First Edition

First Edition December 13, 1999

Fujitsu Siemens believes that the information in this document is accurate as of the publication date. The information in this document is subject to change without notice. We assume no responsibility for any errors that may appear in this document. The pricing information in this document is believed to accurately reflect the current prices as of the publication date. However, we provide no warranty of the pricing information in this document.

Benchmark results are highly dependent upon workload, specific application requirements, system design and implementation. Relative system performance will vary as a result of these and other factors. Therefore, TPC Benchmark™ C should not be used as a substitute for a specific customer application benchmark when critical capacity planning and/or product evaluation decisions are contemlated.

All performance data contained in this report were obtained in a rigorously controlled environment. Results obtained in other operating environments may vary significantly. We do not warrant or represent that a user can or will achieve similar performance expressed in transactions per minute (tpmC) or normalized price/performance (€/tpmC). No warranty of system performance or price/performance is expressed or implied in this report.

Preface

The Transaction Processing Performance Council (TPC), of which Fujitsu Siemens Computers GmbH is a member, is an organization of computer companies, dedicated to the development of objective, industry-wide performance metrics in the area of transaction processing. Fujitsu Siemens Computers GmbH is involved in this effort, participating on the council and utilizing TPC benchmarks in performance evaluation.

The TPC Benchmark™ C Standard Specification was developed by the Transaction Processing Performance Council. This benchmark exercises the system components necessary to perform tasks associated with that class of on-line transaction processing (OLTP) environments emphasizing a mixture of read-only and update intensive transactions. This is a complex OLTP application environment exercising a breadth of system components associated by such environments characterized by:

- The simultaneous execution of multiple transaction types that span a breadth of complexity
- On-line and deferred transaction execution modes
- Multiple on-line terminal sessions
- Moderate system and application execution time
- Significant disk input/output
- Transaction integrity (ACID properties)
- Non-uniform distribution of data access through primary and secondary keys
- Databases consisting of many tables with a wide variety of sizes, attributes, and relationships
- Contention on data access and update

This benchmark defines four on-line transactions and one deferred transaction, intended to emulate functions that are common to many OLTP applications. However, this benchmark does not reflect the entire range of OLTP requirements. The extent to which a customer can achieve the results reported by a vendor is highly dependent on how closely TPC-C approximates the customer application. The relative performance of systems derived from this benchmark does not necessarily hold for other workloads or environments. Extrapolations to any other environment are not recommended.

Benchmark results are highly dependent upon workload, specific application requirements, system design and implementation. Relative system performance will vary as a result of these and other factors. Therefore, TPC-C should not be used as a substitute for a specific customer application benchmarking when critical capacity planning and/or product evaluation decisions are contemplated.

The performance metric reported by TPC-C is a "business throughput" measuring the number of orders processed per minute. Multiple transactions are used to simulate the business activity of processing an order , and each transaction is subjected to a response time constraint. The performance metric for this benchmark is expressed in transactions-per-minute-C (tpmC). To be compliant with the TPC-C standard, all references to tpmC results must include the tpmC rate, the associated price-per-tpmC, and the availability date of the priced configuration.

Summary

This report documents the TPC Benchmark™ C results achieved by the Fujitsu Siemens Computers GmbH using Microsoft SQL Server 7.0 Enterprise Edition.

The TPC Benchmark™ C tests were run on a Primergy K800 system using the Windows NT 4.0 Enterprise Edition operating system.

The results, summarized below, show the number of TPC Benchmark™ C transactions per minute (tpmC) and the price per tpmC (€/tpmC).

Prices used in TPC bechmarks reflect the actual prices a customer would pay for a one-time purchase of the stated components. Individually negotiated discounts are not permitted. Special prices based on assumptions about past or future purchases are not permitted. All discounts reflect standard pricing policies for the listed components. For complete details, see the pricing section of the TPC benchmark pricing specifications. If you find that the stated prices are not available according to these terms, please inform the TPC at pricing@tpc.org. Thank you.

Five-Year Cost of Ownership: €682,917
tpmC Rating: 40,696.25
€ / tpmC: 16.78

Introduction

This is the Full Disclosure Report for the TPC Benchmark™ C running on the Fujitsu Siemens Computers system Primergy K800. It meets the requirements of the TPC Benchmark™ C Standard Revision 3..

System Overview

This report documents the compliance of the Fujitsu Siemens Computers GmbH TPC Benchmark™ C tests using Microsoft SQL Server 7.0 Enterprise Edition Relational Database Management System.

The TPC Benchmark™ C tests were carried out on a Primergy K800. The Primergy K800 is a powerful Windows NT Enterprise Server with a motherboard based on the Intel Profusion chipset holds up to 8 Intel Pentium® III Xeon 550 MHz processors with 2 MB L2 cache. The system was equipped with 4 GB of ECC SDRAM memory. 9 of the 10 hot-pluggable 64-bit-PCI-Slots (4 with 66 MHz and 6 with 33 MHz) were used for AMI MegaRAID Enterprise 1500-H RAID controllers, 1 was used for an Intel Pro100+ Ethernet adapter.
The client machines were 5 Primergy 170, each with 1 Intel Pentium® III 550 MHz, 256 MB ECC SDRAM memory and 4 Adaptec ANA 62022 dual-port ethernet adapters.

The server operating system was Windows NT 4.0 Enterprise Edition SP5, the client operating system Windows 2000 Server.

Full Disclosure

From Clause 8.1 of the TPC Benchmark™ C Standard Specification:

> The intent of this disclosure is for a customer to be able to replicate the results of this benchmark given the appropriate documentation and products.

Fujitsu Siemens Computers believes that this full disclosure report meets the stated intention. Fujitsu Siemens Computers has strived to maintain the integrity of the Specification by adhering not only to the letter of the Specification, but also to its spirit.

Report Format

*The format of this document follows Clause 8 of the TPC Benchmark™ C specification (*TPC Benchmark™ C Standard Specification*, Revision 3., Transaction Processing Performance Council) which describes the full disclosure report requirements for the test.*

Each section of this report begins with the specification requirement printed in *italic type*. It is followed by plain type text that explains how the test complies with the requirement. Sections which require extensive listings reference appropriate appendices.

Report organization**:**

- General Items
- Clause 1 Related Items - Logical Database Design
- Clause 2 Related Items - Transaction and Terminal Profiles
- Clause 3 Related Items - Transaction and System Properties
- Clause 4 Related Items - Scaling and Database Population
- Clause 5 Related Items - Performance Metrics and Response Time
- Clause 6 Related Items - SUT, Driver, and Communication Definition
- Clause 7 Related Items - Pricing
- Clause 8 Related Items - Audit
- Appendix A - Application Source Code
- Appendix B - Database Details
- Appendix C - Tunable Parameters and Options
- Appendix D - Pricing Details
- Appendix E - Price Quotations
- Appendix F - Attestation Letter

33106 Paderborn
Germany

1. General Items

1.1 Application Code

The application program (as defined in Clause 2.1.7) must be disclosed. This includes, but is not limited to, the code implementing the five transactions and the terminal input and output functions. [Clause 8.1.1.4]

The source code of the application program is provided in Appendix A - Application Source Code.

1.2 Benchmark Sponsor

A statement identifying the benchmark sponsor(s) and other participating companies must be provided. [Clause 8.1.1.5]

This benchmark was sponsored and executed by Fujitsu Siemens Computers GmbH.
The benchmark was developed and engineered by Fujitsu Siemens Computers GmbH and Microsoft Corporation. Testing took place at Fujitsu Siemens Computers NT-benchmark laboratories in Paderborn, Germany.

1.3 Parameter Settings

Settings must be provided for all customer-tunable parameters and options which have been changed from the defaults found in actual products, including but not limited to:

- *Database tuning options.*
- *Recovery/commit options.*
- *Consistency/locking options.*
- *Operating system and application configuration parameters.*

[Clause 8.1.1.6]

The significant parameters and system configuration files are provided in Appendix C - Tunable Parameters and Options.

1.4 Configuration Diagrams

Diagrams of both measured and priced configurations must be provided, accompanied by a description of the differences. This includes, but is not limited to:

- *Number and type of processors.*
- *Size of allocated memory, and any specific mapping/partitioning of memory unique to the test.*
- *Number and type of disk units (and controllers, if applicable).*
- *Number of channels or bus connections to disk units, including their protocol type.*
- *Number of LAN (e.g., Ethernet) connections, including routers, workstations, terminals, etc., that were physically used in the test or are incorporated into the pricing structure (see Clause 8.1.8).*
- *Type and the run-time execution location of software components (e.g., DBMS, client processes, transaction monitors, software drivers, etc.).*

[Clause 8.1.1.7]

SUT Configuration

The Primergy K800 server system included:

8	Intel Pentium® III Xeon 550 MHz with 2 MB Second Level Cache
4	GB memory
9	SCSI controllers
385	disks 9 GB
8	disks 36 GB
1	LAN

Client Configuration

The Primergy 170 client systems included:

1	Intel Pentium® III 550 MHz with 512 KB Second Level Cache
256	MB memory
1	SCSI controller
1	disk 4 GB
4	dual port LAN

The benchmarked and priced system configurations are shown in Figure 1 and Figure 2 in accordance with Clause 8.1.1.7.

