TPCx-HS Version	v2.0.3
Report Edition	Second
Report Submitted	November 16, 2018

Second Edition - November 2018

Dell Inc. (Dell), *the Sponsor of this benchmark test, believes that the information in this document is accurate as of the publication date. The information in this document is subject to change without notice. The Sponsor assumes no responsibility for any errors that may appear in this document.*

The pricing information in this document is believed to accurately reflect the current prices as of the publication date. However, the Sponsor provides no warranty of the pricing information in this document.

Benchmark results are highly dependent upon workload, specific application requirements, and system design and implementation. Relative system performance will vary because of these and other factors. Therefore, the TPC Express Benchmark™ V should not be used as a substitute for a specific customer application benchmark when critical capacity planning and/or product evaluation decisions are contemplated.

All performance data contained in this report was obtained in a rigorously controlled environment. Results obtained in other operating environments may vary significantly. No warranty of system performance or price/performance is expressed or implied in this report.

The Dell products, services or features identified in this document may not yet be available or may not be available in all areas and may be subject to change without notice. Consult your local Dell business contact for information on the products or services available in your area. You can find additional information via Dell's web site at www.dell.com. Actual performance and environmental costs of Dell products will vary depending on individual customer configurations and conditions.

Abstract

This document contains the methodology and results of the TPC Express Benchmark™ HS (TPCx-HS) test conducted in conformance with the requirements of the TPCx-HS Standard Specification, Revision v2.0.3.

The benchmark results are summarized below.

Measured Configuration			
Company Name	Cluster Node	Hadoop Software	Operating System
Dell	Dell PowerEdge R6415	Cloudera Enterprise Edition 6.0	Red Hat Enterprise Linux Server Release 7.5

TPC Express Benchmark™ HS Metrics			
Total System Cost	HSph@1TB	Price/Performance	Availability Date
$507,648	11.01	$46,107.91	October 9, 2018

Executive Summary

The Executive Summary follows on the next several pages.

Table of Contents

Clause 0 –   Preamble

0.1   TPC Express Benchmark™ HS Overview

The TPC Express Benchmark™ HS (TPCx-HS) was developed to provide an objective measure of hardware, operating system and commercial Apache Hadoop File System API compatible software distributions, and to provide the industry with verifiable performance, price-performance and availability metrics. The benchmark models a continuous system availability of 24 hours a day, 7 days a week.

Even though the modeled application is simple, the results are highly relevant to hardware and software dealing with Big Data systems in general. TPCx-HS stresses both hardware and software including Hadoop run-time, Hadoop File-system API compatible systems and MapReduce layers. This workload can be used to asses a broad range of system topologies and implementation of Hadoop clusters. TPCx-HS can be used to assess a broad range of system topologies and implementation methodologies in a technically rigorous and directly comparable and vendor-neutral manner.

The TPCx-HS kit is available from the TPC (See www.tpc.org/tpcx-hs for more information). Users must sign-up and agree to the TPCx-HS User Licensing Agreement (ULA) to download the kit. Re-distribution of the kit is prohibited. All related work (such as collaterals, papers, derivatives) must acknowledge the TPC and include TPCx-HS copyright. The TPCx-HS Kit includes: TPCx-HS Specification document, TPCx-HS Users Guide documentation, shell scripts to set up the benchmark environment and Java code to execute the benchmark load.

The purpose of TPC benchmarks is to provide relevant, objective performance data to industry users. To achieve that purpose, TPC benchmark specifications require that benchmark tests be implemented with systems, products, technologies and pricing that:

•   Are generally available to users;

•   Are relevant to the market segment that the individual TPC benchmark models or represents (e.g., TPCx-HS models and represents Hadoop run-time and Hadoop File-system API compatible systems);

•   Would plausibly be implemented by a significant number of users in the market segment the benchmark models or represents.

The use of new systems, products, technologies (hardware or software) and pricing is encouraged so long as they meet the requirements above. Specifically prohibited are benchmark systems, products, technologies or pricing (hereafter referred to as "implementations") whose primary purpose is performance optimization of TPC benchmark results without any corresponding applicability to real-world applications and environments. In other words, all "benchmark special" implementations that improve benchmark results but not real-world performance or pricing, are prohibited.

The rules for pricing are included in the TPC Pricing Specification and rules for energy measurement are included in the TPC Energy Specification. Further information is available at www.tpc.org.

Clause 1 – General Items

1.1 Test Sponsor

A statement identifying the benchmark sponsor(s) and other participating companies must be provided

This benchmark was sponsored by Dell Inc..

1.2 Parameter Settings

Settings must be provided for all customer-tunable parameters and options which have been changed from the defaults found in actual products, including by not limited to:

- *Configuration parameters and options for server, storage, network and other hardware component incorporated into the pricing structure;*

- *Configuration parameters and options for operating system and file system component incorporated into the pricing structure;*

- *Configuration parameters and options for any other software component incorporated into the pricing structure;*

- *Compiler optimization options.*

Comment 1: In the event that some parameters and options are set multiple times, it must be easily discernible by an interested reader when the parameter or option was modified and what new value it received each time.

