by delta wenjian-23788-TPCC-use-single-stats-var-for-each-client-and-server, r1.1]
 *
 * Revision 1.6 1998/11/09 16:59:48 wenjian
 * In this revision, most of the changes are related to the directory of header
 * files after directory reorganization. Other changes include adding or removing
 * files to put them in the right directories. Makefiles are written for NT
 * platform so that nmake is working on NT now. Need a top level Makefile for all
 * the directories.
 * [from r1.5 by delta wenjian-23677-TPCC-reorganize-directory-structure, r1.2]
 *
 * Revision 1.5 1998/11/09 14:48:25 wenjian
 * In an effort to make a new directory structure for TPCC, this delta
 * creates two directories: tpcc/client and tpcc/server. All the files
 * for this revision are copied from tpcc/sp-tpcc without any change.
 * Further change may be needed for some files due to the change of
 * the directory structure.
 * [added by delta wenjian-23677-TPCC-reorganize-directory-structure, r1.1]
 *
 * Revision 1.9 1998/10/22 15:33:05 wenjian
 * Make changes to Encina server code to connect with SQL server and add
 * callsql.c and sql directory.
 *
 * Add delivery_sql_t to deal with SYSTEMTIME struct used in SQL
 * [from r1.7 by delta wenjian-23529-TPCC-integrate-with-SQL-server, r1.1]
 *
 * Revision 1.7 1998/01/23 15:08:50 oz
 * - Updated the SP TPCC directory to the latest files used
 * during the SP tpcc audit.
 * [from r1.6 by delta oz-20774-TPCC-update-to-latest-SP-version-11-27, r1.1]
 *

 * $Date: 1999/05/28 19:44:17 $
 * $Log: serverEncina.c,v $
 *
 * $TALog: serverMon.c,v $
 * Revision 1.23 1999/05/28 19:44:17 wenjian
 * Add create_null_connection and clean_null_connection so that
 * we can run with NULL DB.
 * [from r1.22 by delta wenjian-24433-TPCC-clean-up-and-update,r1.4]
 *
 * Revision 1.22 1999/05/28 14:30:22 wenjian
 * - Fix a bug for calling get_thread_data()
 * [from r1.21 by delta wenjian-24433-TPCC-clean-up-and-update,r1.3]
 *
 * Revision 1.21 1999/05/26 16:29:59 wenjian
 * Sync with Austin code, and sync code for OracleDB and SQL server.
 *
 * - Fix some minor bugs
 * [from r1.20 by delta wenjian-24433-TPCC-clean-up-and-update,r1.2]
 *
 * Revision 1.20 1999/05/06 21:28:31 oz
 * - Removed all the .. from the includes
 * - Added -L. to the makefiles instead
 * - Moved all the thread related code and connection
 * selection to serverMon.c
 *
 * - Added connection and thread related code.
 * - pre_DB and post_DB always get called.
 * - get_db_ready has only 2 parameters
 * - added tran_info_t, total_tran_count_t, and thread_info_t
 * - Added clean_thread_data and get_thread_data
 * - Preallocate all the connections if necessary after
 * initializing the DB.
 * - A connection is created by calling the DB specific
 * create_connection() which returns a void* handle to
 * be passed to all the transactions.
 * [from r1.18 by delta oz-24309-TPCC-add-oracle8.1-code, r1.5]
 *
 * Revision 1.18 1999/04/20 15:11:28 oz
 * [merge of changes from 1.13 to 1.17 into 1.12]
 *
 * Revision 1.17 1999/04/19 20:14:49 oz
 * - Moved all the simulated code to server.c
 * - Created nulldb.c for compilation with no DB
 * [from r1.13 by delta oz-24331-TPCC-move-sim-code-to-common-file,r1.1]
 *
 * Revision 1.12 1999/01/12 20:53:00 wenjian
 * - Call initialization function perfSrvDataInit to create the shared file
 * mapping for this server process
 * - Change server_info to pServerInfo
 * [from r1.11 by delta wenjian-23856-TPCC-integrate-with-NT-performance-monitor,r1.1]
 *
 * Revision 1.11 1998/12/14 20:27:58 wenjian
 * Made corresponding changes due to data structure change of tran_info_t.
 *
 * - Made changes for server_tran_t
 * - Add tran_type to FUNCTION_BEGIN, FUNCTION_END, pre_DB, and post_DB
 * [from r1.10 by delta wenjian-23788-TPCC-use-single-stats-var-for-each-client-and-server, r1.3]
 *
 * Revision 1.10 1998/12/11 16:14:20 wenjian
 * Add code for checking statistic data in a single variable and collecting
 * statistic data based on iStatsFrequency.
 *
 * - Change pre_oracle to pre_DB, post_oracle to post_DB
 * - Add code to collect server RT in a global var
 * [from r1.9 by delta wenjian-23788-TPCC-use-single-stats-var-for-each-client-and-server, r1.1]
 *
 * Revision 1.9 1998/12/08 18:55:22 wenjian
 * - Remove "statsFrequency=" command line argument.
 * - Check rpc header for stats
 * [from r1.8 by delta wenjian-23785-TPCC-pass-statsFrequency-from-client-to-server,r1.1]
 *
 * Revision 1.8 1998/12/07 20:04:16 wenjian
 * Remove interfaces for explicit bindings
 * [from r1.7 by delta wenjian-23742-TPCC-update-with-Ralieghe-code,r1.2]
 *
 * Revision 1.7 1998/11/24 21:46:03 wenjian
 * - Remove COLLECT_TIMESTAMPS; use command line argument iStatsFrequency
 * instead
 * - Take care of MULTIPLE_INTERFACE and SINGLE_INTERFACE
 * [from r1.6 by delta wenjian-23742-TPCC-update-with-Ralieghe-code,r1.1]