FIGURE 1: BENCHMARK SYSTEM CONFIGURATION PRIMERGY K800

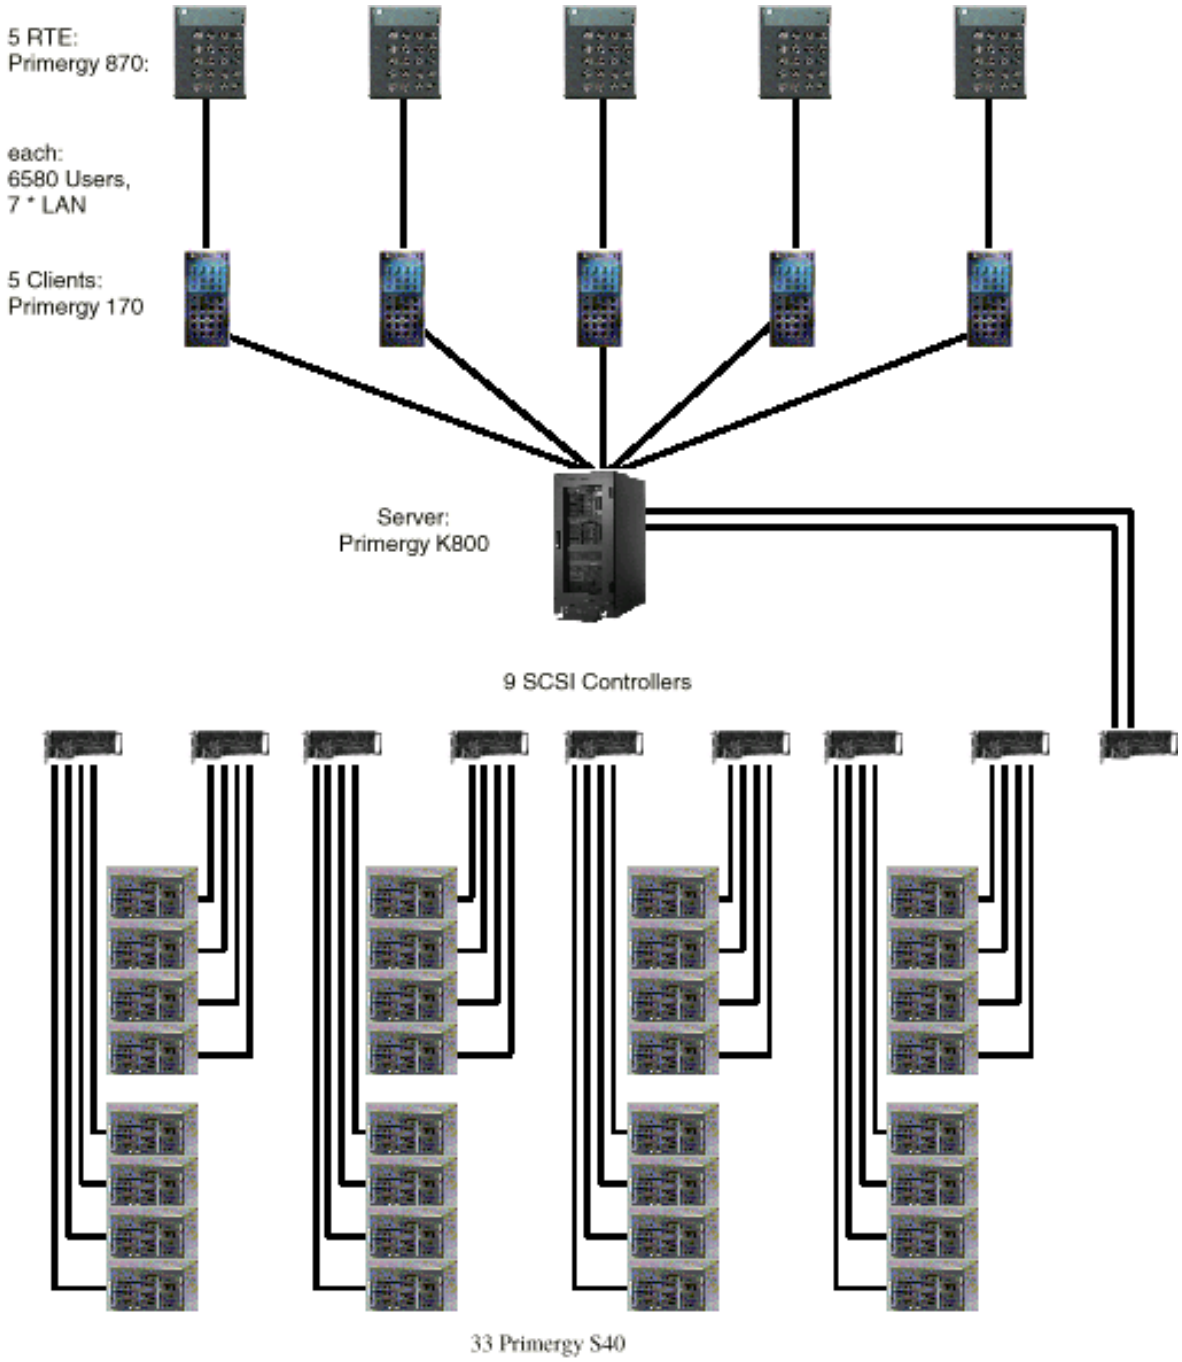

FIGURE 2: PRICED SYSTEM CONFIGURATION PRIMERGY K800

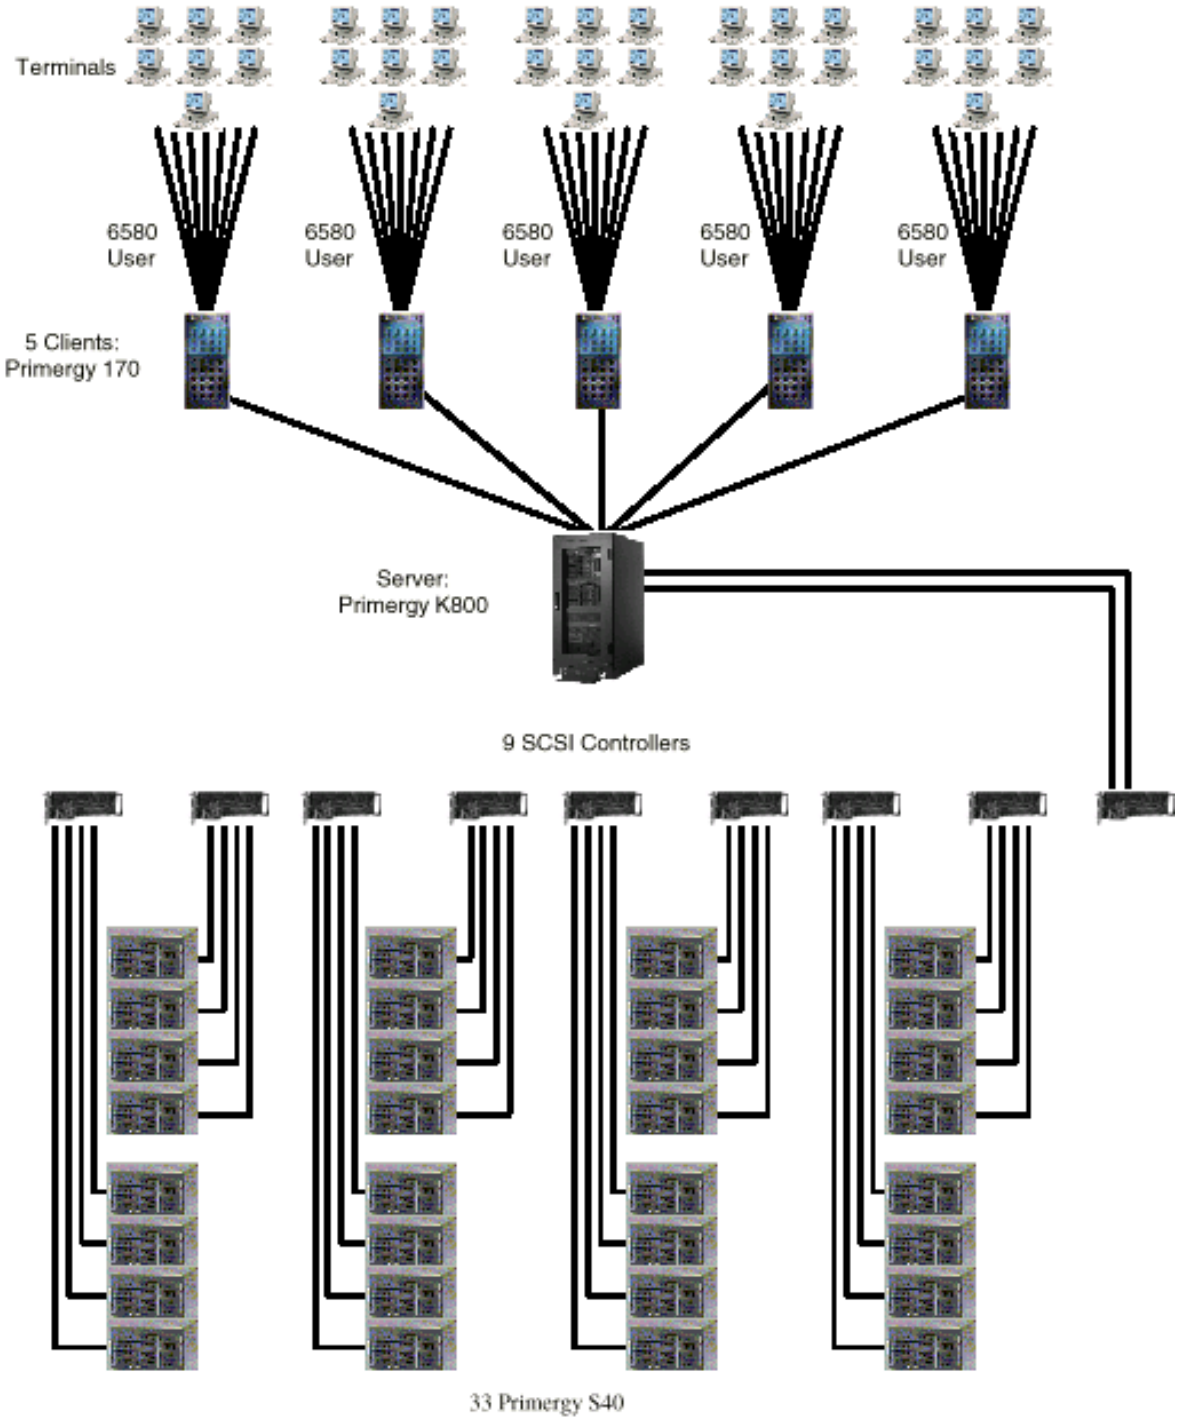

2. Clause 1 Related Items - Logical Database Design

2.1 Table Definitions

Listings must be provided for all table definition statements and all other statements used to set-up the database. [Clause 8.1.2.1]

The programs that defined, created, and populated the Microsoft SQL Server 7.0 Enterprise Edition database for this TPC benchmark™ C are listed in Appendix B - Database Details.

2.2 Physical Organization of Database

The physical organization of tables and indices, within the database, must be disclosed. [Clause 8.1.2.2]

FIGURE 3: PHYSICAL ORGANIZATION OF THE DATABASE

Disk #	Controller	Disktype	RAID Configuration	Drive Letter	Size MB	Filegroup or Filesystem
0,1	Symbios (onboard)	9 GB	-	WINNT40EE C: SQL D:	1000 8000	NTFS NTFS
2	MegaRAID Enterprise 1500-H #1	48 x 9 GB	RAID0	E: N: X:	24000 14000 200000	cs1 misc1 BACKUP 1
3	MegaRAID Enterprise 1500-H #2	48 x 9 GB	RAID0	F: O:	24000 14000	cs2 misc2
4	MegaRAID Enterprise 1500-H #3	48 x 9 GB	RAID0	G: P: Y:	24000 14000 200000	cs3 misc3 BACKUP 2
5	MegaRAID Enterprise 1500-H #4	48 x 9 GB	RAID0	H: Q:	24000 14000	cs4 misc4
6	MegaRAID Enterprise 1500-H #5	8 x 36 GB	RAID1	L:	50000	log
7	MegaRAID Enterprise 1500-H #6	48 x 9 GB	RAID0	I: R:	24000 14000	cs5 misc5
8	MegaRAID Enterprise 1500-H #7	48 x 9 GB	RAID0	J: S:	24000 14000	cs6 misc6
9	MegaRAID Enterprise 1500-H #8	48 x 9 GB	RAID0	K: T:	24000 14000	cs7 misc7
10	MegaRAID Enterprise 1500-H #9	48 x 9 GB	RAID0	M: U:	24000 14000	cs8 misc8

All controllers were configurated with write cache disabled. Write cache was enabled on the log drives and disabled on the data drives.
Space was allocated to Microsoft SQL Server 7.0 Enterprise Edition on SUT disks according to the data in section 5.2. The size of the datafile on each disk drive was calculated to provide even distribution on load across the disk drives. The NT Disk Administrator was used to create raw devices for data/log and NTFS partitions for dump devices. For further information see Appendix B (Disk Usage) and Figure 4 in 5.2 (Distribution of Tables and Log). No attempt was made to alter the default physical organization of the database tables and indices chosen by Microsoft SQL Server 7.0 Enterprise Edition.

2.3 Insert and Delete Operations

It must be ascertained that insert and/or delete operations to any of the tables can occur concurrently with the TPC-C transaction mix. Furthermore, any restriction in the SUT database implementation that precludes inserts beyond the limits defined in Clause 1.4.11 must be disclosed. This includes the maximum number of rows that can be inserted and the maximum key value for these new rows. [Clause 8.1.2.3]

There were no restrictions on insert and delete operations to any tables.

2.4 Database Partitioning

While there are a few restrictions placed upon horizontal or vertical partitioning of tables and rows in the TPC benchmark™ C (see Clause 1.6), any such partitioning must be disclosed. [Clause 8.1.2.4]

There was no partitioning used in this implementation.

2.5 Replication of Tables

Replication of tables, if used, must be disclosed (see Clause 1.4.6). [Clause 8.1.2.5]

Replication of tables was not used in this implementation.

2.6 Additional and/or Duplicated Attributes