Comment 2: This requirement can be satisfied by providing a full list of all parameters and options, as long as all those that have been modified from their default values have been clearly identified and these parameters and options are only set once.

The supporting files contain the parameters and options used to configure the components involved in this benchmark.

1.3 Configuration Diagrams

Diagrams of both measured and priced configurations must be provided, accompanied by a description of the differences. This includes, but is not limited to:

- *Total number of nodes used;*

- *Total number and type of processors used/total number of cores used/total number of threads used (including sizes of L2 and L3 caches);*

- *Size of allocated memory, and any specific mapping/partitioning of memory unique to the test;*

- *Number and type of disk units (and controllers, if applicable;*

- *Number of channels or bus connections to disk units, including their protocol type;*

- *Number of LAN (e.g., Ethernet) connections and speed for switches and other hardware components physically used in the test or are incorporated into the pricing structure;*

- *Type and the run-time execution location of software components.*

1.3.1 Measured Configuration

16x Dell PowerEdge R6415 Servers (Data Nodes)
- 1x AMD EPYC 7551P 32-Core Processor
- 256 GB (8x 32GB RDIMM 2666MT/s Dual Rank)
- 1x 120GB SSD SATA 2.5in Hot-plug Drive
- 1x Mellanox Dual Port 25GbE SFP28 NIC
- 2x Dell 1.6TB, NVMe, 2.5 SFF Drive

Dell S-Series (S5148F-ON) 48x25GbE and 6x100GbE Network Switch.

1x Dell PowerEdge R6415 Server (Master Node)
- 1x AMD EPYC 7551P 32-Core Processor
- 256 GB (8x 32GB RDIMM 2666MT/s Dual Rank)
- 1x 120GB SSD SATA 2.5in Hot-plug Drive
- 1x Mellanox Dual Port 25GbE SFP28 NIC

Figure 1-1 Measured Configuration

The measured configuration consisted of:

- Total Nodes: 17 (17x Dell PowerEdge R6415; 16x Dell PowerEdge R6415)
- Total Processors/Cores/Threads: 17/544/1,088
- Total Memory: 4.25TiB
- Total Number of Storage Drives/Devices: 49
- Total Storage Capacity: 53.24TB

Server node details:

- 17x Dell PowerEdge R6415 Servers, each with:
  - Processors/Cores/Threads: 1/32/64
  - Processor Model: AMD EPYC 7551P 32-Core
  - Memory: 256 GiB
  - Controller: Perc H740P
  - Drives:
    - 1x 120 GB SSD SATA (all nodes)
    - 2x Dell 1.6TB NVMe (Data Nodes)
  - Network: 1x Mellanox Dual Port 25GbE SFP28 NIC

Network connectivity detail:

- Dell S-Series (S5148F-ON) Network Switch

The distribution of software components over server nodes is detailed in section 1.5.

1.3.2 Priced Configuration

There are no differences between the priced configuration and the measured configuration.

1.4   Dataset Distribution

The distribution of dataset across all media must be explicitly described.

Table 1-1 describes the distribution of the dataset across all media in the system.

Server Node	Controller	Disk Drive	Description of Content
1	Perc H740p	sda	Operating System, Root, Swap, Hadoop Master
2-3	Perc H740p	sda	Operating System, Root, Swap, Hadoop Master
2-3	NVMe	nvme0n1, nvme1n1	Data, Temp
4-17	Perc H740p	sda	Operating System, Root, Swap, Hadoop Master
4-17	NVMe	nvme0n1, nvme1n1	Data, Temp

Table 1-1Dataset Distribution

1.5   Software Components Distribution

The distribution of various software components across the system must be explicitly described.

Table 1-2 Describes the distribution of the software components across the system.

Node	Map/Reduce		HDFS		ZooKeeper	Spark
	Resource Manager	Node Manager	NameNode	DataNode	QuorumPeer	HistoryServer
1	X		X		X	X
2-3		X		X	X	
4-17		X		X		

Table 1-2 Software Component Distribution

Distributed file system implementation and corresponding Hadoop File System API version must be disclosed.

Cloudera Enterprise Edition 6.0 (fully HDFS compatible at the API level).

Map/Reduce implementation and corresponding version must be disclosed.

Cloudera Enterprise Edition 6.0 (compatible equivalent to Hadoop 3.0.0 and Spark 2.2.0).

Clause 2 – Workload Related Items

2.1 Hardware & Software Tunables

Script or text used to set for all hardware and software tunable parameters must be reported.

The Supporting File Archive contains all configuration scripts.

2.2 Run Report

The run report generated by TPCx-HS benchmark kit must be reported.

