Telecommunications Technology Association (TTA), the Sponsor of this benchmark test, believes that the information in this document is accurate as of the publication date. The information in this document is subject to change without notice. The Sponsor assumes no responsibility for any errors that may appear in this document.

The pricing information in this document is believed to accurately reflect the current prices as of the publication date. However, the Sponsor provides no warranty of the pricing information in this document.

Benchmark results are highly dependent upon workload, specific application requirements, and system design and implementation. Relative system performance will vary because of these and other factors. Therefore, the TPC Express Benchmark™ V should not be used as a substitute for a specific customer application benchmark when critical capacity planning and/or product evaluation decisions are contemplated.

All performance data contained in this report was obtained in a rigorously controlled environment. Results obtained in other operating environments may vary significantly. No warranty of system performance or price/performance is expressed or implied in this report.

TTA and the TTA Logo are trademarks of Telecommunications Technology Association and/or its affiliates in the U.S. and other countries. Third party trademarks mentioned are the property of their respective owners. The use of the word partner does not imply a partnership relationship between TTA and any other company

TPC Express Benchmark™ IoT, TPCx-IoT, and IoTps, are registered certification marks of the Transaction Processing Performance Council.

The TTA products, services or features identified in this document may not yet be available or may not be available in all areas and may be subject to change without notice. Consult your local TTA business contact for information on the products or services available in your area. You can find additional information via TTA's web site at <https://www.tta.or.kr/>. Actual performance and environmental costs of TTA products will vary depending on individual customer configurations and conditions.

Abstract

TTA conducted the TPC Express Benchmark™ IoT (TPCx-IoT) on the KTNF KR580S1. The software used included Machbase 5.7.3. This report provides full disclosure of the methodology and results. All testing was conducted in conformance with the requirements of the TPCx-IoT Standard Specification, Revision 1.0.4.

The benchmark results are summarized below.

Configuration Summary

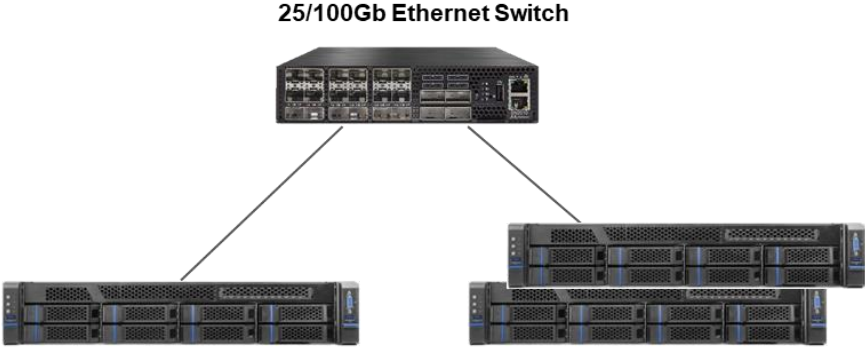

Sponsor	Cluster Nodes	Storage Software	Operating System
TTA	1x KR580S1 (Master) 2x KR580S1 (Data)	Machbase 5.7.3	CentOS Linux 7.6.1810

TPC Express Benchmark™ IoT Metrics

Total System Cost (USD)	IoTps	USD/IoTps	Availability Date
\$344,548	1,043,276.60	\$0.34	Currently Available

Clause 0 Preamble

0.1 TPC Express Benchmark™ IoT Overview

TPC Express Benchmark™ IoT (TPCx-IoT) was developed to provide an objective measure of hardware, operating system and commercial NoSQL database software distributions, and to provide the industry with verifiable performance, price-performance and availability metrics. The benchmark models a continuous system availability of 24 hours a day, 7 days a week.

Even though the modeled application is simple, the results are highly relevant to hardware and software dealing with IoT gateway systems in general. TPCx-IoT stresses both hardware and software including database APIs and network connections to the database. This workload can be used to assess a broad range of NoSQL databases. TPCx-IoT can be used to assess a range of NoSQL implementations in a technically rigorous and directly comparable and vendor-neutral manner. The metric effectively represents the total number of records that can be inserted into a NoSQL database per second while running queries against the database.