Additional and/or duplicated attributes in any table must be disclosed along with a statement on the impact on performance (see Clause 1.4.7). [Clause 8.1.2.6]

No additional and/or duplicated attributes were used.

3. Clause 2 Related Items - Transaction and Terminal Profiles

3.1 Random Number Generator

The method of verification for the random number generation must be described. [Clause 8.1.3.1]

The random number generation was done in Microsoft BenchCraft, which was audited independently.

3.2 Input/Output Screen Layout

The actual layouts of the terminal input/output screens must be disclosed. [Clause 8.1.3.2]

The screen layout corresponded exactly to those of the TPC-C Standard Specification (specified in Clause 2.4.3, 2.5.3, 2.6.3, 2.7.3, and 2.8.3).

3.3 Configured Terminal Features

The method used to verify that the emulated terminals provide all the features described in Clause 2.2.2.4 must be explained. Although not specifically priced, the type and model of the terminals used for the demonstration in 8.1.3.3 must be disclosed and commercially available (including supporting software and maintenance). [Clause 8.1.3.3]

All of the requirements in clause 2.2.2.4. are supported. This was verified by manually exercising each specification on a Primergy 870-40.

3.4 Presentation Managers or Intelligent Terminals

Any usage of presentation managers or intelligent terminals must be explained. [Clause 8.1.3.4]

Application code running on the client machines implemented the TPC-C user interface. No presentation manager software or intelligent terminal features were used. The source code for the forms application is listed in Appendix A - Application Source Code.

3.5 Transaction Statistics

The numerical quantities which are required are listed in the following table. [Clause 8.1.3.5 to 8.1.3.11]

	Statistics	Percentage
New-Order	Home order-lines	98.99%
	Remote order-lines	1.01%
	Rolled back transactions	1.01%
	Average items per order	10.00
Payment	Home transactions	84.95%
	Remote transactions	15.05%
	Non-primary key access	59.95%
Order-Status	Non-primary key access	60.24
Delivery	Skipped transactions	0
Transaction Mix	New-Order	44.79 %
	Payment	43.09 %
	Order-Status	4.04 %
	Delivery	4.06 %
	Stock-Level	4.02 %

3.6 Queueing Mechanism

The queuing mechanism used to defer the execution of the Delivery transaction must be disclosed. [Clause 8.1.12]

Deferred deliveries are queued by making an entry in an array within the client application process (tpcc.dll). The queued delivery transactions are processed and logged asynchronously by background threads within the application.
The source code is listed in Appendix A - Application Source Code.

4. Clause 3 Related Items - Transaction and System Properties

ACID Tests

The results of the ACID tests must disclosed along with a description of how the ACID requirements were met. This includes disclosing which case was followed for the execution of Isolation Test 7. [Clause 8.1.4.1]

All ACID tests were performed successfully. The following sections describe the requirements of each of the tests as described in Clause 3 and the approach used to satisfy them.

All ACID tests were performed on the Primergy K800 system using the fully scaled database, except for the test of durable media failure.
The durability test was performed on a database scaled to 15 warehouses. This test would also pass on a fully scaled database.