Need a top level Makefile for all the directories. * [from r1.5 by delta wenjian-23677-TPCC-reorganize-directory-structure,r1.2] * Revision 1.5 1998/11/09 14:48:25 wenjian * In an effort to make a new directory structure for TPCC, this delta creates two directories: tpcc/client and tpcc/server. All the files for this revision are copied from tpcc/sp-tpcc without any change. * Further change may be needed for some files due to the change of the directory structure. * [added by delta wenjian-23677-TPCC-reorganize-directory-structure,r1.1] * Revision 1.36 1998/11/06 16:10:56 wenjian * - Increase the range for the number of threads communicating to the DB. * - Print warning if the number of threads is out of the range. * [from r1.35 by delta wenjian-23646-TPCC-clean-up-source-code,r1.1] * Revision 1.35 1998/10/22 21:30:47 wenjian * [merge of changes from 1.20 to 1.29 into 1.34] * Revision 1.29 1998/10/08 14:18:02 dongfeng * Add codes for doing web-based tpcc. * [from r1.20 by delta dongfeng-23067-TPCC-add-web-based-tpcc-client,r1.1] * Revision 1.34 1998/10/22 19:43:38 wenjian * [merge of changes from 1.28 to 1.32 into 1.30] * Revision 1.32 1998/10/22 16:25:13 wenjian * Multi-threaded version. * - Open server_logtrans for err_printf() and deliLog for delivery server * - Call get_time_init() for get_local_time * - Changes for multi-threaded version * [from r1.31 by delta wenjian-23529-TPCC-integrate-with-SQL-server,r1.2] * Revision 1.31 1998/10/22 15:33:05 wenjian * Make changes to Encina server code to connect with SQL server and add callsql.c and sql directory. * - Add SYSTEMTIME *queue_time to deferred_dvry_t for NT * - Allocate space and set value for queue_time * - Pass delivery_sql_t instead of delivery_data_t for SQLdel on NT * [from r1.28 by delta wenjian-23529-TPCC-integrate-with-SQL-server,r1.1] * Revision 1.30 1998/10/08 18:03:03 gerstl * Changes to allow configurations where some servers only service specific transaction types. Split transaction interfaces by type. * Transaction interface support is based upon a bitmap passed to the server. * [from r1.28 by delta gerstl-23515-TPCC-allow-separate-online-transaction-interfaces,r1.1] * Revision 1.28 1998/10/07 15:49:49 gerstl * [merge of changes from 1.22 to 1.26 into 1.27] * Revision 1.26 1998/09/03 20:22:02 wenjian * Sync with Austin code: mostly use servrMon.c in Austin. * [from r1.25 by delta wenjian-23183-TPCC-sync-AIX-code-with-Austin,r1.4] * Revision 1.25 1998/09/03 16:07:12 wenjian * Remove UNCOND_EVENT which is not in austin code. * [from r1.24 by delta wenjian-23183-TPCC-sync-AIX-code-with-Austin,r1.3] * Revision 1.24 1998/09/02 15:43:30 wenjian * Define num_worker_threads. * [from r1.23 by delta wenjian-23183-TPCC-sync-AIX-code-with-Austin,r1.2] * Revision 1.23 1998/08/28 18:30:02 wenjian * This delta sync the TPCC code with Austin. * - Take care of 1 thread per PA * - Update with Austin code * - Remove the old code starting from #ifdef THIS_WAS_THE_OLD_CODE * - Remove impTPCCdvryInfo() * [from r1.22 by delta wenjian-23183-TPCC-sync-AIX-code-with-Austin,r1.1] * Revision 1.27 1998/09/26 10:27:33 oz * Changes for NT. * [from r1.22 by delta oz-23339-TPCC-update-for-NT, r1.1] * Revision 1.22 1998/08/18 14:38:43 wenjian * Minor change * [from r1.20 by delta wenjian-21750-TPCC-changes-for-porting-on-NT,r1.4] * Revision 1.20 1998/02/17 22:07:06 wenjian * Minor changes for NT * [from r1.19 by delta wenjian-21750-TPCC-changes-for-porting-on-NT,r1.1] * Revision 1.19 1998/01/30 15:12:28 oz * - Remove the explicit binding functions from thetidl files and from serverMon.c * [from r1.18 by delta oz-21697-TPCC-remove-explicit-binding-code,r1.2] * Revision 1.18 1998/01/24 14:17:06 oz 	<ul style="list-style-type: none"> * - User server name to identify server and name delivery file * - Use env variable HOME instead of /home/encina if HOME is set * - Removed the machine list * The server ID is computed from the first number found in the host name * [from r1.17 by delta oz-21687-TPCC-use-server-name-to-identify-process,r1.1] * Revision 1.17 1998/01/23 21:59:00 oz * - In order to simplify the Encina TPCC code: Merge the four online transactions into 1 interface * - Moved all the scripts to a scripts subdirectory * - Removed unused files * [from r1.16 by delta oz-21671-TPCC-merge-online-transaction-interfaces,r1.1] * Revision 1.16 1998/01/23 15:08:53 oz * - Updated the SP TPCC directory to the latest files used during the SP tpcc audit. * [from r1.15 by delta oz-20774-TPCC-update-to-latest-SP-version-11-27, r1.1] * serverMon.c * Code that is monitor specific. * #include <sys/types.h> * #ifndef WIN32 * #include <unistd.h> * #else * #include <process.h> * #include <winsock.h> * #endif * #include <stdio.h> * #include <stdarg.h> * #include <time.h> * #include <tmx/tmxa.h> * #include <tc/tc.h> * #include <tpm/mon/mon_server.h> * #if defined (solaris) * #include <dce/pthread.h> * #else /* solaris */ * #include <pthread.h> * #endif /* solaris */ * #include <utils/trace.h> * #include "common/databuf.h" * #include "common/utilities.h" * #include "serverDebug.h" * #include "common/delivery.h" * #ifdef MULTIPLE_INTERFACE * #include "common/neworder.h" * #include "common/payment.h" * #include "common/stocklevel.h" * #include "common/orderstatus.h" * #else * #include "common/tpcc_trans.h" * #endif * #include "server.h" * # define FUNCTION_BEGIN(name, dataP, tran_type, infoP) \pre_DB(name, &(dataP)->header, tran_type, infoP); * # define FUNCTION_END(name, dataP, tran_type, infoP) \post_DB(name, &(dataP)->header, tran_type, infoP); \ * #ifdef WIN32 * #define CASECMP(x,y) _stricmp(x,y) == 0 * #define getpid _getpid * extern void TPCexit(); * #else * #define CASECMP(x,y) strcmp(x,y) == 0 * extern void TPCexit(); * #endif * extern void *create_connection(); * extern void clean_connection(void*); * extern int get_db_ready(char *, int); * inModule("serverMon"); * static void start_deferred_delivery_threads(); * static void queue_delivery(delivery_data_t*dataP); * static void *create_null_connection(); * static void clean_null_connection(void*ptr); * extern int server_null_test; * extern void err_printf(char *format, ...); * extern int get_db_ready(char *, int); * extern void logprintf(char *format, ...); * extern server_info_t *perSrvDataInit(char *, int); * extern void *start_bg_thread(); * static void get_mon_server_env(); * server_type_t server_type = mon_server;