The TPCx-IoT kit is available from the TPC (See www.tpc.org/tpcx-iot for more information). Users must sign up and agree to the TPCx-IoT User Licensing Agreement (ULA) to download the kit. Redistribution of the kit is prohibited. All related work (such as collaterals, papers, derivatives) must acknowledge the TPC and include TPCx-IoT copyright. The TPCx-IoT Kit includes: the TPCx-IoT Specification document, the TPCx-IoT Users Guide document, shell scripts to set up the benchmark environment and Java code to execute the benchmark load.

The purpose of TPC benchmarks is to provide relevant, objective performance data to industry users. To achieve that purpose, TPC benchmark specifications require that benchmark tests be implemented with systems, products, technologies and pricing that:

- Are generally available to users;
- Are relevant to the market segment that the individual TPC benchmark models or represents (e.g., TPCx- IoT models and represents a NoSQL database mimicking an IoT gateway system)
- Would plausibly be implemented by a significant number of users in the market segment the benchmark models or represents.

The use of new systems, products, technologies (hardware or software) and pricing is encouraged so long as they meet the requirements above. Specifically prohibited are benchmark systems, products, technologies or pricing (hereafter referred to as "implementations") whose primary purpose is performance optimization of TPC benchmark results without any corresponding applicability to real-world applications and environments. In other words, all "benchmark special" implementations that improve benchmark results but not real-world performance or pricing, are prohibited.

The rules for pricing are included in the TPC Pricing Specification. Further information is available at www.tpc.org.

Clause 1 General Items

1.1 Test Sponsor

A statement identifying the benchmark sponsor(s) and other participating companies must be provided.

This benchmark was sponsored by Telecommunications Technology Association.

1.2 Parameter Settings

Settings must be provided for all customer-tunable parameters and options which have been changed from the defaults found in actual products, including by not limited to:

- *Configuration parameters and options for server, storage, network and other hardware component incorporated into the pricing structure;*
- *Configuration parameters and options for operating system and file system component incorporated into the pricing structure;*
- *Configuration parameters and options for any other software component incorporated into the pricing structure;*
- *Compiler optimization options.*

Comment 1: In the event that some parameters and options are set multiple times, it must be easily discernible by an interested reader when the parameter or option was modified and what new value it received each time.

Comment 2: This requirement can be satisfied by providing a full list of all parameters and options, as long as all those that have been modified from their default values have been clearly identified and these parameters and options are only set once.

The [Supporting Files Archive](#) contains the parameters and options used to configure the components involved in this benchmark.

1.3 Configuration Diagrams

Diagrams of both measured and priced configurations must be provided, accompanied by a description of the differences.

This includes, but is not limited to:

- *Total number of nodes used*
- *Total number and type of processors used/total number of cores used/total number of threads used (including sizes of L2 and L3 caches)*
- *Size of allocated memory, and any specific mapping/partitioning of memory unique to the test*
- *Number and type of disk units (and controllers, if applicable)*
- *Number of channels or bus connections to disk units, including their protocol type*
- *Number of LAN (for example, Ethernet) connections and speed for switches and other hardware components physically used in the test or are incorporated into the pricing structure*
- *Type and the run-time execution location of software components*

1.3.1 Measured Configuration

Figure 1-1 shows the measured configuration.