4.1 Atomicity

The system under test must guarantee that database transactions are atomic; the system will either perform all individual operations on the data, or will assure that no partially-completed operations leave any effects on the data. [Clause 3.2.1]

Commit Transaction

Perform the Payment transaction for a randomly selected warehouse, district, and customer (by customer number as specified in Clause 2.5.1.2) and verify that the records in the CUSTOMER, DISTRICT, and WAREHOUSE tables have been changed appropriately. [Clause 3.2.2.1]

The following steps demonstrated atomicity for completed (COMMIT) transactions:

- A row was randomly selected from the warehouse, district and customer table.
- the current balance was noted.
- A payment transaction was executed with the above identifiers and a known amount.
- The transaction was committed.
- It was verified, that the rows contain the correct updated balances.

Rollback Transaction

Perform the Payment transaction for a randomly selected warehouse, district, and customer (by customer number as specified in Clause 2.5.1.2) and substitute a ROLLBACK of the transaction for the COMMIT of the transaction. Verify that the records in the CUSTOMER, DISTRICT, and WAREHOUSE tables have NOT been changed. [Clause 3.2.2.2]

The following steps demonstrated atomicity for aborted (ROLLBACK) transactions:

- A row was randomly selected from the warehouse, district and customer table.
- the current balance was noted.
- A payment transaction was executed with the above identifiers and a known amount.
- The transaction was rolled back.
- It was verified, that the rows contain the original balances.

4.2 Consistency

Consistency is the property of the application that requires any execution of a database transaction to take the database from one consistent state to another, assuming that the database is initially in a consistent state. [Clause 3.3.1]

Consistency conditions 1 - 4 were tested by issuing queries to the database. The results of the queries verified that the database was consistent for all these tests. The tests were performed before and after the performance run on the same database that was used for the benchmark.

4.3 Isolation

Operations of concurrent transactions must yield results which are indistinguishable from the results which would be obtained by forcing each transaction to be serially executed to completion in some order.

We ran all of the seven isolation tests as described in clause 3.4.2.1 to 3.4.2.7 and additionally the two phantom protection tests. The tests were executed using shell scripts to issue queries to the database. The results of the queries verified that the required isolation had been met.

4.4 Durability

The tested system must guarantee durability: the ability to preserve the effects of committed transactions and insure database consistency after recovery from any one of the failures listed in Clause 3.5.3. [Clause 3.5]

List of single failures:

1 *Permanent irrecoverable failure of any single durable medium containing TPC-C database tables or recovery log data.*
2 *Instantaneous interruption (system crash / system hang) in processing which requires system reboot to recover.*
3 *Failure of all or part of memory (loss of contents).*

[Clause 3.5.3]

The intent of these tests is to demonstrate that all transactions whose output messages have been received at the terminal or RTE have in fact been committed in spite of any single failure from the list in Clause 3.5.3 and that all consistency conditions are still met after the database is recovered.

It is required that the system crash test(s) and the loss of memory test(s) described in Clause 3.5.3.2 and 3.5.3.3 be performed under full terminal load and a fully scaled database. The durable media failure test(s) described in Clause 3.5.3.1 may be performed on a subset of the SUT configuration and database. For the SUT subset, all multiple hardware components, such as processors and disk / controllers in the full SUT configuration, must be represented by the greater of 10% of the configuration or two of each of the multiple hardware components. The database must be scaled to at least 10% of the fully scaled database, with a minimum of two warehouses. ... Furthermore, the standard driving mechanism must be used in this test. The test sponsor must state that to the best of their knowledge, a fully scaled test would also pass all durability tests. [Clause 3.5.4]

The failure of all or part of memory test and the system crash test were combined with the loss of log disk and performed under full load and by using a fully scaled database.

The full hardware configuration of the SUT (in accordance with Clause 3.5.4) and the same test procedure was used during all durability tests, except the test for loss of data.

- The current count of the total number of orders was determined by summing up the D_NEXT_O_ID fields of all rows in the DISTRICT table before the test.
- 6 min after starting the measurement we pulled off one of the log disks. As we use hardware-mirrored diskpairs with the SCSI-controller, execution continued.
- After additional 6 min we powered of the server to emulate the loss of memory. After server system reboot, SQL-Server starts with recovering the database tpcc. After completion, we computed the sum of D_NEXT_O_ID from district. Client and RTE systems were interrupted and evaluation started on the RTE. The difference of all D_NEXT_O_ID between RTE an server was in the permitted scope.

The durable media failure test for loss of data disk was performed with 48 of the 384 data disks and a database scaled to 15 warehouses under the load of 150 users. We used one RTE and one client system. To the best of the test sponsor's

knowledge, a fully loaded and fully scaled database would also pass this durability test.

- The database was backed up.
- The current count of the total number of orders was determined by summing up the D_NEXT_O_ID fields of all rows in the DISTRICT table before the test.
- 5 min after starting the measurement, we pulled of one of the data disks.
- SQL-Server recognized the loss of a device. We dumped the transaction log and removed the database with dropdevice. Then we shut down SQL-Server and the system.
- We replaced the disk and made it online.
- We restarted SQL-Server, no tpcc database and none of its devices were present. We recreated the database, loaded dump and load transaction log
- After completion, we computed the sum of D_NEXT_O_ID from district.
- Client and RTE systems were interrupted and evaluation started on the RTE. The difference of all D_NEXT_O_ID between RTE an server was in the permitted scope.

5. Clause 4 Related Items - Scaling and Database Population

5.1 Initial Cardinality of Tables

The cardinality (e.g., the number of rows) of each table, as it existed at the start of the benchmark run (see Clause 4.2), must be disclosed. If the database was over-scaled and inactive rows of the WAREHOUSE table were deleted (see Clause 4.2.2), the cardinality of the WAREHOUSE table as initially configured and the number of rows deleted must be disclosed. [Clause 8.1.5.1]

The database for the Primergy K800 system was scaled for 3290 warehouses. In accordance with Clause 4.2, the following number of records were loaded in the specified tables:

Table	Number of Records
Warehouse	3290
District	32,900
Customer	98,700,000
History	98,700,000
Order	98,700,000
New-Order	29,610,000
Order-Line	986,992,980
Stock	329,000,000
Item	100,000
Deleted Warehouses	0

The following constant values were used during the database build and benchmark test for the NURand function:

Constant C	Value
C_LAST (build)	123
C_LAST (run)	233

5.2 Distribution of Tables and Log

The distribution of tables and logs across all media must be explicitly depicted for the tested and priced systems. [Clause 8.1.5.2]

FIGURE 4: LOGICAL ORGANIZATION OF THE DATABASE

	device	raw size	use
C:	MSSQL70_tpcc_root	10 MB	root
L:	MSSQL70_tpcc_log	50,000 MB	Log
E:	MSSQL70_cs1	23,500 MB	Stock,Customer

S:	MSSQL70_misc6	13,500 MB	Warehouse,District,Item,New Order,History,Order,Orderline
T:	MSSQL70_misc7	13,500 MB	Warehouse,District,Item,New Order,History,Order,Orderline
U:	MSSQL70_misc8	13,500 MB	Warehouse,District,Item,New Order,History,Order,Orderline

5.3 Database Model, Interface, and Access Language

A statement must be provided that describes:

1. The data model implemented by the DBMS used (e.g., relational, network, hierarchical)

2. The database interface (e.g., embedded, call level) and access language (e.g., SQL, DL/1, COBOL read/write) used to implement the TPC-C transactions. If more than one interface/access language is used to implement TPC-C, each interface / access language must be described and a list of which interface/access language is used with which transaction type must be disclosed.

[Clause 8.1.5.3]

Microsoft SQL Server 7.0 Enterprise Edition is a Relational DataBase Management System. The interface used was Microsoft SQL Server 7.0 Enterprise Edition stored procedures accessed with Remote Procedure Calls embedded in C code.

5.4 Database Partitions/Replications Mapping

The mapping of database partitions/replications must be explicitly described. [Clause 8.1.5.4]

There was no partitioning and/or replication used in this implementation.

5.5 180 day space Calculation

Details of the 180-day space computations along with proof that the database is configured to subtain 8 hours of growth for the dynamic tables (Order, Order-Line, and History) must be disclosed (see Clause 4.2.3). [Clause 8.1.5.5]

Calculations of space requirements in the priced configurations for the 180-day period are provided in Appendix D - Pricing Details.

6. Clause 5 Related Items - Performance Metrics and Response Time

6.1 Measured tpmC

Measured tpmC must be reported. [Clause 8.1.6.1]

During the 20 minutes measurement period on the Primergy K800 the throughput measured was 40,696.25 tpmC.