B.3 AIX Parameters

IBM eServer pSeries 680

OS PARAMETERS

keylock	normal	State of system	keylock at boot time	False
maxbuf	20	Maximum number of pages in block I/O BUFFER CACHE		
True				
maxmbuf	0	Maximum Kbytes of real memory allowed for MBUFS		
True				
maxuproc	10000	Maximum number of PROCESSES allowed per user		
True				
autorestart	false	Automatically REBOOT system after a crash	True	
ostat	false	Continuously maintain DISK I/O history	True	
realmem	100663296	Amount of usable physical memory in Kbytes	False	
conslogin	enable	System Console Login	False	
fwversion	IBM,H9900199	Firmware version and revision levels	False	
maxpout	0	HIGH water mark for pending write I/Os per file	True	
minpout	0	LOW water mark for pending write I/Os per file	True	
fullcore	false	Enable full CORE dump	True	
pre430core	false	Use pre-430 style CORE dump	True	
rtasversion	1	Open Firmware RTAS version	False	
modelname	IBM,7017-S85	False		
systemid	IBM,vpd property exists but SE field does not exist	Hardware system identifier		
False				
boottype	disk	N/A	False	
SW_dist_intr	false	Enable SW distribution of interrupts	True	
cpuguard	disable	CPU Guard	True