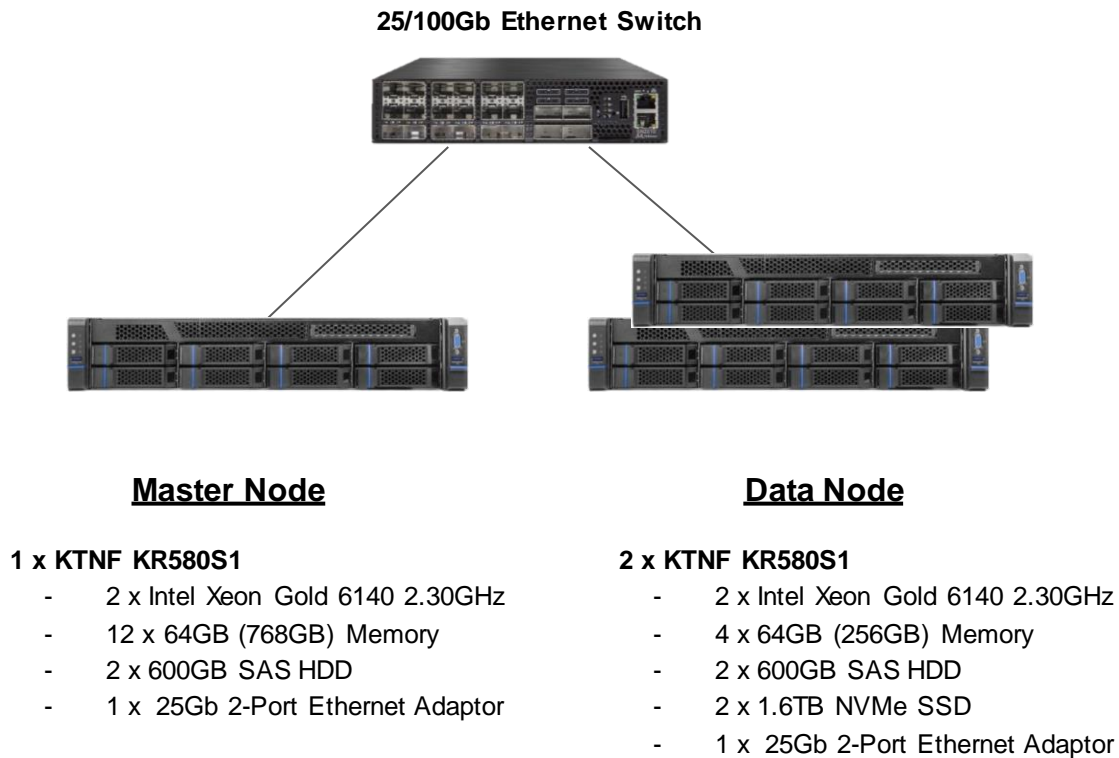

Figure 1-1 Measured Configuration

The measured configuration consisted of:

Total Nodes: 3
 Total Processors/Cores/Threads: 6/108/216
 Total Memory: 1.37
 Total Number of Storage Devices: 10
 Total Storage Capacity: 10.00

Connectivity: Mellanox MSN2010-CB2F 10/25GbE and 100GbE Switch

Servers	1x KR580S1 (Master):	2x KR580S1 (Data):
Processors/Cores/Threads:	2/36/72	2/36/72
Processor Model:	2x Intel® Xeon® Gold 6140 (2.30GHz, 18-core, 24.75 MB L3)	2x Intel® Xeon® Gold 6140 (2.30GHz, 18-core, 24.75 MB L3)
Memory:	768 GiB	256 GiB
Storage Controller:	Broadcom MEGARAID SAS 9361-8i	Broadcom MEGARAID SAS 9361-8i
Storage Devices:	2x 600 GB 10.5K RPM SAS HDD	2x 600 GB 10.5K RPM SAS HDD 2x 1.6 TB NVMe SSD
Network Controller:	Mellanox MCX4121A-ACAT 25G	Mellanox MCX4121A-ACAT 25G

The distribution of software components over server nodes is detailed in section 1.5.

1.3.2 Priced Configuration

There are no differences between the priced configuration and the measured configuration.

1.4 Dataset Distribution

The distribution of dataset across all media must be explicitly described.

Table 1-1 describes the distribution of the dataset across all storage media in the system.