6.2 Response Times

Ninetieth percentile, maximum and average response times must be reported for all transaction types as well as for the Menu response time. [Clause 8.1.6.2]

Type	Average	Maximum	90 Percentile
New-Order	0.59	5.26	0.90
Payment	0.45	4.08	0.75
Order-Status	0.47	5.66	0.77
Interactive Delivery	0.13	1.15	0.18
Deferred Delivery	0.62	2.00	0.94
Stock-Level	2.21	5.87	2.68
Menu	0.14	1.22	0.18

6.3 Keying and Think Times

The minimum, the average, and the maximum keying and think times must be reported for each transaction type. [Clause 8.1.6.3]

Keying Times			
Type	**Average**	**Maximum**	**Minimum**
New-Order	18.01	18.10	18.00
Payment	3.01	3.08	3.00
Order-Status	2.01	2.08	2.00
Delivery	2.01	2.08	2.00
Stock-Level	2.01	2.06	2.00

Think Times			
Type	**Average**	**Maximum**	**Minimum**
New-Order	12.05	120.51	0.00
Payment	12.03	120.52	0.00
Order-Status	10.14	100.49	0.00
Delivery	5.03	50.50	0.00
Stock-Level	5.06	50.50	0.00

6.4 Graphs

Response Time frequency distribution curves (see Clause 5.6.1) must be reported for each transaction type. [Clause 8.1.6.4]

The performance curve for response times versus throughput (see Clause 5.6.2) must be reported for the New-Order transaction. [Clause 8.1.6.5]

Think Time frequency distribution curves (see Clause 5.6.3) must be reported for each transaction type. [Clause 8.1.6.6]

Keying Time frequency distribution curves (see Clause 5.6.4) must be reported for each transaction type. [Clause 8.1.6.7]

A graph of throughput versus elapsed time (see Clause 5.6.5) must be reported for the New-Order transaction. [Clause 8.1.6.8]