The Supporting File Archive contains the full run report. Following are extracts from the run report that lists the performance summary for both runs.

```
Run Report for Run 1 – Performance Run
=====================================================
TPCx-HS Performance Metric (HSph@SF) Report

Test Run 1 Details       Total Time =                    327
                         Total Size =            10000000000
                         Scale-Factor =                    1

TPCx-HS Performance Metric (HSph@SF):          11.0132

=====================================================

Run Report for Run 2 – Repeatability Run
=====================================================
TPCx-HS Performance Metric (HSph@SF) Report

Test Run 2 Details       Total Time =                    327
                         Total Size =            10000000000
                         Scale-Factor =                    1

TPCx-HS Performance Metric (HSph@SF):          11.0132

=====================================================
```

2.3 Benchmark Kit Identification

Version number of TPCx-HS kit and checksum for HSGen, HSSort and HSValidate Programs must be reported.

Kit Version   2.0.3

File	MD5
BigData_cluster_validate_suite.sh	57f7cd68251a9aba0feb6648630ff5da
HSDataCheck.sh	faeff3091759aac98080be4e39f7896a
TPCx-HS-master_Spark.jar	19f3ce092066e056b884a85ee92fb7fc
TPCx-HS-master.sh	c619a0819571ecd00cd75d2b76ba8c64

2.4 Benchmark Kit Changes

No modifications were made to the TPC-provided kit.

Clause 3 –   SUT Related Items

3.1   Data Storage Ratio

The data storage ratio must be disclosed.

Table 3-1 describes the details of the storage devices configured on the system and their capacity.

Qty	Capacity	Total	Total (TB)
17	120GB	2,040GB	2.04
32	1.6TB	51.2TB	51.20
Total Storage (TB)			**53.24**

Table 3-1 Storage Device Capacities

Scale Factor = 1

Data Storage Ratio = (Total Storage (TB) / SF) = **53.24**

3.2   Memory Ratio

The Scale Factor to memory ratio must be disclosed.

Total Configured Memory (TiB) = 4.25

Scale Factor to Memory Ratio = (SF / Total Memory(TiB)) = **0.24**

Clause 4 – Metrics Related Items

4.1 HSGen Time

The HSGen time must be disclosed for Run1 and Run2.

	Run 1	Run 2
HSGen	84.340	85.757

Table 4-1 HSGen Times

4.2 HSSort Time

The HSSort time must be disclosed for Run1 and Run2.

	Run 1	Run 2
HSSort	211.093	208.992

Table 4-2 HSSort Times

4.3 HSValidate Time

The HSValidate time must be disclosed for Run1 and Run2.

	Run 1	Run 2
HSValidate	26.644	26.776

Table 4-3 HSValidate Times

4.4 HSDataCheck Times

Both HSDataCheck times must be disclosed for Run1 and Run2.

	Run 1	Run 2
HSDataCheck (pre-sort)	213.000	211.000
HSDataCheck (post-sort)	28.000	29.000

Table 4-4 HSDataCheck Times

4.5 Performance & Price-Performance

The performance metric (HSph@SF) must be disclosed for Run 1 and Run 2. Price-performance metric ($/HSph@SF) must be disclosed for the performance run.

	Run 1	Run 2
HSph@1TB	11.01	11.01

Table 4-5 Performance Metrics

Run 1 Price-Performance: 46,107.91 $/ HSph@1TB

TPC
Certified Auditor

Mr. Nicholas Wakou
Dell Inc.
701 E. Parmer Ln. Bldg. 2
Austin, TX 78753

November 16, 2018

I verified the TPC Express Benchmark™ HS v2.0.3 performance of the following configuration:

Platform:	Dell PowerEdge R6415 (with 17x Dell PowerEdge R6415 Servers)
Operating System:	Red Hat Enterprise Linux Server 7.5
Apache Hadoop Compatible Software:	Cloudera Enterprise Edition V6.0 (Spark)

The results were:

Performance Metric	**11.01 HSph@1TB**
Run Elapsed Time	327.00 Seconds

Cluster	**17x Dell PowerEdge R6415 Servers, each node with:**		
CPUs	1 x AMD EPYC 7551P (2.00 GHz, 32-core, 64 MB L3)		
Memory	256 GB		
Storage	**Qty**	**Size**	**Type**
	1	120GB	SSD SATA (All nodes)
	2	1.6TB	NVMe (Data nodes)

In my opinion, these performance results were produced in compliance with the TPC requirements for the benchmark.

The following verification items were given special attention:

- All TPC-provided components were verified to be v2.0.3
- No modifications were made to any of the Java code
- Any and all modifications to shell scripts were reviewed for compliance
- All checksums were validated for compliance
- The generated dataset was properly scaled to 1TB
- The generated dataset and the sorted dataset were replicated 3-ways

63 Lourdes Dr. | Leominster, MA 01453 | 978-343-6562 | www.sizing.com

- The elapsed times for all phases and runs were correctly measured and reported
- The Storage and Memory Ratios were correctly calculated and reported
- The system pricing was verified for major components and maintenance
- The major pages from the FDR were verified for accuracy

Additional Audit Notes:

The initial audit was completed on October 8, 2018. A correction to the Cloudera line item Unit Price was reviewed as part of the required FDR revision process.

Respectfully Yours,

Doug Johnson, Certified TPC Auditor