Server	Controller	Disk Drive	Description of Content
1	Megaraid SAS-3 3108	2 x SAS 600GB HDD	Machbase Broker, Operating System, Root, Swap
2, 3	Megaraid SAS-3 3108 U.2 PCIe Gen3	2 x SAS 600GB HDD 2 x 1.6TB NVMe SSD	Operating System, Root, Swap Machbase Data, coordinator

Table 1-1 Dataset Distribution Across Storage Media

1.5 Software Component Distribution

The distribution of various software components across the system must be explicitly described.

Table describes the distribution of the software components across the system.

Server	Broker	Coordinator	Warehouse
1	X		
2		X	X
3			X

Table 1-2 Software Component Distribution Across Nodes

The storage system software used was Machbase 5.7.3.

Clause 2 Workload Related Items

2.1 Hardware and Software Tunable Parameters

Script or text used to set all hardware and software tunable parameters must be reported.

The [Supporting Files Archive](#) contains all configuration scripts.

2.2 Run Report

The run report generated by the TPCx-IoT Kit for Performance Run and Repeatability Run must be reported.

The [Supporting Files Archive](#) contains the full run report. The following excerpts from the run report summarize the Performance Run and the Repeatability Run.

Run Report for Run 1 (Repeatability Run)

```
=====
TPCx-IoT Performance Metric (IoTps) Report
Test Run 1 details :   Total Time For Warmup Run In Seconds = 2,017.764
Test Run 1 details :   Total Time In Seconds = 1,982.044
                        Total Number of Records = 2100000000
```

TPCx-IoT Performance Metric (IoTps): 1059512.3014

Run Report for Run 2 (Performance Run)

```
=====
TPCx-IoT Performance Metric (IoTps) Report
Test Run 2 details :   Total Time For Warmup Run In Seconds = 2,059.186
Test Run 2 details :   Total Time In Seconds = 2,012.889
                        Total Number of Records = 2100000000
```

TPCx-IoT Performance Metric (IoTps): 1043276.6039

2.3 Benchmark Kit Identification

The version of the TPCx-IoT kit and checksums for key files are listed below.

TPCx-IoT Kit Version	1.0.4
----------------------	-------

File	MD5
TPC-IoT-master.sh	1d85705dc67fb3c767d7a1fe8775275f
tpcx-iot/lib/core-0.13.0-SNAPSHOT.jar	7b8c3de667e60b96bd7611de0525ee65
IoT_cluster_validate_suite.sh	1d85705dc67fb3c767d7a1fe8775275f

2.4 Benchmark Kit Changes

No modifications were made to TPC-provided kit.

Clause 3 Scale Factor and Metrics

3.1 Scale Factor, Performance, Price-Performance

The metrics for Run 1 and Run 2 are summarized below.

	Run 1	Run 2
Scale Factor	2100000000	2100000000
Measured Run Time (seconds)	1,982.044	2,012.889
IoTps	1,059,512.30	1,043,276.60

Run2 Price-Performance: 0.34 \$/IoTps.

Letter of Attestation

The auditor's agency name, address, phone number, and Attestation letter must be included in the full disclosure report. A statement should be included specifying who to contact in order to obtain further information regarding the audit process.

This benchmark was audited by Doug Johnson, InfoSizing.

October 31, 2019

I verified the TPC Express Benchmark™ IoT v1.0.4 performance of the following configuration:

Platform: KTNF KR580S1 (3x KR580S1)
 Operating System: CentOS Linux 7.6.1810
 Storage Software: Machbase 5.7.3

The results were:

Performance Metric 1,043,276.60 IoTps
 Run Elapsed Time 2,012.889 Seconds

Cluster	3x KTNF KR580S1, each with:		
CPU	2x Intel® Xeon® Gold 6140 (2.30 GHz, 18-core, 24.75 MB L3)		
Memory	768 GiB (Master node) 256 GiB (Data nodes)		
Storage	Qty	Size	Type
	2	600GB	10.5K RPM SAS HDD (All nodes)
	2	1.6TB	NVMe SSD (Data nodes)

In my opinion, these performance results were produced in compliance with the TPC requirements for the benchmark.