FIGURE 5: NEW-ORDER RESPONSE TIME DISTRIBUTION

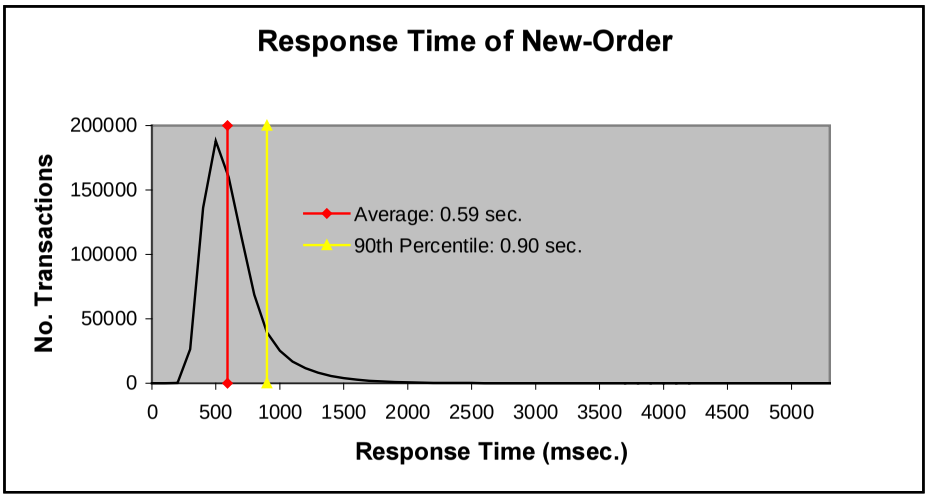

FIGURE 6: PAYMENT RESPONSE TIME DISTRIBUTION

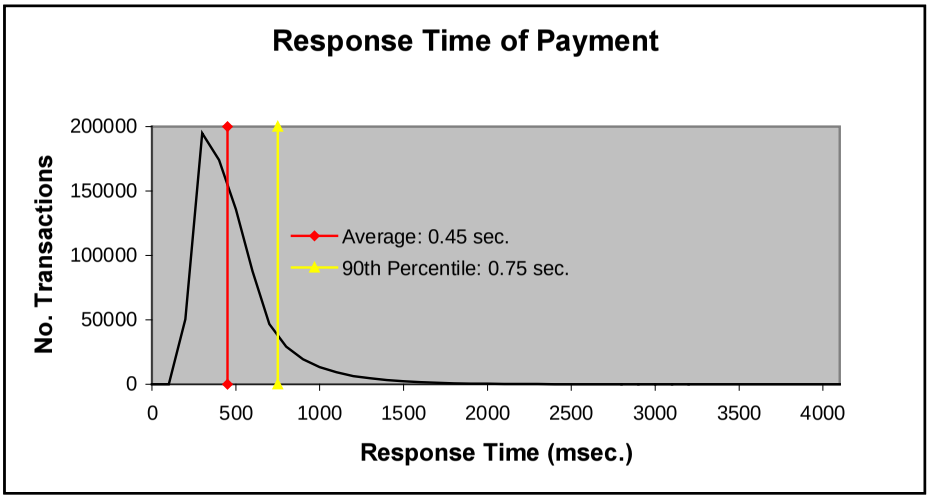

FIGURE 7: ORDER-STATUS RESPONSE TIME DISTRIBUTION

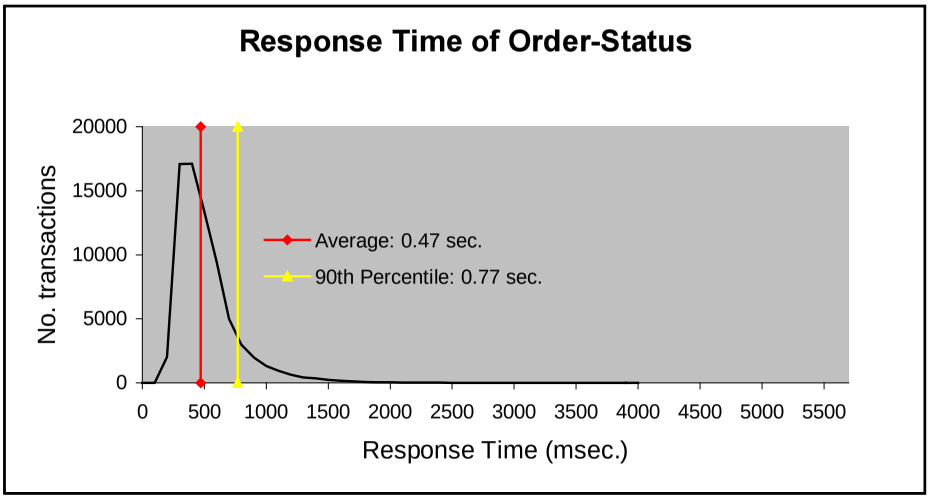

FIGURE 8: DELIVERY RESPONSE TIME DISTRIBUTION

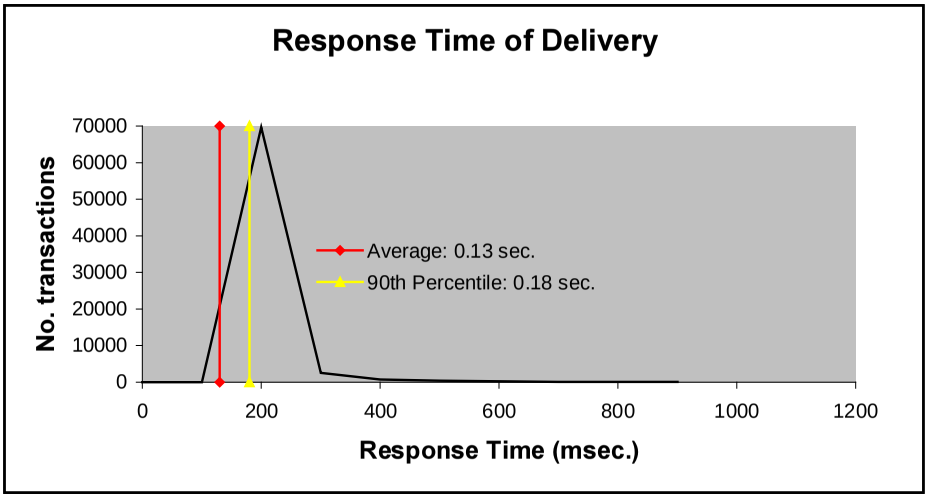

FIGURE 9: STOCK-LEVEL RESPONSE TIME DISTRIBUTION

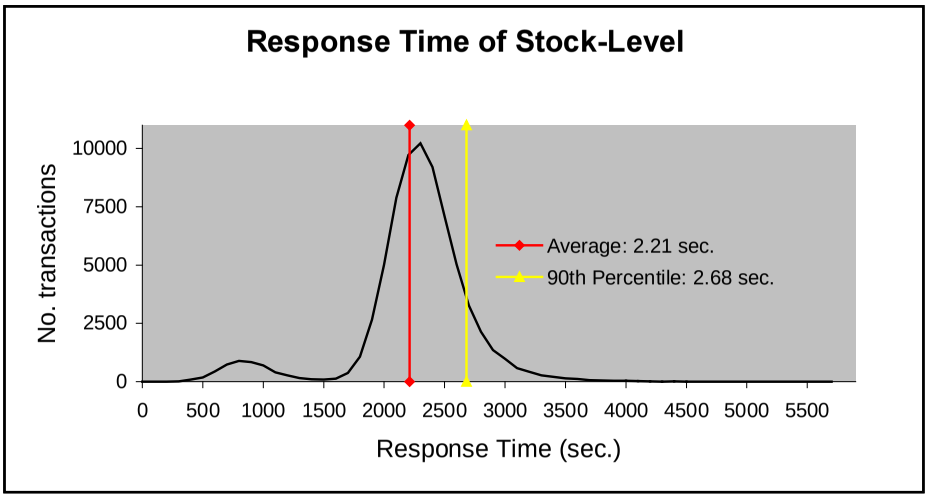

FIGURE 10: RESPONSE TIME VERSUS THROUGHPUT

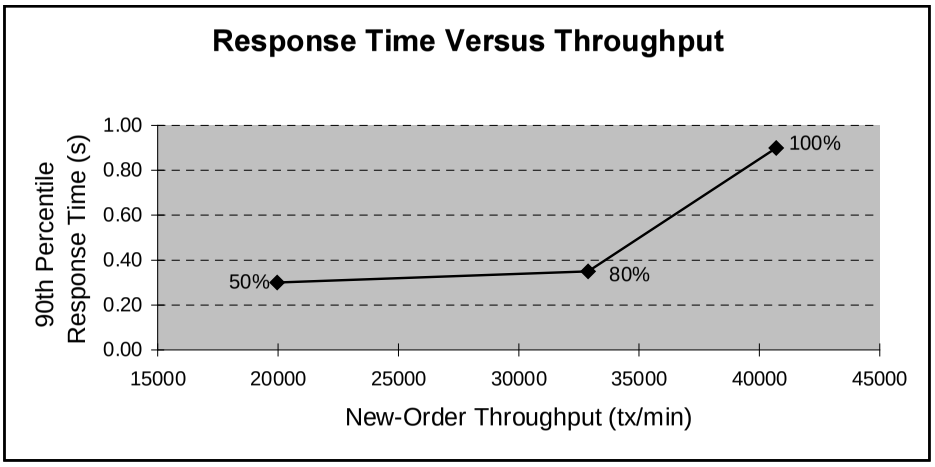

FIGURE 11: NEW-ORDER THINK TIME DISTRIBUTION

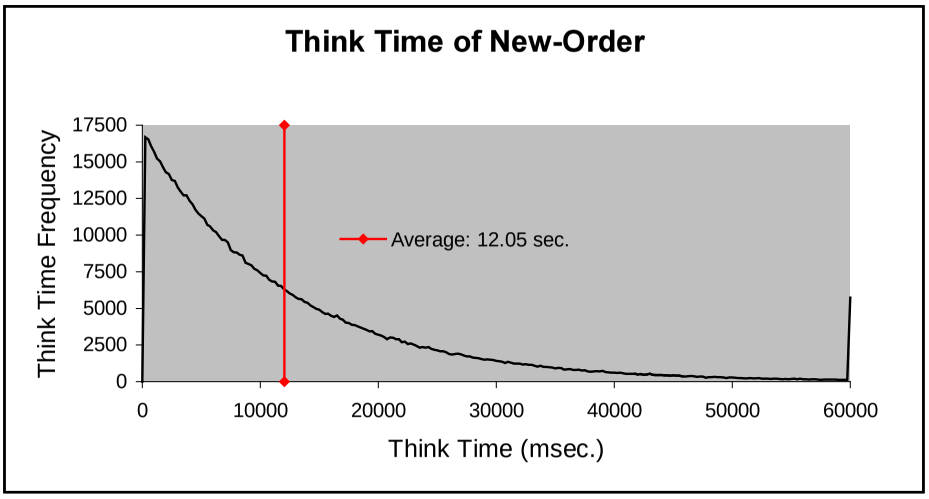

FIGURE 12: THROUGHPUT VERSUS ELAPSED TIME

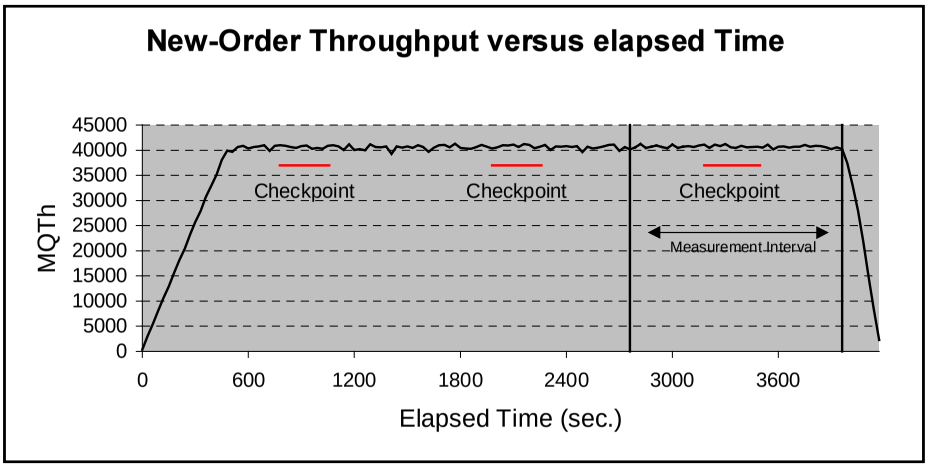

6.5 Steady State Determination

The method used to determine that the SUT had reached a steady state prior to commencing the measurement interval (see Clause 5.5) must be described. [Clause 8.1.6.9]

In all test runs, steady state was achieved before the measurement period began. Steady state was determined to occur based on a visual inspection of tpmC versus time (see graph in section 6.4).

The graph in section 6.4 illustrates that the measurement period was within the steady state period for the run. One checkpoint occurred during the measurement period.

6.6 Work Performed

A description of how the work normally performed during a sustained test (for example checkpointing, writing redo/undo log records, etc.), actually occurred during the measurement interval must be reported. [Clause 8.1.6.10]

The RTE generated the required input data to choose a transaction from the menu. This data was timestamped and captured in RTE log files before being transmitted. There was one log file for each user. The input screen for the requested transaction was returned and it was also captured and timestamped in the RTE log files. The difference between these two timestamps was the menu response time.

The RTE generated the required input data for the chosen transaction. It waited to complete the minimum required key time before transmitting the input screen. The transmission was timestamped and captured in RTE log files. The return of the screen with the required response data was timestamped and captured in the RTE log files. The difference between these two timestamps was the response time for that transaction.

The RTE then waited the required think time interval before repeating the process starting at selecting a transaction from the menu.

The RTE transmissions were sent to Internet Information Server running on the client machines through Ethernet LANs. Internet Information Server handled all screen I/O as well as all requests to the database on the server. Internet Information Server communicated with the database server over COM+ which was used as transaction monitor.

All database operations like update, select, delete and insert are performed by one of the TPC-C back end programs. The TPC-C backend program commits the transaction after all the corresponding operations are done.

Modified database buffers are migrated to disk a least-recently-used basis independent of transaction commits. In addition, every block modification is protected by log records. Asynchronously the log buffers are flushed to a log file on disk either when the transaction is committed or when the log buffer's fill state reaches it's limit. The log buffer's always flushed by a commit before it become full.

To perform checkpoints at specific intervals, we set SQL server recovery interval to the maximum allowable value and wrote a script to schedule multiple checkpoints at specific intervals. By setting the trace flag #3502, SQL Server logged the checkpoint beginning and ending time in the ERRORLOG file. The script included a wait time between each checkpoint equal to the measurement interval which was 20 minutes. The checkpoint script was started manually after the RTE had all users logged in and sending transactions.

At each checkpoint, Microsoft SQL Server wrote to disk all memory pages that had been updated but not yet physically written to disk. Upon completion of the checkpoint, Microsoft SQL Server wrote a special record to the recovery log to indicate that all disk operations had been satisfied to this point.

6.7 Reproducibility

A description of the method used to determine the reproducibility of the measurement results must be reported. [Clause 8.1.6.11]

The Primergy K800 system test was run twice to ensure the reproducibility of the results. The reproducibility test run under exactly the same conditions as the reported test. All tests conform to the TPC rules.

The tpmC result from the reproducibility test was within 0.17% of the reported tpmC.

In the following, both results are shown to document the reproducibility:

	tpmC
reported test	40,696.25
reproducibility test	40,627.25

6.8 Duration of Measurement

A statement of the duration of the measurement interval for the reported Maximum Qualified Throughput (tpmC) must be included. [Clause 8.1.6.12]

The measurement interval of the Primergy K800 system test was 20 minutes. This measurement interval corresponds to the amount of time from the beginning of one checkpoint to the beginning of the next (which, actually, is less than the amount of time it takes to fill a log file).

6.9 Regulation of Transaction Mix

The method of regulation of the transaction mix (e.g., card decks or weighted random distribution) must be described. If weighted distribution is used and the RTE adjusts the weights associated with each transaction type, the maximum adjustments to the weight from the initial value must be disclosed. [Clause 8.1.6.13]

The transaction mix was regulated by weighted distribution. The chosen weights meet the required minimum percentages of the mix which are described in Clause 5.2.3 of the Standard Specifications. No adjustments were made by the RTE.

6.10 Transaction Mix

The percentage of the total mix for each transaction type must be disclosed. [Clause 8.1.6.14]

	Percentage
New-Order	44.79 %
Payment	43.09 %
Order-Status	4.04 %
Delivery	4.06 %
Stock-Level	4.02 %

6.11 Transaction Statistics

The percentage of New-Order transactions rolled back as a result of invalid item number must be disclosed. [Clause 8.1.6.15]

The average number of order-lines entered per New-Order transaction must be disclosed. [Clause 8.1.6.16]

The percentage of remote order-lines entered per New-Order transaction must be disclosed. [Clause 8.1.6.17]

The percentage of remote Payment transactions must be disclosed. [Clause 8.1.6.18]

The percentage of customer selections by customer last name in the Payment and Order-Status transactions must be disclosed. [Clause 8.1.6.19]

The percentage of Delivery transactions skipped due to there being fewer than necessary orders in the New-Order table must be disclosed. [Clause 8.1.6.20]

The numerical quantities which are required in Clause 8.1.6.15 to 8.1.6.20 are already listed in a table above (see section 3.5).

6.12 Checkpoint Statistics

The number of checkpoints in the Measurement Interval, the time in seconds from the start of the Measurement Interval to the first checkpoint and the Checkpoint Interval must be disclosed. [Clause 8.1.6.21]

There were 2 checkpoints before and one during the measurement interval. The third checkpoint occurred 7 minutes after the start of the measurement interval. The checkpoint interval was 1200 seconds. The duration of the checkpoint during measurement was 315 seconds.

7. Clause 6 Related Items - SUT, Driver, and Communication Definition

7.1 RTE Inputs

If the RTE is commercially available, then its inputs must be specified. Otherwise, a description must be supplied of what inputs (e.g., scripts) to the RTE had been used. [Clause 8.1.7.1]

Microsoft Benchcraft was used as the RTE to emulate the terminals. Its input parameters are shown in Appendix C - Tunable Parameters and Options.

We used COM+ to simulate terminal users, generate random data, record response times and statistical data. Its input parameters are shown in Appendix C - Tunable Parameters and Options.

7.2 Functionality and Performance of Emulated Components

It must be demonstrated that the functionality and performance of the components being emulated in the Driver System are equivalent to that of the priced system. The results of the test described in Clause 6.6.3.4 must be disclosed. [Clause 8.1.7.2]

The Driver System consisted of a Primergy 870-40. This driver was attached to the client machine through an Ethernet LAN. Since this is exactly the same connectivity as configured in the priced system, no component was emulated. Therefore, the test described in Clause 6.6.3.4 was not required.

7.3 Functional Diagrams of the Benchmarked and Proposed Configuration

A complete functional diagram of both the benchmark configuration and the configuration of the proposed (target) system must be disclosed. A detailed list of all software and hardware functionality being performed on the Driver System, and its interface to the SUT must be disclosed (see Clause 6.6.3.6). [Clause 8.1.7.3]

Figure 1 and Figure 2 in section 1.4 show the functional diagrams of the benchmark configuration and the priced configuration.

7.4 Network Configurations of the Tested and Proposed Services

The network configurations of both the tested services and the proposed (target) services which are being represented and a thorough explanation of exactly which parts of the proposed configuration are being replaced with the Driver System must be disclosed (see Clause 6.6.4). [Clause 8.1.7.4]

Figure 1 and Figure 2 in section 1.4 show the network setup of both configurations. The driver replaces the workstations.

In the tested configuration one standard ethernet LAN segment was used to connect the server with the clients and 7 standard ethernet LAN segments were used to connect each of the 5 clients with the 5 RTE systems.

In the priced configuration 35 standard ethernet LAN segments were used to connect 32,900 workstations. Each client has 6580 users connected with 7 ethernet segments.

7.5 Network Bandwidth

The bandwidth of the network(s) used in the tested / priced configuration must be disclosed. [Clause 8.1.7.5]

The Ethernet used in the local area network (LAN) between the emulated user system and the front-end system complies with the IEEE 802.3 standard. Its bandwith is 10 Mbps. Between front-end and SUT the bandwidth is 100 Mbps.

7.6 Operator Intervention

If the configuration requires operator intervention (see Clause 6.6.6), the mechanism and the frequency of this intervention must be disclosed. [Clause 8.1.7.6]

The Primergy K800 requires no operator intervention to sustain the reported throughput.

8. Clause 7 Related Items - Pricing

8.1 System Pricing

A detailed list of hardware and software used in the priced system must be reported. Each separately orderable item must have vendor part number, description, and release/revision level, and either general availability status or committed delivery date. If package-pricing is used, vendor part number of the package and a description uniquely identifying each of the components of the package must be disclosed. Pricing source(s) and effective date(s) of price(s) must also be reported. [Clause 8.1.8.1]

The total 5-year price of the entire configuration must be reported, including: hardware, software, and maintenance charges. Separate component pricing is recommended. The basis of all discounts used must be disclosed. [Clause 8..1.8.2]

The details of the hardware and software are reported in the summary in front of this report. The spreadsheet used to determine the 5-year price and the speadsheet used to describe the priced configuration can be found in Appendix D - Pricing Details.

8.2 Availability Dates

The committed delivery date for general availability (availability date) of products used in the price calculations must be reported. When the priced system includes products with different availability dates, the reported availability date for the priced system must be the date at which all components are committed to be available. [Clause 8.1.8.3]

All hardware and software components used in the price calculations of the Primergy K800 system will be generally available from Fujitsu Siemens Computers GmbH as of January 1, 2000.

8.3 Throughput and Price/Performance

A statement of the measured tpmC, as well as the respective calculations for 5-year pricing, price/performance (price/tpmC), and the availability date must be included. [Clause 8.1.8.4]

Primergy K800 system was measured at 40,696.25 tpmC with Microsoft SQL Server 7.0 Enterprise Edition with a 5-year system price of €682,917. The respective price/performance for the Primergy K800 is €16.78/tpmC. The priced Primergy K800 will be available as of January 1, 2000.

8.4 Country Specific Pricing

Additional Clause 7 related items may be included in the Full Disclosure Report for each country specific priced configuration. Country specifiv pricing is subject to Clause 7.1.7 [Clause 8.1.8.5]

The system is being priced for Germany.

8.5 Usage Pricing

For any usage pricing, the sponsor must diclose:

- *Usage level at which the component was priced.*
- *A statement of the company policy allowing such pricing.*

[Clause 8.1.8.6]

The component pricing based on usage is shown below:

- One Microsoft SQL Server, Enterprice Edition 7.0 license (includes unlimited user license)
- One Microsoft Windows NT Server, Enterprise Edition 4.0 license (includes 25 client access licenses)
- Five Microsoft Windows 2000 Server license (includes 25 client access licenses)
- One Microsoft Visual C++ Professional 6.0

9. Clause 8 Related Items - Audit

The auditor's name, address, phone number, and a copy of the auditor's attestation letter indicating compliance must be included in the Full Disclosure Report.

A review of the pricing model is required to ensure that all components required are priced (see Clause 9.2.8). The auditor is not required to review the final Full Disclosure Report or the final pricing prior to issuing the attestation letter. [Clause 8.1.9]

The benchmark test of the Primergy K800 system with Microsoft SQL Server 7.0 Enterprise Edition was independently audited by:

Bradley Askins, a TPC certified auditor of Infosizing.
The attestation letter is included in Appendix F.

Requests for this TPC-C Full Disclosure Report should be sent to:

//
// Function name: MakeAlphaString
//
//=========================================================================

//philipdu 08/13/96 Changed MakeAlphaString to use A-Z, a-z, and 0-9 in
//accordance with spec see below:
//The spec says:
//4.3.2.2      The notation random a-string [x .. y]
//(respectively, n-string [x .. y]) represents a string of random
alphanumeric
//(respectively, numeric) characters of a random length of minimum x,
maximum y,
//and mean (y+x)/2. Alphanumerics are A..Z, a..z, and 0..9.  The only
other
//requirement is that the character set used "must be able to represent a
minimum
//of 128 different characters".  We are using 8-bit chars, so this is a
non issue.
//It is completely unreasonable to stuff non-printing chars into the text
fields.
//-CLevine 08/13/96

[System Summary]

Item    Value
OS Name Microsoft Windows 2000 Server
Version 5.0.2128  Build 2128
OS Manufacturer        Microsoft Corporation
System Name    GRAU
System Manufacturer    FUJITSU SIEMENS
System Model   Pentium II
System Type    X86-based PC
Processor      x86 Family 6 Model 7 Stepping 3 GenuineIntel ~550 Mhz
BIOS Version   PhoenixBIOS Version 4.06  Rev. 1.10.1107
Windows Directory      C:\WINNT
System Directory       C:\WINNT\System32
Boot Device    \Device\Harddisk0\Partition1
Locale  United States
User Name      GRAU\Administrator
Time Zone      W. Europe Standard Time
```

```
Total Physical Memory  261,668 KB
Available Physical Memory     137,784 KB
Total Virtual Memory  895,072 KB
Available Virtual Memory      659,004 KB
Page File Space       633,404 KB
Page File      Not Available

```

This section discloses the Microsoft SQL Server 7.0 Enterprise Edition parameters used on the Primergy K800 server system.