The following verification items were given special attention:

- All TPC-provided components were verified to be v1.0.4
- No modifications were made to any of the Java code
- Any and all modifications to shell scripts were reviewed for compliance
- All checksums were validated for compliance
- The generated dataset was properly scaled to 2100000000 rows
- The dataset was protected with a minimum of two-way replication

63 Lourdes Dr. | Leominster, MA 01453 | 978-343-6562 | www.sizing.com

- The elapsed times for all phases and runs were correctly measured and reported
- The system pricing was verified for major components and maintenance
- The major pages from the FDR were verified for accuracy

Additional Audit Notes:

None.

Respectfully Yours,

A handwritten signature in black ink that reads "Doug Johnson". The signature is written in a cursive style with a long horizontal flourish extending to the right.

Doug Johnson, Certified TPC Auditor

Mellanox Technologies, Ltd

The screenshot shows the Mellanox website interface. At the top, there is a navigation bar with the Mellanox logo, contact information (Call toll-free: (855) 897-1098), a currency selector, and links for 'Sign In Or Register' and 'Return to Mellanox.com'. Below the navigation bar is a search bar and buttons for 'Get a Quote' and 'CART'. A breadcrumb trail reads: Home | Switches | Ethernet Switches | SN2000 | SN2010 | Mellanox MSN2010-CB2F Spectrum Based 10/25GbE and 100GbE 1U Open Ethe... The main product area features a 'Ships same day' badge, the product title 'Mellanox MSN2010-CB2F Spectrum Based 10/25GbE and 100GbE 1U Open Ethernet Switch with Mellanox Onyx 18 SFP28 and 4 QSFP28 Ports RoHS6', and the MPN 'MSN2010-CB2F' with a 'Condition: New' tag. A product image of the switch is shown on the left. To the right of the image is a table of specifications: Availability (Ships same day), MSRP (\$9,567.00), Switch Family (SN2000), Condition (New), Max Ports (18x25GbE & 4x100GbE), Connector Type (QSFP28 & SFP28), Max Speed (100GbE), Operating System (Mellanox Onyx), Technology (Ethernet), ECCN (5A991), and Product Brief (Download MSN2010-CB2F). Further right is a section for 'Add Mellanox Support?' with a dropdown menu set to 'None' and a 'Quantity' selector set to 1. Below these are 'Add to Cart' and 'Get a Quote' buttons. At the bottom of the product area, a banner asks 'Need Certified Refurbished?' with a price comparison: 'Buy for \$9,567.00 and save \$5320.05 (44% off). Shop now'. The footer contains three icons: 'One-Year Hardware Warranty', 'Services & Support Call (855) 897-1098', and 'Mellanox Specialists Send us an Email'.

ITEM DESCRIPTION

(VAT 별도, 단위 : \$)

Part No.	Description	수량	소비자가	공급단가	공급합계
연간기술지원	연간 방문 기술지원 (옵션)				
RSC-LSF3	rockPLACE Support Carepack - Linux Standard (3년) per Server 3 Year, 24x7, 4hr response 기술지원 대상 : Cent OS 이메일, 전화, 원격지원, 현장지원 서비스 - Problem tracking/Emergency assistance - Update, Patch 작업 지원 - 서비스, 시스템 환경, 네트워크 환경 설정 변경 지원 - 인수 시험, 성능 시험, 비상 복구 훈련 지원 - MRG Realtime 기술지원 포함	3	4,614	1,538	4,614
소 계 금 액(Sub Total)					4,614

합 계	4,614
부가세(VAT)	461
합 계(부가세 포함, with VAT)	5,075

Remarks
1. Cent OS의 경우 벤더가 없는 커뮤니티 Linux로 L1,L2 레벨의 기술지원만 가능하며, 벤더(L3 레벨) 기술지원은 불가 합니다.
2. 발주 시에는 반드시 고객정보(엔드유저명, 담당자, 연락처, Email)가 있어야 합니다.
3. OnSite 방문지원이 필요하실 경우에는 케어팩을 구매하셔야 합니다.