```
Microsoft SQL Server Startup Parameters:

sqlservr -c -x -T3502 -g37

where:
-c Start SQL Server independently of the Windows NT Service Control Manager
-x Disables the keeping of CPU time and cache-hit ratio statistics
-T3502 Prints a message to the SQL Server log at start and end of each checkpoint
-g37 memory in MB reserved for memory requests outside the buffer pool

Microsoft SQL Server Stack Size:

The default stack size for Microsoft SQL Server 7.0 was changed using the EDITBIN utility:
editbin /STACK:131072

Microsoft SQL Server Configuration Parameters:

Appendix D - Pricing Details

This appendix contains the calculations used to determine the number of disk drives and the number of LAN segments necessary in the priced configuration and the spreadsheet used to determine the price/performance figure.

180 Day Space Calculation

The following worksheet was used to calculate the 180 day space of the system. Note: Numbers are in 2K pages unless otherwise specified

Note : Numbers are in KBytes unless otherwise specified						
Warehouses	3290	tpmC	40696	tpmC/W	12.37	
Table	Rows	Data	Index	5% Space	8H Space	Total Space
Warehouse	3,290	352	40	20		412
District	32,900	3,656	72	186		3,914
Item	100,000	9,528	96	481		10,105
New-order	29,610,000	468,144	1,304		263,200	732,648
History	98,700,000	5,483,472	0		1,085,254	6,568,726
Orders	98,700,000	3,025,288	1,670,984		929,456	5,625,728
Customer	98,700,000	71,781,824	4,609,240	3,819,553		80,210,617

MegaRAID Enterprise 1500-H, PCI SCSI Disk Array Controller Quotation

Price Quote

MegaRAID Product	Qty 1-15	Description
MegaRAID Enterprise 1500-H	**2140.00 Euro**	**Enterprise 1500-H, P/N 4674536264, 4CH, 64MB SDRAM & BBU**
Product Warranty	**58.50 Euro Per Unit**	**Extended Warranty for two years**

Distinguishing Features:
⇒ Boot-up Configuration Utility
⇒ AMI high performance RAID Firmware on Flash EPROM
⇒ Support for Low Voltage Differential

Conditions:
- All pricing are quoted FOB factory, Norcross, GA. Shipping and insurance are additional.
- Quotation is subject to the execution of a Purchase Agreement.
- 3 years limited warranty with optional 2 years extended warranty for amount of $60 per unit.
- RMA is in accordance with AMI's standard. Return and Repair within 7 days.
- Product is available now.

Deliverables:
- Products will ship in bulk packaging or individually depending on quantity, each sealed in an anti-static bag.
- Manuals and Driver(s).

Submitted by: Jason Sabatino
RAID Program Manager

This quotation is valid for 90 days from the date shown and is subject to the conditions as listed.

ANGEBOT

D-Link DEUTSCHLAND

Gültigkeit bis 17.02.00

Projekt: SIE061199/1

Sehr geehrter Herr Isenberg,

Wir können Ihnen für das avisierte Projekt die unten aufgeführten Produkte zu folgenden Konditionen anbieten:

DES-1008 8 x 10/100Mbit Nway Switch	3 Stück	á 204,50 Euro
DE-809TC 8 x TP, 1x Coax 10Mbit Hub	4500 Stück	á 29,- Euro

Der angegebene Preis versteht sich netto/netto ex warehouse und bezieht sich auf das Gesamtprojekt, den nachfolgend genannten Auslieferungszeitraum und die oben aufgelistete Stückzahl. Da dieser Preis auf dem aktuellen Dollarkurs basiert, muß bei einer Kursänderung um +3% und mehr der Preis des Produktes entsprechend angepaßt werden.

Wir erwarten die Zahlung innerhalb 30 Tage, rein netto.

Die Lieferung erfolgt innerhalb von 4 Wochen nach Eingang der Bestellung. Bei rechtzeitiger Ankündigung ist die Auslieferung anderer Lotgrößen möglich.
Bitte beziehen Sie sich bei der entsprechenden Bestellung auf die oben aufgeführte Projektkennzeichnung.

Mit freundlichen Grüßen

D-Link Deutschland GmbH

Ralf Dilthey

Dear Mr. Bathe:

Here is the information you requested regarding U.S. pricing of several Microsoft products to be used in conjunction with TPC-C benchmark testing.

Microsoft SQL Server 7.0, Enterprise Edition w/SP2 (one server w/ unlimited CALs)
870-00215 *SQL Svr Ent 7.0 CD Unlim Clt* 34688.66 Euro

Microsoft Windows NT Server 4.0, Enterprise Edition (one server w/ 25 CALs)
770-00328 *WinNT Svr Ent 4.0 CD 25 Clt SP4* 3959.75 Euro

Windows 2000 Server (one server w/ 25 CALs, no discount for additional servers)
C11-00027 *Windows Svr 2000 CD 25 Clt* 1410.4 Euro

Visual C++ Professional 6.0 (single copy)
048-00301 *VC++ Pro 6.0 Win32 CD Refresh* 488.97 Euro

3-year maintenance for above software @ $3500/yr
10,000 Euro

This quote is valid for the next 90 days. Some products may not be currently orderable but will be available through Microsoft's normal distribution by December 31, 1999.

If I can be of any further assistance, please contact me at 425-936 5301 or tomkr@microsoft.com.

Yours truly,

Thomas Kreyche

49 5251 8 20409

Dear Mr. Bathe:

Congratulations on your new TPC-C result - breaking 40k tpmC using Microsoft SQL Server! It is my understanding that you've achieved the following result:

Hardware platform:	PRIMERGY K[illegible] Intel Pentium III Xeon, 550MHz 2MB Cache, 8 Processors
Database version:	SQL Server 7.0
Performance:	40,000 tpmC (approx)
Price/Performance:	16 EUR/tpmC (approx)

I'm pleased to give you permission to publish these results and look forward to working with you in the future.

If I can be of any further assistance, please contact me at (425) 936 5301 or tomkr@microsoft.com.

Yours truly,

Tom Kreyche

Appendix F - Attestation Letter

Benchmark Sponsor: Franz-Josef Bathe
Fujitsu Siemens Computers
Heinz-Nixdorf-Ring 1
D-33106 Paderborn, Germany

December 12, 1999

I remotely verified the TPC Benchmark™ C performance of the following Client Server configuration:

Platform:	**Siemens Primergy K800**
Operating system:	**Microsoft Windows NT 4.0 Enterprise Edition**
Database Manager:	**Microsoft SQL Server 7.0 Enterprise Edition**
Transaction Manager:	**Microsoft COM+ (Included in Windows 2000)**

The results were:

CPU's Speed	Memory	Disks	NewOrder 90% Response Time	**tpmC**
8 x Pentium III Xeon (550 MHz)	4 GB Main (2MB L2 Cache per processor)	385 x 9 GB 8 x 36 GB	0.90 Seconds	**40,696.25**
Five (5) Clients: Primergy 170 (Specification for each)				
1 x Pentium III (550 MHz)	256 MB Main Cache: 512 KB	1 x 4 GB	n/a	n/a

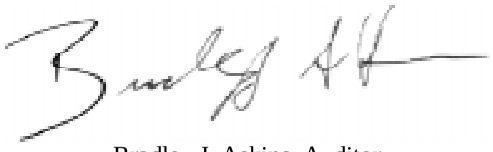
In my opinion, these performance results were produced in compliance with the TPC's requirements for the benchmark. The following verification items were given special attention:

- The database records were the proper size
- The database was properly scaled and populated
- The required ACID properties were met

- The transactions were correctly implemented
- Input data was generated according to the specified percentages
- The transaction cycle times included the required keying and think times
- The reported response times were correctly measured.
- All 90% response times were under the specified maximums
- At least 90% of all delivery transactions met the 80 Second completion time limit
- The reported measurement interval was 20 minutes (1200 seconds)
- The reported measurement interval was representative of steady state conditions
- One checkpoint was taken during the reported measurement interval
- The repeatability of the measured performance was verified
- The 180 day storage requirement was correctly computed
- The system pricing was verified for major components and maintenance

Respectfully Yours,

François Raab, President



Bradley J. Askins, Auditor
